Hi, Are you looking for a First HF Rig or a Backup Rig? I have the workhorse of kenwood available at this time.
The Kenwood TS-520s HF Multi-Band Station; Installed Options: External VFO for working DX/Split Frequency QSOs, Narrow CW Filter (useful for cutting out unwanted interferance), DC-DC Converter which allows EMERGENCY operation on +12Vdc, AC-Cord which allows Normal operation, External Speaker which enables you to hear on your "good" side, and Desk Mike to really get your signal out!. Operating and Maintenance Manuals Included. Rig was used this year at field day as our PRIMARY CW STATION with EXCELLANT RESULTS!!! The only reason I am parting with this setup is because I recently recieved a TS-140s and have to pay the XYL back :-) .

PRICE: $575 U SHIP

A copy of the "CB Rules" of part 95 is still required to be packaged with
every CB sold.

These rules don't clearly explain "why" you can't have a CB repeater. I
guess that it can be infered that repeaters are not used in a
"...private, two-way, short distance communications service..."

Curtis

Which seems proper since it involved tone signaling on 2M, then on CB.

Internal changes would have to be performed to the radio to make it a
repeater. Part 95 prohibits that.

Nope. Check Part 95 regarding tone signaling. It is permitted. In fact
I had a Heathkit CB transceiver that I built that had tone encoding
and decoding features.

)
)And, in fact, some of "us" are serving as VEs, hopefully also serving as role
)models that the branding iron doesn't necessarily come along with the ticket
)(farm animals, indeed :)).

(Hi Nancy! :)

Yup, we're VE's, ARRL section appointees, ARRL section managers (look
at Maine sometime...), there's even a female ARRL director (though I
can't remember what division she's from). I served as president of
my local ARC a few years ago, and had folks more worried about having
a newcomer as prez than they were about having a woman as prez! though
one of the old-timers did spend the coffeebreak time explaining to me
how he knew I'd be OK at the job because he had a number of "girls"
working for him back during the war (WWII it was) and that they'd been
much better at the job than the men in the office... :)

I, too, would love to get more wives involved in the hobby. And I'd
like to add to that -- I want 'em to get INVOLVED, not just talking only
to their husbands and nobody else! What good is the license if you
don't USE it??? I must know a dozen women in my area who are licensed,
but I only ever hear them on the air coordinating daycare pickup times
(when I hear them on the air at all). Yes, I talk to my husband on
the air -- but I don't disappear within a second or two if somebody else
comes on the air to say hello...

So we need more women like Nancy N1OEZ and Diana KC1SP and others who
aren't afraid of talking to folks on the air... :)

Dont remember exactly the Month issue of QST, but was in 1944 as I recall
when QST leaked info of how the process worked in the first construction
of the A bomb. It wasnt titled anything like that, as noone had ever
heard of such a thing at the time, but that one edition was quickly
pulled from all newstands etc but some of the subscribers saw it and
wondered what the reference was about. My mind is fuzzy now but I
remember reading about heating the filament of some kind of a tube,
I think it was a magnetron and using RF power to heat the filament
rather than AC or DC. Does anybody out there recall that????.
(who knows maybe Im drifting off into Alzeheimers or something).

> are the only way to communicate. I have nothing against code, go have
> fun. But what do you know about radio communications, ye who calls
> "CQ" on voice frequencies?

Listen to any voice call on HF and you'll hear the word "CQ". Unless,
of course, someone is specifically calling another ham by call that is.
This must be part of that extensive "radio knowledge" that falls into
your "I've forgetten more than you know about radio" category.

> "postings"? You're always spewing about things you don't know. You
> apply the word ignorant to others, but it seems you're just labeling

> Any tips?
>
> Scott, KF6FCN

Well, everybody is different Scott... but the way I made 20wpm was to set the computer programs (I used 3 of 'em) at 20wpm, and practice for 3 or 4 short periods per day... not more than about 15-20 minutes each time. There was no "hump" to overcome. Some say to copy a little "faster" than the test you'll be taking... but I'm not into overkill. :-)

Day 1 was pretty miserable, as you might guess. But I copied a little more each day. I also saw a pattern developing that I copied better in the mornings than in the evenings... which worked out well since the VE session I went to was always in the AM.

But the real "key" (I think that's a pun!) is practice, practice, practice... and then be confident in yourself when you go take the test. I'm a VE now, and I've seen way too many people fail because of nervousness... on both code and theory. Most VE's don't bite, we're not God (or the FCC), and we don't enjoy seeing people fail. Be calm, and if you miss something and get hung-up, try to recover from it as fast as you can and start copying again!

Its always great to see folks like yourself going for their upgrades... keep it up, and the very best of luck to you!

>out there? Maybe just collecting dust? Let me know if you
>have one relegated to the junk heap. Post here or via email
>yonnie@sisna.com
>
>Thanks, Jon

Seems innocent enough. We corresponded by e-mail and I told him
I had two Bearcat 250s that I had been planning on fixing but
wasn't really sure I had the knowledge so thought I would sell
them. He said all he could offer "sight unseen" was $20 each.

To make a long story short, I sent them to him for evaluation with
the understanding that he would send me a check after he got a
chance to look at them. That was last April.

Here is the e-mail I received from him just before I sent the
scanners to him. Pretty smooth, isn't he!

>Thanks for the update. Your plan is fine with me, and I will give you a fair
>price once I have looked them over. I am an honest person, and you know
>Jack, I have not been burned yet dealing with people over the net on a basis
>of mutual honesty.
>
>I'll be glad to get them, thank you.

I have sent e-mails requesting my money on May10th, June 11th,
and July 14th and got no reponse from him.

We live and learn. Just felt an obligation to share this with you.

16. GB2RS News 4th August 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-01 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <838953626snx@llondel.demon.co.uk>
Source record: 219818
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 4th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

A cheque for 11,000 was presented last week to the AMSAT-UK Phase 3D Fund by RSGB President Elect Ian Kyle, GI8AYZ. This is in addition to the 25,000 donation made to the fund by the RSGB last year. The cheque was accepted by AMSAT-UK secretary Ron Broadbent, G3AAJ, during the official opening of the AMSAT-UK Colloquium.

Almost 100 delegates from 17 countries attended the Colloquium - which took place from the 25th to the 28th of July at the University of Surrey - and, as usual, there was an interesting array of lectures. One of the speakers, Graham Ratcliff, VK5AGR, became the first recipient of the new G3AAJ AMSAT-UK Trophy which will be awarded annually for 'outstanding service to the Amateur Satellite Service'.

The RSGB's National Mobile Rally takes place at Woburn Abbey in Bedfordshire today, Sunday, the 4th of August. The event features traders, an RSGB book stall and membership information stand, and a direction finding competition. In addition, there are the attractions of the Abbey building and Wild Life Park. Doors open at 9.00am and full details can be found on pages 44 and 45 of the August edition of RadCom.

Those wishing to make nominations for the two Scottish Trophies - the Jack Wylie Trophy and the Jock Kyle Trophy - should note that the deadline is the 14th of August. Nominations should be sent to Tom Menzies, GM1GEQ, whose address is correct in
the RSGB Call Book.

Meanwhile, the nomination deadline for the G5RP Trophy is the 30th of August. Nominations should be sent to RSGB HF Committee, care of Fred Handscombe, G4BWP, whose address is correct in the latest RSGB Call Book. Full details of these trophies can be found in the July RadCom.

The RSGB's Repeater Management Group would like to invite any interested group to apply for a Notice of Variation to construct, install, commission and run a 2 metre FM voice repeater to cover the North Worcestershire and South-West Birmingham areas, allowing coverage of the motorways and trunk routes. For application forms and guidance notes, please write to the Repeater Management Group, at RSGB HQ.

And the Repeater Management Group would also like to hear from all amateurs who regularly use a 23 centimetre voice repeater, especially when mobile. The group is interested in compiling sufficient information

to enable it to forward plan the system, and help to increase activity. Please send details of how you view your local 23 centimetre voice repeater coverage, the equipment used in your installation, and any information you think could help future repeater planning. Write to Ken Baker, G3SPX, RMG Publicity Officer, 12 Woodlands, East Ardsley, Wakefield, WF3 2JG.

The 23cm repeater, GB3BH at Bushey Heath in Hertfordshire, is now back on the air in beacon mode only. A 20 second digitally recorded message is being played on the output frequency of 1297.000 MHz. It is hoped that the repeater will be fully operational by the end of this year. For more details contact Dave, G7LXP, whose address is correct in the current RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Fiji, I5JHW will be active from next Thursday, the 8th, for six days. The callsign is expected to be 3D2HW. Operation will be on CW and SSB on all bands from 7 to 28MHz, but primarily CW on 14,022kHz using 100 watts and a vertical antenna.

From Micronesia, DJ9HX will be operational as V63CO from the 10th to the 14th of August, from Truk Island which has the IOTA number OC-011.

And Scottish islands are to be activated by G3TQQ, as GM3TQQ Portable. He will be on Arran from tomorrow, the 4th, until the 7th; and on Great Cumbrae on the 9th. These islands count as IOTA EU-123. He may go to Gigha Island from the 7th to the 9th. This is EU-008.

Now news of special event stations:

Today, Sunday the 4th of August, the North Cheshire Radio Club is operating three special event stations at the Guide Association 'Voyager 96' International Camp. This is taking place in Tatton Park, Knutsford, Cheshire and is being attended by some 700 guiders from all over the world. Operation is on all bands from 160 metres to 70 centimetres. Look out for their callsigns GB0GG, GB1GG and GB0VGA particularly on 3.645, 51.450, 70.450, 145.450 and 433.450 MHz. Schedules can be arranged with Gordon Adams, G3LEQ, on mobile 0973 368073 at the camp site.

Next the Rally News:

The GB3WD Car Boot Sale takes place next Sunday, the 11th of August, starting at 10am. The event takes place at Sparkwell Wildlife Park, Plymouth. For more information telephone 01752 837319.

The Flight Refuelling Amateur Radio Society Hamfest also takes place next Sunday, the 11th. The event takes place at the Flight Refuelling Sports Ground, Merley, Wimborne, Dorset and doors are open from 10am to 5pm. Attractions include a bring and buy sale, craft exhibitions and field events. Talk in is on S22. For more details telephone 01202 691021.

The Red Rose Rally takes place on Sunday the 18th of August at Horwich Leisure Centre, Church Street, Horwich, near Bolton. Please note that the location is just off junction six of the M61 and not junction eight as stated in August RadCom. Doors open at 11am and 10.30am for disabled visitors. Features include a bring and buy sale, special interest groups and an RSGB stand. For further details telephone 01204 62980.

The Amateur Radio Caravan and Camping Club's next rally takes place near Hereford from Friday the 23rd to Tuesday the 27th of August. Telephone 01462 811208 for more details.

Now for the contest news:

Today, Sunday, the 4th of August, the RSGB's second 'ROPOCO' contest takes place from 0700 to 0900 UTC on 80 metres CW. The rules can be found in the September 1995 RadCom.

The European DX contest takes place from zero hours on Saturday the 10th until 2400 UTC on Sunday the 11th of August on CW. Brief rules can be found on page 23 of the August RadCom.

There is no solar news this week owing to the GB2RS script being produced early. This was to avoid delays caused by the backlog from the recent postal strikes. From next week the normal GB2RS schedule will be resumed. Next week's GB2RS will include two week's propagation data. Note that this week's propagation information will be on the RSGB's Internet site by the time this bulletin is read. The address is 'www.rsgb.org.uk'

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa India and M1 Alfa Romeo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Foxtrot series.

--
GB2RS is prepared by the Radio Society of Great Britain.

>work the contest, I put up a 30 element 20 meter
>beam, I visited W1AW

OKAY Burt how does this sound.....

My family worked this country, my city bought
that rig, my state got its Extra, the whole
country is going to work the contest, the whole
flipping world put up a 30 element 20 meter beam.

This is a hobby of individual accomplishments.
Many individuals in this hobby are not keen on
group activities. As you can see most of the "I"
things you listed cant be done as "WE" things.

>I work at.....etc etc etc. The only time they say
>"we" is when they
>really mean "I."
>In a contact see if a ham E V E R asks YOU
>about Y O U .

As far as the YOU thing, we all know what YOU are.

Sincerly
Pat N0WCG

I had to set up a temporary 900 mhz wavelan system in an office window
while we waited for them to finish building the roof and give us access
to it, and it also had the 'low E' glass on it.

I found I could put a corner reflector in the room, spaced off the glass,
and get usable signals through it. But it took a lot of fiddling. We had
to experiment with how far off the glass to space it (so the reflections
nulled I assume) and then mount the whole thing with homebrewed hacked up
styrofoam spacers and duct tape to hold the antenna 'just so'. Then we
found if you walked around the room, the reflections out the side of the
corner reflector bounced off you and back in and messed things up, but
some aluminum foil on the open sides (and more duct tape) cured that.
Pretty *ugly*, but it worked until we could do the proper install on the
roof.

Attenutation wise, I'd guess 10 db also, we were running over a 1.5 mile
path on gear rated for 3 miles so it couldn't have been too high.

Like they said on the duct tape commercial on PHC last week..."Duct tape.
When you can't get the job done right, get the job done. " :-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 AUGUST AND FORECAST FOR 02 AUGUST - 04 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 31 Jul
Daily Proton Fluence >1 MeV: 8.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.5E+05 (normal)
X-ray background: A7.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Aug 03 Aug 04 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Aug: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 31 Jul
Learmonth 11 3322 3322
Fredericksburg 12 19
Planetary 15 14

Observed Kp for 31 Jul: 3224 4333

2B. MAGNETIC FORECAST
Date Ap Conditions
02 Aug 15 Quiet to unsettled
03 Aug 10 Quiet to unsettled
04 Aug 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
01 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
02 Aug Normal Normal Normal
03 Aug Normal Normal Normal
04 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
01 Aug 11

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values with night-time spread F.
Townsville, Sydney and Hobart: Near predicted monthly values.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
02 Aug 10 near predicted monthly values
03 Aug 10 near predicted monthly values
04 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

I recently bought a TS130, and already own a TS820.
Only the TS820 has a CW filter.

The pictures in both manuals show CW filters that look similiar
in dimensions, but different numbers.

Can one fit a TS820 CW filter into a TS130?

If not, where can I get a TS130 CW filter, and how much does it cost?

>
> Jake Brodsky, mailto:frussle@erols.com

Actually, it might be a good product for repeaters with remote recievers. The bearing and signal strength could be encoded on a low data rate PL/FSK signal on the reciever link. Then this would all be collected at the main transmitter and the trig done to give you a exact latitude and longitude of the transmitter in question.

The lat/lon could be spit out as voice at the tail of each transmission. Certainly would discourage any fixed repeater jammers. I don't think it would be that cheap, but for the repeater with all the bells and whistles it might be a good add-on.

I've seen some Army contracts (and they may be real now) for systems like this. The Army wants to locate small forces who often use handheld radios and operate guerilla style. Of course, there objectives are to automatically steer a mortar at the offending operator. Actually, this might be useful in amateur radio also ;-)

> specs. Has anyone actually performed an elevation beam pattern measurement on
> either of these brands?

Our Club repeater was treated to a brand new Diamond in the summer of
.. I think 1992. Worst damn drought we ever had. Sucked the water
right out of the air, it did. We know that's what caused our drought
as the next year we had to replace it due to high SWR.

In taking it apart, we found that the clips used to keep the different
internal parts together were steel. They ended up being balls of rust.
We then determined that the foam used was open cell. This allowed the
water to be absorbed in to the foam ... which was next to the clips.

Irregardless of the RF pattern, it sucked water so bad that it ruined
the local farm economy. Backyard gardeners were heartbroken. We
went back to our Telwave.

This can be useful. I just bought a Diamond trunk lid mount for my
car (maybe three weeks ago). My wife can't understand why my car
looks better than hers. I just point to the rusted up screws ...
Diamond strikes again ... sucking up all the water so it never rains on
my car.

Hard to believe that products that seem well designed and marketed
can be so damn disappointing when actually in service.

>pointlessness. I miss the old days of the Rag Chewer's Club. I miss
>the variety of conversation. The bands are filled with inane and
>"hi-bye" contacts which last for over an hour.

How about non stop computer talk: my computer has this and does this
and is this fast with this drive and video... for hours! That's what
we get here in NY.

>even CW occupies bandwidth like any other AM signal. A look in
>my Webster's dictionary shows that the salient definition of
>'channel' is 'a narrow band of frequencies used by a radio transmitter'.

Really? I transmit on 7030Khz. You transmit on 7031Khz. How many channels
are between those two frequencies?

>On a 2m radio, the channel bandwidth is usually greater than 5KHz,
>but every frequency you operate on represents the center of a channel.

Really? What's "Channel 19" on your 2 meter radio?

A "channel" might be a 'narrow band of frequencies used by a radio
transmitted', but they are also a "standard", in the sense that a group
of people must agree on what "Channel 1" represents.

Since there is no such "standard" or "good amateur practice" which
dictates the definition of "channels" in amateur radio, your claim that
ham radio uses "channels" is demonstrably incorrect.

I see there is a course out (not mentioning any names) that teaches Morse code using speech association. Every character has a short phrase associated with it. I was listening to someone on a repeater the other day who was talking about it (I have also seen the ads). He said it is unbelievable! He was saying that after listening to the tape once, one could copy most of the characters. Is this a better method than listening to the characters over and over? Maybe I will order the tapes and check it out...

This is my first reply to a news group. What does this have to do with DX. I have been reading the rec.radio.amateur.dx stuff for about a week now and notice little DX info is reported here. Is this intended to be a source for DX? If not let me know so I can stop wasting my time. de Bernie, WR3E.

Your just an insecure snob who tries to put other people down to
make yourself feel better. I told you that I had a Degree in EE
not to boast, but to illustrate a point: that just because no-code
Techs don't know code, it doesn't mean we're ignorant, or don't know
anything about radio.

>

> is as ignorant as your postings seem to be, I somehow doubt it.

"radio operations"? Oh, you mean *CW* radio operations. As if they
are the only way to communicate. I have nothing against code, go have
fun. But your knowledge of radio operations seem a little thin too, ye
who calls "CQ" and "Qxx" on voice frequencies.

"postings"? You're always spewing about things you don't know. You
apply the word ignorant to others, but it seems you're just labeling
yourself.

>
> > Go fiddle with your key, asshole.

Clint, thanks, but I don't have any problems. Let's see if we can simplify
what is trying to be said.

Q. What is the range of a 220 HT ?

A. Three blocks. If you can hit a repeater, maybe 100 miles. If you can
hit a repeater that is linked to other repeaters, maybe three states.
But if there are no repeaters around that you can use, three blocks.

That's about a simply as I can figure out how to say it.

On July 5th, we moved to our own domain name at www.hamradio-online.com.
Unfortunately, the company we rented server space from announced on July 13th
they are leaving the web hosting business. Thanks to California Wireless, Inc.,
we have moved Ham Radio Online to their server which you can access for now
using this IP address:

http://206.13.40.11/

We are working to get the www.hamradio-online.com domain name redirected to the
new web site. In the interim, please use the IP address shown above. The new
web server is located in California's Silicon Valley so west coast readers
should see relatively good performance.

We also have begun adding August articles.

Why not ask that "old geezer" what he did during WWII or the Korean War? Ask him about his career, his other hobbies, places he's traveled. Ask him for his advice concerning problems you might have. He might be shy to talk about himself unless you urge him on.

Think of the "old geezers" on the radio as volumes of an encyclopedia just waiting to be opened. Each has expertise in their favorite area. Once you find that particular area you'll be introduced to things you'd never be able to learn otherwise.

Don't think for an instant that everything around you has always existed. Those "old geezers" were they guys who built the foundations of everything you see and own today.

But do remember Jake, that conversation is a two-way art; if you find the "old geezers" boring, it might be because they find you boring, and are trying to politely get rid of you by talking about health problems or other small talk (secretly hoping you QRT!).

> omne ignotum pro magnifico

Use the Icom BP-8, which is used on the IC 2AT/02AT HTs. It is a 7.2 volt high capacity battery. It will make your HT slightly longer, but the battery life will be much greater. Stay away from the BP-7. The HTX-202 does not like to be powered from 12 volt or greater batteries because the built-in zenar diodes will tend to overheat. If you must power the HTX-202 with 12 volts or greater, use the external power jack. Additional information can be obtained from an article available at:

Interesting point, Dana. I wonder, for the benefit of those of us who don't have
the Official ARRL Amateur Radio Handbook, could you please be so kind as
to provide us with a list of the CW channels for the amateur bands ?

I'm particularly interested in 20 meters, myself, so you could start with that
band if you like.

Yup, drifting does show our individuality :-)

Maybe we're not restricted to frequency channels by the license.
But many (most?) US amateurs do use small fm-only vhf and uhf sets
which do not offer tuning resolutions smaller than 5kHz. And where
available, a 12.5kHz step would add a few intermediate `channels'.

It's in the current ARRL Operating Manual (edition 5 of March 1995 on
page 17-154) that exact way, so I assume that the proposals have
now been accepted.

Several months ago, I ran across an article in a magazine about how one HAM was using GPS to help local Fire/Police departments zero in on call locations.
Well, I can't find the article, and I wanted to contact the author for further information on the system he's using. Does anyone have that information?
I can't remember the magazine. I thought it was either 73 or VHF, but both companies said they couldn't help me without an issue date or number.
What I need is this:
Who was doing the experiment? Where? and was there an address for him? If not, his callsign will do.
Please email me directly. I don't use the usenet very often anymore.

Thank You.

This is nothing new! Back in 1968 when I took my General exam, there was
a question about protecting yourself from high voltages while working on
them (I believe the correct answer was along the line of keeping one hand
behind your back while adjusting HV circuits) but one of the
multiple-guess answers given was "buy double-indemnity life insurance"!

>

Demographics doesn't indicate everything; take a look at who is writing
the articles in QST (or any ham magazine for that matter). Who is active
on the bands above 1296 MHz? (Most of the microwave ops I know have Extra
class licenses and are "beepers and contesters".) Who is spending the
most on equipment individually? (Most serious contesters have at least
2 or 3 towers of 70-100 feet with several stacked antennas, including
40 meter and in some cases 80 meter beams, and several radios on the order
of FT1000. Some have as many as 10 towers with 3X3X3 or 6X6 single-band
beams for each band.) (You think the suppliers want to see contesting die?)

>My Oxford Dictionary Of The English Language contains no mention of
>"frequency" in its definition of "channel."

You know, Jeff, I have an oxford dictionary too - and I think it sucks ;)

From Webster's Ninth New Collegiate: "a band of frequencies of
sufficient width for a single radio or television communication."

While it may not part of the traditional, old timer terminology, using
the word "channel" is not going to be the downfall of ham radio. All of
your radio communications that have a defined bandwidth limit can be
considered "channelized". We just don't designate channels with numbers
predetermine their location on the ham bands - wait...maybe we do. Most
local bandplans for things like repeaters will establish FM "channels"...
they don't call them channels, but that's what they are. Key up on a
'frequency' in between two of these established channels in a busy area
and see if you don't piss anyone off.

We (around here - I don't claim to speak for Hawaii) regulary use the
terms "co-channel" and "adjacent channel" when talking about certain
types of interference in the FM world.

I could not find a Webster's definition for "QRM".

Aloha :)

Sure seems kind of lame to me that a company would sell a radio that doesn't
cover the entire band right out of the box. (I know Icom, Kenwood and a few
others did this with their OLD technology radios... Covered 2 MHz.) It just
isn't excusable these days.

Of course, what could anyone expect? It's Radio Shack...

The program is called Ham University. I'm taking my first test on the 21st, and I was only planning on taking the novice and tech and the 5wpm test, but this progam has been so helpful(and I found out I was allowed to take as many tests in that one session for only $6.05), that I'm hopefully going to get my advanced. The program has a great lesson plan but is VERY time consuming to finsh it all. I've been at it non stop for about a week and am 3/4ths through it. Who knows, maybe I can go all the way to extra...Well, I really hope this proggie works out for you, and I hope you get over that 11wpm hump.
Take it easy.

>>they are afraid to use the term channel which is a perfectly acceptable
>>term according to the dictionary quote above.

>Sounds like either a poor definition or misapplication to me.

Misapplication by who? There seems to be a notion among the "we don't
have channels" hams that a channel has to be numbered or named. Since
"good amateur practice" requires that bandwidths be limited to what is
necessary, we almost always transmit in a channel...though we are allowed
to "dig out our channel" wherever we want, within the appropriate band.

The FCC board are political appointees of the White House, NOT the Congress.
As such, although they are (theoretically) responsible to Congress as a whole, they pretty much do as they doggone well please. Fairly much like all the current political appointees have done for the last four years, just before they all acquire a major case of amnesia when Congress asks them why they did what they did.
So don't be stupid enough to blame a Republican Congress for what the Democratic appointees are doing. Not only is it incorrect, it's indicative of the childish partisan finger-pointing that's been going on since 1992. It also accomplishes absolutely nothing, so save it for the political lists - not HAM radio.

Infantile partisan finger-pointing is NOT going to stop the FCC. In fact, it will only help lose our frequencies by embroiling the HAM community in useless argument. As such, useless argument like that will only keep us from battling the right people, the FCC.

Definitely make your feelings known on the issue to your Congressman, as well as the White House - both Clinton and Gore. But be adult enough to state your case clearly, plainly, BRIEFLY, and keep any personal petty little political biases out of your statement. Don't threaten anyone with your vote, either - that just relegates your letter into the bit-bucket.

Keep in mind, Clint, that there are lots of *OLD* HTX-202's floating around out there. I think *mine* may even be one of them.

The Zeners do indeed get warm but that's not the biggest problem. The trouble with the older ones is that those Zeners are located too close to the *output* transistors which may then overheat.

I've seen it recommended that you should install the belt clip whether you intend to use it or not, since it provides some extra heat sink for the Zeners, especially when running on automotive power (13.8 V).

All these good hints are nicely explained (along with how to tweak your HTX-202/404) at:

http://ourworld.compuserve.com/homepages/wa3rvt/htx-202.htm

DX LUGO AWARD

The "AWARD LUGO" is given free charge for the Group DX LUGO to all the radioamateurs and SWL,
(its size is of 44 X 32 cms., it's printed in lithography with coIours and its design was made
by people of the famous ceramic art factory "SARGADELOS")

"LUGO DX GROUP" issues this award according to the following rules:

1.- Contacts with Group members, except repeaters, after January 1st, 1983

2.- Contacts required are:
- Spain.....15
- Europe..... 5
- And DX..... 3

3.- The same station can be contacted in different band, but only one contact after 24 hours with
the same station.

4.- Applicants must send QSL or certificate list by one Radio Association QSL will be returned by
registered mail. FREE AWARD.

5.- SWL the same rules

83. FS: AC to DC Regulated Power Supply

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-01 00:00:00 UTC
From: aak@olympus.net
Message-ID: <aak-0108961100290001@papm016.olympus.net>
Source record: 219889
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,pnw.forsale,olympus.forsale,seattle.forsale.misc,sci.electronics.equipment,sci.electronics.components

I have the following for sale:

A Tripp-Lite precision regulated DC power supply. It converts 117 Volt AC power into regulated 13.8 Volt DC power.

The specifications on it say:

Precision Regulated DC Power Supply Model: PR-7 b
Output: 13.8 Volt DC 7 Amp
Input: 117 Volt AC 60 Hz
Fuse Protected
Low Ripple Fully Regulated
Electronic Overload Protection with an Instant Automatic Reset
---
It is brand new, never been used, and still in the original box. It comes with the original instructions. This is good for ham radio operators or any others that operate equipment that requires the use of regulated DC power from an AC power source. Delivered right to your door. Retails for 69.95. Sell for $50. Reply by e-mail.

Thanks
Tony Korolis

84. HamComm 3.0 software

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-01 00:00:00 UTC
From: dickrb@lsid.hp.com
Message-ID: <4tqj11$gop@hpcvsnz.cv.hp.com>
Source record: 219890

Greetings!

I need the address and/or phone number for HamComm software version 3.0
or later version. I have an hp-200LX and have been told that the
HamComm 3.0 handles tx/rx of AMTOR, etc.

Anyone have any experience with this s/w? Any info will be appreciated.

85. Macintosh & Packet?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-01 00:00:00 UTC
From: RFBG67A@prodigy.com
Message-ID: <4tqtki$954@usenetp1.news.prodigy.com>
Source record: 219891

I'm in the process of setting up a packet station, and if possible I would like to use an old Mac 512 KE. I just need to get a TNC and the software. I'm just using an old "Standard" 2 channel crystal radio which I want to set to my local HAM club's packet station, so for right now I'm not looking for anything fancy. If all else fails, I have an old "dumb" terminal which I can use instead of the Mac, but I am a long time Mac user, so I would like to use the Mac. (If need be I could upgrade the 512 KE to a Plus)
Thanks in advance!

Nah...it's just a sucker post based on generalities whose truth cannot
ever be determined but can be argued ad infinatum. What are we
supposed to do about it? Talk better? Talk about more interesting
subjects? It's like saying that music these days isn't as good as in
the old days, kids today have no sense of responsibility, today's EE's
cannot design analog circuits blah blah etc.. Don't waste time
getting into this kind of discussion. Do you think "Burt" believes
half the things he writes?

Yep. Just what we need - another CB band. For the first time in history,
the FCC has mandated that LICENSED GMRS Operators SHARE the same band
with unlicensed morons. There are no remedies for illegal operations
intentionally interfering with existing repeater systems in the FRS
docket. It's quite a ruling, indeed.

: I'm guessing between 5 to 10 dB.

I'm sure it depends on what kind of mirroring material you have. But
I can share one experience I had though with a pull-down mylar sun shade
on an office window.

With a midsized yagi set up inside the building and line-of-sight to a
hilltop radio at 904 MHz I couldn't figure out why signals were so weak
(~30 dB down from LOS values) and the antenna peak seemed poor and in
the wrong direction. Finally I realized that the shade was down and
pulled it up. Doing so restored the signal strength and made the
antenna pattern look correct once more.

It was a pretty dramatic difference.

> or other small talk (secretly hoping you QRT!).

Quite true Jeff. Conversation is definitely a two way street. However,
I base my experiences on many fruitless years of listening to HF activity.
If the problem was just with me, I'd hear some other interesting
conversations once in a while --but I don't. I don't hear those old
operators talk about their war experiences much. I don't even hear them
talk about older radio technology. I read more of that here on the net
than I hear on the air.

Apart from the radio geek stuff on the air (which is okay), the content
of Ham Radio conversations is pretty shallow. I could discuss lots of
things, as I'm sure most other "old geezers" (I apologise for the term,
I was foaming at the mouth at the time) can too. But we don't. And
I'm not quite sure why.

Could it be that we're so full of silly jargon that we simply don't care
to talk normally ("HI HI I still hear you through the Que Are Mary"
--ack ptooey ;) ? Could it be that personality and technical ability
are inversely related among the ham public as a whole? Could it be that
we are so enamored with the techniques of radio communication that we've
forgotton what to say? Is that why CB had to have its own silly code
jargon?

I've been a ham since 1975. I'm not a newcomer. Frankly I hear a
lot more foul-mouthed, empty-headed fools on the air than ever before.

It isn't just that the art of conversation on the air is not what it once was, I'm saying that even those folks who remember what it was like in the years past are not pulling their weight. It is a sad thing. Were it not for the interestI have for the technical side of this hobby, I'd have let my license lapse a long time ago.

From: ez071906@dale.ucdavis.edu
Message-ID: <4tqrst$d52@mark.ucdavis.edu>
Source record: 219897

I have an old National NCX-3 HF Radio that is having some problems. I just bought this radio and do not know much about it. One problem is that it only puts out about 50 watts at best. I thought this radio should be capable of 100 watts. ? Also when I use the CW key, it puts out much less power than when I am using the Tune function. Another problem is that when I key the CW key the sound wavers at first before setteling on a pitch. The sound is not real clear and it changes.

If you can help me with any of these problems PLEASE write me. Or if you can refer me to someone who can help that is fine too. Or if you happen to have a manual for this radio I could really use that also.

Okay, thanks a lot!

I have the Larsen KG2/70 on the rear window of my '94 T-Bird. Works pretty well, BUT.....

I run a Yaesu FT-5200, 50 W on 144 and 35 W on 440. When on high power on 144 and I'm using cruise control and I press the PTT sw, the cruise shuts down till I release the PTT. Sorta like pressing the coast switch.....

I talked with the Chrysler guys at Dayton and was told that the majority of problems are associated with glass mount antennae. I got a mobile radio installation guidline pamphlet from Ford and the list of antennae had the glass mount listed as least desirable.

OK, I also have a '95 T-Bird. I have an Alinco DR-610-T in it. Same power on 144. The antenna is a Larsen 2/70 NMO on a trunk lip mount. I don't experience the cruise problem.

Just my $0.02 abt glass mount antennae.....

I am currently using MT Gold which I obtained from ARRL. It is on one 3-1/2 floppy, and can be adjusted to 100 words per minute and also for the Farnsworth character rate. I am pleasantly satisfied with the MT Gold and would highly recommend it to anyone wanting to learn morse code. Cost was $30.00.

>docket. It's quite a ruling, indeed.

From what I understand, the only freqs shared are the interstitials.
So if someone has a repeater on one of those freqs, they're already in
violation.. And intentional interference is already illegal, adding an
extra couple of lines to the FRS writ would be redundant. (GRIN) Not
to promote abuse or anything, but even if someone was to operate at
+/-5 KHz instead of 2.5 by using ham or business rigs, it shouldn't
interfere at all since 5 KHz dev has been in use on the GMRS side for
quite some time now..
(Above statement supposed to reassure GMRS users not promote abuse
(GRIN))

I'm sure each community will have their nutt-cases, but over all, I
beleive that the majority of poor operators will stay away.

I just hope that the manufacturers of these new FRS radios allow for a
wide front-end, so that the 5 KHz GMRS users can be heard without
over-deviating and dropping/getting squelched out.

does anyone have a copy of a 'pseudo phonetic' alphabet they could post?
the entire alphabet is made from words that are NOT representative of the
sound of the 1st letter.

an example for 'k' is 'knife', spelled with k, sounds like n.

i need one of these alphabets so i can comunicate with unwanted telephone
solicitors.

thanks in advance,

mark, KB9NYF

>set up this rule so that people would not make CB repeaters.

You could also use PL since continuous, sub-audible tones are permitted
on CB. We, as hams, don't normally use PL for sel-calling but on CB it
would probably do the job.

My question would be: Is adding a PL encoder to a CB considered an
internal transmitter modification? If so, adding PL would void the type
acceptance.

Only the manufacturer (usually the holder of the grant of authorization)
can make modifications to a type accepted transmitter. FCC approval is
required for any of following modifications:

- The addition of any accessory or device not specified in the
application for type acceptance and approved when the type acceptance was
granted.

- The addition of any switch, control, or external connection.

- Any changes in the radio that change the number of channels (freqs),
modulation level, transmit power, etc.

Seems like adding PL would be prohibited by the first two items. I guess
the PL encoder would have to be externally connected (like via the mic
connector, inline with the mic).

Adding PL decode to the receiver audio system would probably be
considered a receiver modification that you could get away with. Though
it would probably be "legally safer" to use decode through an existing
external speaker jack.

Thanks for the post, Tom. I built a K8DTS HANDI-finder in about
an hour one day when my company was experiencing interference
in the form of a steady carrier near 152 MHz. Jumped in the car and
found the stuck microphone 6 miles away. It really does work!

Dialiing a number such as 1-900-EAT-BRAN would be plain silly. I
don't think any ham in his or her right mind would call a 1-??? number.
I'm pretty sure that ordering a pizza isn't going to harm anyone in the
long run, since they usually take only a couple of minutes.
The way I see it, repeaters are there for hams to use, and unless
told otherwise by the owner or other hams, they can be used in any way
that does not explicitly break the FCC laws or any sort of "moral" laws,
as in dialing long distance numbers or such. If the owner DOES have a
problem, then that should be addressed to the user, and it should stop
there.

> such dangerous statements to others.

As a pilot let me interject a bit more common sense in to this
navigation thing: The key is not to rely on any one piece of
equipment. That's it. The hazards you cite can be applied just as
easily to the almanac and sextant. You'll be in the same amount
of trouble if either one of them washes overboard too!

The key is knowing and using more than one navigation system at a
time. Which ones? How many? That depends on what degree of
comfort you're looking for. I can fly my airplane using dead
reckoning, an NDB, GPS, A VOR, assistance from air traffic controllers,
or I can just look out the window and read the name on the water tower
I see below me. I have lots of options. I'm not obligated to
use any one of them over another. The thing is that I always use at
least two or three of them at any given time.

I call that prudent judgement. Neither system depends on the other.
They are good backups to one another. The objective is redundancy,
not battery phobia, being washed overboard, or physical damage.

"Beware of the massive impossible!"

109. Maryland-DC QSO Pty Anncemnt

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-02 00:00:00 UTC
From: eab@VOA.GOV
Message-ID: <DvJBqG.EEw@VOA.GOV>
Source record: 219709

The Antietam Radio Association presents the Maryland-DC QSO Party on
August 10 1600Z to 0400Z August 11 and 1600Z to 2359Z August 11, 1996.

Phone & CW. CW QSOs in CW Bands only. Stations May be worked once
per band using each mode. Only Single operator stations are
permitted outside the Maryland-DC Area.

AWARDS: PLAQUES to: (1) High Scoring Single Operator from MD-DC
(2) The Top non-MD-DC Single Operator Station Entry
(3) The MD-DC area club with the high scoring entry
CERTIFICATES to:
(1) All with 50 or more QSO Points in Entry !!!!
(2) The 10 Best MD-DC Single Operator Logs
(3) Best log from Each U.S. State
(4) Best Log From Each Canadian Province
(5) Best log from each DX Country
(6) Best MD-DC Mobile Entry
(7) Best YL Entry from MD-DC
(8) High QRP Entry from Each State
(9) Best Novice/Tech Entry from Each State

The Rules
1. Non MD-DC Stations must work only MD-DC Stations. MD-DC Stations may
work anyone.

2. Portables and mobiles that change counties during the test count as a
separate station in each new Maryland county of operation. Sorry, no packet
or repeater QSOs allowed. QSOs part of a regularly scheduled net are not
allowed.

3. Exchange: QTH & Major Category of Entry. QTH is County for MD-DC Stns.
Use U S State, Canadian Province or DX Country as appropriate for non MD-DC
stations. MAJOR CATEGORIES are CLUB, QRP, MOBILE, Novice/Tech.
and STANDARD. Stations should send the major category that reflects their
HIGHEST POINT VALUE.

4. Suggested Frequencies (mode appropriate) 3.92 7.23 14.26 21.37
28.38 50.15
Simplex 2 mtrs & above
And 3.643 3.701 7.035 7.126 14.04 21.115 28.04 28.115 CW
is encourages and suggested use on odd half hours
examples 1730 1930 2130 etc.

5. SCORING For Non MD-DC Stns Each MD County + Baltimore City & DC are
Multipliers (25 possible)

For MD-DC Stns The basic 25 above + each of the other 49 states + each Canadian Province +each other DX Country (rule change this year!)

Multipliers may be claimed one only. They do not repeat on each band.

6. QSO Points: 10 points for CLUB Stn QSOs
5 points for MOBILE Stn QSOs
4 points for QRP Stn QSOs
4 points for Novice/Tech Stn QSOs
3 points for CW or RTTY QSOs (RTTY & CW same mode for scoring)
1 point for any other valid contact (Voice, ATV, etc.)

HIGHEST SINGLE POINT VALUE APPLIES (Example Contact with a mobile club station is a 10 point QSO.

7. Final Score : Add up QSO Points and Multiply by the total Multipliers

8. Send Logs with S.A.S.E. by September 10, 1996 to:

Antietam Radio Association (W3CWC)
P.O. Box 52
Hagerstown, MD 21741

Hope to see you in the test. DON'T FORGET THE AUTOMATIC CERTIFICATE TO ALL ENTRIES WITH 50 OR MORE QSO POINTS IN ENTRIES!

73,
Ted Lawhead WA3AAT Chairman (WA3AAT@N3QKP.PA.USA.NA)
Page Pyne WA3EOP Co-Chairman (WA3EOP@N3QKP.PA.USA.NA)

Since CB transceivers must be type-accepted, and the receiver contains
an oscillator whose emissions must be below a certain level, one wonders
whether even mucking around with the receiver risks voiding type-acceptance.
(This query is not related to your idea of using two xcvrs back-to-back
to get around performing any internal changes.)

Scott,

I agree with Stan's approach (copying at higher speeds. It worked fine
for me. The key (no pun)
is to get used to hearing the letters and spaces at much faster speeds
than your 11 wpm. You don't indicate how you're copying 11 wpm -
whether it's 11 wpm sent with 20 wpm characters and exaggerated spacing
or whether it's a true 11 wpm. I hope it's not the latter. Even if
you have trouble, listen to the 20 wpm characters.

I would also suggest, if you have the equipment, that you get on the
air with that Novice license and make some contacts. You'll find your
11 wpm to be a very good basis for CW contacts in the Novice bands, and
the practice copying call letters will greatly improve your numbers
and random letter ability (both are great in a crunch when something
seems to come out of the blue on a cw test).

Best of luck to you!

Take it from an HTX-202 owner. I saw the finals fry twice because of
the stupid Zener problem. I would be using the HT on perfectly normal
conditions, chatting with 5 W into a local repeater with a very nicely
matched ant. when all of a sudden you'd lose all power. I'd heard
rumors about this stuff, and my 202's were circa 1995. They were not
old as you might say. This has also happened to a friend of mine,
locally. My favorite point of this whole deal was that A) because of my
service warranty, every time this happened I got a new radio and B)
twice the salesman at RS asked <and I quote>, "What's the matter, are
the batteries dead or something?" Now if this was actually designed by
hams (Maxon) how come they don't even know how to make a radio with good

finals, never mind image rejection. Through it all, I now have a 202 that I've had since last summer - with no problems. This is also because I've become a bit more cautious. What is also interesting is that I also own an Icom W21AT and that little thing will get so hot, but that is like normal operating temp. because of the small heat sink! I really do like the HTX-202. It's a no-nonsense radio, that besides this, has been a really reliable rig. BTW, I would not worry about the BP-8's. Many other hams use them, and I've never heard of this happening while using one, but that could be just out of luck?!

Have fun and 73,

>whistles it might be a good add-on.

Surprisingly, perhaps, it would normally work better on *mobile* jammers
than on *fixed* jammers. The bane of all direction finding systems is
multipath. That can cause the DF gear to give a reading *anywhere* around
the compass for a given station in a given multipath environment. But
if either the DF receiver or the transmitter being hunted is mobile,
then the multipath is not fixed. It jitters with an *average* direction
which will be closer to the true bearing than if the DF receiver and
hunted transmitter were both stationary.

If you hunt with a doppler DF outfit, you'll immediately notice this
effect. When you are stationary, you get a rock steady bearing, but
very often it is the *wrong* bearing. When you get in motion, you
get a scatter of readings, but their average tends to be the *true*
direction of your target. This works just as well if the target is
moving and you are stationary.

I've often thought of equipping several repeater sites with doppler DF
gear and linking them together via packet to form a tracking network.
Resolution isn't really good enough to get a hard point triangulation,
but at least it would give the mobile hunters a starting point.

I understand that some mobile hunters can link together using APRS
to share their own locations and the bearings that they are presently
receiving on the target station. I even seem to recall a QST article
about a system to resolve those reports into a rough lat/long solution
automatically. The technology is out there, it is within amateur reach,
but it is far from perfect and precise. You still need some mobile
hunters to pin the source down precisely.

>
>Jeff KH2PZ / KH6

Actually, internal changes would *not* be required. Haven't you ever seen an ad hoc repeater made from *two* radios? A couple of *unmodified* HTs can make an expedient repeater by simply connecting their earphone and microphone connections to a suitable controller. Someone advertises just such a controller in the ham magazines. It would work using two unmodified CB sets too. (Of course you'd better plan on running split site, the duplexer you'd need would be killer if the split were to remain inside the CB band.)

The FCC doesn't allow repeaters on CB because they don't want repeaters to be used on (Class D) CB. It isn't because building such a repeater would require voiding the Type Acceptance of the radios used.

>fact that it is bent aroud over its length affect it's performance
>over one which is in a straight line..
>Any comments would be much appreciated.

John, for *reception*, thin copper wire antennas are fine if they
are strong enough to span the needed spans without too much sag.
For *transmission*, where antenna currents can be high, heavier
gauge wire is needed.

Folding the antenna around will affect its pattern. Depending on
how it is folded, what directions you want to hear, and more
importantly what directions you *don't* want to hear, it could
be good or bad. The main thing a HF antenna buys you is the ability
to *null* undesired signals and noise. Signals on HF aren't that
weak, but noise and interference are high, so the best antenna for
reception is the one that offers the best null in directions other
than the one in which you are listening.

An antenna that is randomly strung will have an unpredictable
pattern. It *may* be just what you want, or it may not. An antenna
that is deliberately oriented gives more predictable performance.

In the movie "Independance Day" you see ham radio operators (really military personnel) using CW to save the world. It was after the aliens destroyed Earth's communications, so they used the hams to convey the battle plans.

The only problem was that they were using straight keys-at 35 WPM! I wish I could do that!

Also, shouldn't they have been using MARS/CAP???

Oh well! What can you expect from Hollywood? At least we saved the world...

HURRICANE FREQUENCIES
(Unless otherwise noted, times are UTC, freq in kHz)
Revised August 1, 1996

The following high-frequency hurricane season intercepts have been gleaned from numerous sources. Times and frequencies are subject to frequent change, and are listed for reference only. Beginning this issue, the list is a collaboration between Bill Snyder of California and Roger Pettengill of New York. This list has been published monthly during hurricane season since 1991.

If you copy this list, credit the authors. Do not remove update request and e-mail addresses. This is the only way we can keep the list updated! Thank you all who have so generously contributed information. Enjoy!

Bill Snyder AA6KC
Roger Pettengill

Hurricane reconnaissance aircraft (hurricane hunters) now operate primarily

on US Global High Frequency System (GHFS) frequencies. Best frequencies to

monitor are those guarded by MacDill and Ascension. After initial contact on one of the published GHFS frequencies, listen closely for them to switch

to a non-published frequency to pass traffic. Aircraft call signs are "GULL-nn" or "TEAL-nn" (where nn is a 2-digit number), and "NOAA-42" and "NOAA-43." The GULL and TEAL aircraft are type WC-130 based at Keesler AFB, Biloxi, MS. The NOAA aircraft are type WP-3D based at MacDill AFB, Tampa, FL. Look for the new NOAA Gulfstream IV-SP (tail number N49RF, call

sign "NOAA-49") to make its debut this season.

Whenever a hurricane is within 300 miles of land in the northern western hemisphere, the Hurricane Watch Net is operational on 14325. The Hurricane

Watch Net provides communication between the National Hurricane Center and the affected areas.

During a communications emergency, W1AW transmits special bulletins by voice at hh:00, teleprinter at hh:15, and CW at hh:30. Frequencies are:
Voice 01855 03990 07290 14290 18160 21390 28590
Teleprinter 03625 07095 14095 18102.5 21095 28095
CW 01818 03581.5 07047.5 14047.5 18097.5 21067.5 28067.5

The National Institute of Standards and Technology broadcasts storm warnings on 2.5, 5, 10, 15 & 20 MHz AM according to the following schedule:
WWV hh:08 Covers Atlantic and eastern North Pacific
WWVH hh:48 Covers Western, Eastern, Southern, and North Pacific

---

Globe Wireless broadcasts weather information, forecasts and bulletins in CW and SITOR modes on the following time-slot schedule:

NOTES:
1. Offset tune 2.2 kHz for FEC broadcasts in FSK or LSB
2. Normal hurricane season extends 01 June to 30 November

One of the most interesting WWW hurricane sites for the technically inclined is the Atlantic Tropical Weather Center page. It is maintained by

Eric Blake, an atmospheric sciences major at Northeast Louisiana University. URL is http://banzai.neosoft.com/citylink/blake/tropical.html.

Many of the products referenced in this bulletin can be accessed from his site, including weather forecasts, hurricane reconnaissance flight data, satellite weather images, and more. This site links to a boggling array of

raw data and information.

You really can help keep this list current by sharing your additions, corrections and deletions. Cite source and include detailed info. Submit to either of the following:

If you do not think hams talk only about themselves make a contact
and say nothing about yourself UNTIL ASKED. You will hardly ever be asked.
Try it.

I believe everything I write 100%.

It what way will anything I have said be forbidden on the air?
Read "Hitlers Willing Executioners", a best seller in this country.
You will read that ordinary Germans made the holocaust possible.
You will read that even after Himmler ordered the killing of Jews to stop
ORDINARY Germans, like you, kept killing and torturing.

You want to know what the other guy thinks about YOUR station.
You do not give a damn about his station.
You proved my point.
Thank you.

Spoken like a true couch potato sailor. Don't *ever* go to sea with that type of attitude. When planning a transoceanic voyage you have to assume every piece of electronic gear will eventually get wet either due to condensation or breaking seas tossing a couple tons of sea water over the deck and into the cabin. Assume battery operated gear will also fail just when your life depends upon it.

You'd better take along a sextant, the Nautical Almanac, and the Sight Reduction Tables, and know how to use them. Don't even depend upon a handheld nav calculator. It will eventually get dropped into the bilge.

It's fine to be a danger to yourself, but do think twice about making such dangerous statements to others.

> Navigation can now be a completely
>passive thing.

You'd best stay on land.

The Select-A-Tenna works great for AM band. It will let you to null out strong local stations, which allows you to receive distant stations clearly. It also boosts reception.

I ordered mine from the C. Crane Company (they have a www adress) for around $80.00 I think.

Thank you from every lady who may have thought about getting into
the hobby!!!! I really think you men should think a liy\ttle bit more
aout what you say ! why cant women be as smart as you are Ive already
built antennas for my equipment and I have had come ons from the guys
like you .We are all tired of people like you putting us down If you
listen and traet us with equality you just might learn something
sometimes you pigs really show your intelligence here .Comments like
your is what makes me totally sick ! women are as smart as men and our
brain capacity is larger thats why we can do anything that you guys can
do! I passed my test THe first time when I know 2 gentlemen who failed !
Thanks alot ......

Montauk Point, NY

The Long Island DX Assc. will operate the special event station
AC2P/200 from the Montauk Point Lighthouse located on the eastern
tip of Long Island (IOTA NA-026, USIA NY03S) from 1400z August 3
to 1900z August 4, (National Lighthouse Day) to celebrate the 200th
year of the Lighthouse.

Listen on 7.260, 14.260 and 21.260. CW as announced.

A color certificate will be available with an SASE for contact
with AC2P/200. QSL to Rich Tygar AC2P, CBA.

Also see August 1996 QST pages 26 and 97.

Thanks from every woman that might have read your message . people like
you should go back to the CB freqs. YOUR intellegence is showing . So
you have this attitude about women ? I do not look like a dog.
Shovenistic men like you hit on women like me. We think your also not
loved .Women are tired of you who think this is some kind of boys club.
Women can do anything they put thier mind to . I passed my test the first
time I took it . Men I know havent passed it yet , Ive built antennas
For my station and if I dont know something I dont post it in a newsgroup
I find it for myself .
OPEN YOUR MIND NOT YOUR MOUTH !!!

Well, far be it from me to interrupt the coax pinning discussion, but here's a repeat of the simple DFer gadget article that I posted a while back... The more folks have some DF capability (even a very simple one), the less we'll have to put up with jammers.

```

!-_ e !
2N2222 ! gnd
gnd

This is a DF circuit based on the article by K8DTS in May, 1993 QST. I recommend reading that article for hints on circuit operation and use. The 2N2222 can be any general purpose NPN transistor such as 2N3904, 2N4400, etc. I used a 2SC945 which is as common as dirt in old Japanese transistor radios. The 1N914s can be any low-capacitance signal diode, 1N4148 being an acceptable substitute. Don't use recitifier diodes. All capacitors are ceramic disc or monolithic, nothing real critical here. You might want to play with the .047 cap and the two resistors on the 555 if you'd like a different tone. See 555 apps notes. The switch is a DPDT w/ center off position. Set to "df" position for direction finding, "off" to shut everything off, "stdby" to connect one antenna continuously to the radio for just listening. The battery is the rectangular 9V transistor type. For antennas, I used two half-wave dipoles mounted at opposite ends of a half-wave-long stick, with the circuit board mounted in the middle. Make the two antenna coaxs the same length for proper phasing. The radio coax length is not critical. I just made mine long enough to reach the radio on my belt, with the stick held up at arm's length. Ground all the coax braids at the circuit board. Provide some sort of strain relief for the coax. You might want to put a .001 capacitor in the coax to the radio for DC blocking.

I've successfully found foxes using this circuit and an IC2AT, so it works!

>duck antenna. Can make the uProcessor go wacky.
>
Ahem ... that has not been my experience. I've run 5 watts using the HTX-202 and rubber ducks, stubby ducks, quarter-wave whips and 5/8-wave whips with absolutely no problem. The only time the processor went nuts was when I had the rubber duck right next to a metal window-frame. I suspect a lot of RF was reflected by the frame back at the radio. Turning the radio off and back on fixed the problem.

I have also had no problems leaving the external battery connected to the radio when operating from an external 12-volt supply. The rig does get a bit warm when transmitting at max power output.

As soon as the 11 year cycle picks up again and we get a few more
DX-peditions, I expect that your moisture problems with the Diamond
will be a thing of the past. What hasn't been recognized by most in
the scientific field is that the ozone hole gets larger whenever a
DX-pedition happens. This is a result of all those two hole Alpha
amps in use. It really has nothing to do with CFC's and the like.
This won't help your drought problem, but at least your repeater will
work better. Just have to have your priorities straight!

Hello All,

I am having terrible troubles trying to cure the RFI/EMI in my both my HF and VHF radios in my 1985 Toyota Pickup...22REC engine, EFI. I have tried several things:

replacing spark plugs & wires, rotor cap and button...trying capacitors on the alternater, putting RF chokes on the electric fuel pump wires, ensuring that there are good grounds everywhere, grounding the fuel pump wires....

I am about out of ideas.....anyone have any suggestions??

First of all, the conversation had nothing to do with sailing, or flying. The person proposed moving the VOR and TACAN navigation tools to the Ham bands. My response should have been taken in that context.

Would you fly using Amateur navigation tools? Would you sail using Amateur navigation tools? Would you trust a passive GPS only solution over a series of Amateur sites? Let's get into perspective here.

I've crossed the Atlantic probably 100 times. You fly east. With a 707 you can fly direct by just noting the position of the Sun. You can shut everything else off. Flying over land above or in the soup is no different, it's all based on time, speed, wind and heading. When the clock strikes 3pm, you pull the engines back to idle, and somewhere below you is Chicago... The need for precision navigation in flying and shipping is merely a fuel and coordination problem. Once the Free Flight rules go into effect, the pilots workload will drop tremendously. They will use TCAS, GPS, and Radar to do their job. There's even a nice ground radar device that shows segments of ground altitude. The segment being red means the terrain is above, yellow means it's within 3kft, and green means well below. Free Flight will allow the airlines to launch and fly anywhere they want to get to their destination. No longer are they restricted to an 8 mile wide air route with hundreds of waypoints and restricted to an altitude. Precision will just go away outside the airport zone. DGPS will be used to land. There just won't be any secondary tools outside of the useful beacons, and INS.

I am a SW listener so I don't know much about radio/tv vacuum tubes.

My mom moved and found in her attic boxes of vacuum tubes. She wants (and
I want) to find out what we've got. Are these things useful now? Will
somebody want to buy them?

label tube approx. quantity
Raytheon 6Q7 52
1U4 30
1LE3 8
7X6 60
7X7 16
6F6G 55

Sylvania 50A5 14
14B6 5
14A7 5
35Y4 18
35L6/GT 27

Ken Rad 1U4 10

Phillips 14A7 ??

Philco 7B7 ??

"vacuum can tubes" that's all I know how to describe them
Ratheon with the numbers: 6C 8762 A LE4 1005 CD1005
JAN-CRP-1005 VT195
I have about 35 of these

There are another 9 boxes of tubes I have not even looked at yet.

Help!!

>>"...private, two-way, short distance communications service..."

>Internal changes would have to be performed to the radio to make it a
>repeater. Part 95 prohibits that.

Internal changes to a tranmsitter....that's right. But I bet I could make a repeater station out of two Cobra 148 GTLs without having to take the covers of either one (I beleive I still have one of those in my garage - which is why I use that model as an example). To makes thing easier, I could use any radio that covers 27 MHz for a receiver - which I can modify all I want.

I think the only thing that makes a CB repeater illegal is that, under interpretations of part 95, it would be considered radio remote control of a CB transmitter - which is a no-no. But in addition there is nothing in part 95 that "authorizes" repeater stations. Under amateur and GMRS rules, repeaters are specifically defined and specifically authorized for use in those services.

Propagation Forecast Bulletin 32 ARLP032
From Tad Cook, KT7H
Seattle, WA August 2, 1996
To all radio amateurs

SB PROP ARL ARLP032
ARLP032 Propagation de KT7H

Last week in ARLP031 we reported the solar flux on July 24 was
66.7. It was really 66.2.

Solar activity has taken a jump this week, due to the return of
solar region 7978. The average solar flux was up about 10 points,
and the flux is peaking now above 80.

Geomagnetic activity is also up, with the K index reaching four on
July 29 and 31.

Watch for solar flux to stay around or above 80 for the next few
days, dropping down below 70 by August 9. It should rise up to 70
around August 22.

During this period 20 meters should be the best band during the
day, and 40 meters at night.

Sunspot Numbers for July 25 through 31 were 0, 11, 13, 16, 22, 28
and 34, with a mean of 17.7. 10.7 cm flux was 68.2, 70.2, 73.3,
75.5, 77.9, 79.9, and 80.2, with a mean of 75.

I am a little behind in my reading, sorry if this has already been
answered. As I recall, the civil case included issuance of a
restraining order. Violation of the restraining order is a criminal
act. That could have put the guy in jail. Real unfortunate. Until the
fuss started, he was a good control op with a great set of pipes. He
should be doing commercial voice overs. Oh well . . .

I used VersatermPro for most everything serial on my Mac. ZTerm works good
also. There was a shareware dedicated packet program out. Forgot its name.
Same guys did Savant, a commercial KISS-mode Mac AX.25 program. And there
still might be a version of NET_Mac running around that runs on the 512k.
Upgrading to 1M or more and SCSI isn't a bad idea.

(complain mode on)

Though I frequently disagree with Burt's point of view (not to mention
his presentation) I think he has a *very* valid pet peeve here. The
art of conversation in Ham Radio is not only dead, it has mutated to
pointlessness. I miss the old days of the Rag Chewer's Club. I miss
the variety of conversation. The bands are filled with inane and
"hi-bye" contacts which last for over an hour.

You hit that nail rite on the head Jake. Thats why I havent been on
the ham bands much in past 15 years. Originally got my "Rag Chewers
Club" certificate from ARRL in 1937. Did a 5 hours QSO wid a guy
in South Miami to qualify (all cw). I lived in N. Miami at the time.
Will never see the likes of those days again [:(I guess.

I wish I did, Mike. I'm using 1.19 as well, and would really like to
have a windows version. I don't know if you are running Win 95, but
1.19 runs quite well under 95, in a window. I never could get it to
run in a window under 3.1.

>John
>WRITE TO: jmt2@juno.com

You probably have several problems including weak finals,
bad paper capacitors, etc. You'll just have laboriously
go thru the rig stage by stage. I used to have a NCX3 -
it was a good performer with a consistent 80 - 100 watts
output. I'm reworking a NCX5 now.

By the way, type 6JB6 tubes may be substituted for the 6GJ5 tubes
if the following is done: remove all wires to pin 8 of the socket (it's
being used
as a tie point) and relocate them to an isolated tie point. Then ground
socket pin
8. The two tube types are identical except that the suppressor grid of the
6GJ5
is grounded internally while in the 6JB6 the suppressor is brought out to
pin 8.
This conversion was done in the NCX5 Mark II by the factory.

A NCX3 manual is available thru W7FG Vintage Manuals
1-800-807-6146 for around $20. They also have a homepage on
the net.

Good luck and don't give up on the rig.

>useful CB'ers), who sponsor some of the repeaters.

CB is only one serivce under part 95 and are called "Personal Radio
Services". There are still four services within the Personal Radio
Services in part 95 - GMRS, CB, Radio Remote Control, and Interactive
Video and Data Service.

The new Family Service may be under part 95 as well...I haven't paid much
attention to that.

>As you note "yet", one solution is get them all TechMinus licenses.
>A pile of sealed HTX-202's and a pile of unwrapped "Now You're Talking"
>books from Radio Shack might get them motivated.

A solution to what? Is there a problem? I must have missed something.
Ham radio is for people who are interested in radio as a technical hobby
in addition to communications.

If people just want radios for talking to eachother - and not worry about
a lot of rules and technical stuff - The personal radio services,
including CB, are perfectly acceptable.

_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #175 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 9-Aug:
-
1. Phase 3-D Satellite Launch Rescheduled for February 1997
2. Amateur Support of TWA Flight 800 Recovery Effort Ends
3. SAFEX 70 cm Repeater/Beacon on the Air from MIR Space Station
4. Houston AMSAT Net Audio Now Available on the Internet
5. Weekly Propagation Forecast
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. FCC to Allow Electronic Filing of Renewals and Modifications
8. Delays in License Processing Cut from 75 Days to "Overnight"
9. Commission Approves New Low Power Part 95 Service at 216 MHz
10. FCC Wants 23 Channels Returned After Conversion to Digital TV
11. IBM Takes Full Blame for Olympic Computer System Snafus
12. Special Event Station Calendar
13. ARRL Wins "Award of Excellence" for SAREX Participation
14. WB1HBB Resigns as NE Division Vice Director, Wife Injured
15. Second Young Kentucky Amateur Busted on Bogus Scanner Charge
16. Toby J. Metz, KB7UIM, Wins "Young Ham of the Year" Award
17. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family of
North Webster, Indiana, and users of the N9SBH repeater system,
where "This Week in Amateur Radio" is heard in Elkhart, Warsaw, and
Ft. Wayne on 224.16 and 146.505 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
```

kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>Bernie, WR3E.

You have noticed a common usenet problem... some 20.000 newsgroups
were created for discussion about many different topics, yet some
people cannot be bothered to check if their posting matches the topic
of the newsgroup before posting.
The result is often called "noise", and the "signal/noise ratio" of a
newsgroup can be varying, much like the s/n ratio when receiving a DX
station.

Then there are those loud mouth postings, like Dave's. Those guys want
to let the world know they have something *very important* to tell, and
post it in as many newsgroups they can think of. Those postings are
allmost certainly off-topic.

I'm afraid it is difficult to overcome. You will just have to live
with it, and select news software that allows you to quickly skim
articles to see if they are in the "signal" or in the "noise" category.
Some news software will also allow you to automatically skip articles
that are posted to many newsgroups. That will help you to avoid some
of the utter garbage (like "visit my page!" or "make money fast!").

73,
Rob

172. History of Morse question

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-02 00:00:00 UTC
From: bill.shymanski@mwcs.mb.ca
Message-ID: <8C5A49E.03BB001639.uuout@mwcs.mb.ca>
Source record: 219798

Without starting a horrendous long thread: can anyone tell me when hand-sent "common carrier" landline telegraphy flourished ?
Are there any land-line telegraph networks still extant that use hand-sent code or that rely on "by ear" code recognition ? I get the impression that the 5 level Baudot teletype is a pretty ancient technology, possibly going back to the '20s or earlier...can anyone tell me when machine-codes replaced hand-sent codes in commercial service ?

Perhaps it would be more bandwidth-conserving if responses were E-mailed; if I get more than a few responses I'll post a summary.

73,

Bill VE4STW

bill.shymanski@mwcs.mb.ca

(And I'm confining this to landline telegraphy only. I know perfectly well that on radio "Morse Code is Good For You", that "Morse Keeps the Riff Raff Out", that "Morse Gets Through When Nothing Else Can", that "I Had to Learn It and So Must You", and that " I Would Surely Have Died Had I Not Sent For Help by Tapping the Wires Together", and that aliens in flying saucers can't decipher code at all.)

There was an article examining a number of such antennas recently in
VHF Communications magazine (from the UK). I do not have the details
here, but the results were fairly poor from memory. SOme had
reasonable patterns, but gain was around 4 dB below that claimed
(again, relying on my memory).

Steve,

Take a look at the premiere issue of CQ VHF, Jan/Fef 1996 (CQVHF@aol.com). On page 56 there is a good review of the HTX-212. It is suggested you store frequency you can't transmit on in one of the two VFO memories. If you need to work a non-standard repeater configuration, you can make the changes through the built-in menu by extending the transmit coverage. If you can find it in your manual, try the author of the article Rich Moseson, NW2L or your Radio Shack salesman. I wish I could give you specific details but this should help. I haven't needed to make such changes to my HTX-212 configuration since I got it last weekend. All of the repeaters in my area follow the recommended ARRL guidelines.

Hello Bill,

This is Phil, KB8LUJ. I used to do a lot of writing about this subject. Here are a few facts. Actually telegraphy goes back a long way before "wirelne common carrier", namely the ancient Greeks who used mirrors (day) and fire (night) to flash signals. In 1792, the Optical Telegraph (a system of poles and flags that rotated freely over a differential of 45 degree). The different positions on two flagged poles could represent about 8500 words. (92 pages of 92 words ea) The system was actually decommissioned just around the time of WW-I.

Now Volta discovered electric current about 1805 and Morse (who was actually an artist) got the idea for a signalling system he called the 'telegraph' in 1832. He received the patent in 1838. It was 1844 before he could convice people (ie Congress) of the benefit of his device. In 1855, Ed Hughes is credited with inventing a drum device to print messages. In about 1870, Roland (in Italy) used 60Hz AC to send 8 dispatches in parallel. Baudot, a Frenchman, invented Baudot code in 1877 (the Hughes device had 28 possible 'bits') and the Baudot system (went on line in Italy) could send two to four messages at one time (depending upon importance to the use of the wireline).

So, to technically answer your question, machine sent code started in 1792. Wireline, with Morse, in 1844 and 5 level (bit) Baudot in 1877.

By the start of the 20th Century (1900), Frank Pearne got Jay Morton (Morton Salt Co) interested in the printing telegraph and consulted with Charles Krum (who worked at Western Cold Storage, run by Mark Morton, Jay's borther ..Yeah, I know, Krum was an inventor, but he had to do something to earn a living.) Krum, and his son, Howard at first experimented unsuccessfully. In 1906 Pearne quit and became a teacher. Krum kept at it and in 1908 ran their first tests (Chicago and Alton RR) and concluded that mechanical was far better than 'hand'. They decided to make a 'complete' device. Although they had good results, they also found requirements 'exacting'. Morton paid the bills, which were sizeable. The equipment became more accurate and needed less mechanical attention.

Western Telegraph, the common carrier of the day, was very slow to abandon manual Morse. After all they could find many good Morse operators for very low wages.... It was in 1914, when Kent Cooper, of Associated Press (AP) asked Morkrum Co (the teleprinter company founded by Morton) to install one of their devices so that he would not have to send copy boys (messengers) to every Newspaper in NYC with a story.

The original 'teletype' was a converted Oliver Typewriter. In 1910 they had worked out and patented a synchronization process for their GreenCode printer. The idea of multiplex arrived in about 1917.. where parallel lines evolved. The first 'conventional' teletype was the Morkrum 11 of about 1919, followed by the Type-12 in 1924. Now Kleinschmit held printer patents, leading to the merger with Krum, into Morkrum-Kleinschmidt (later renamed Teletype Corporation) and the introduction of the 15-Type.

In 1930, the Bell System (AT&T) pooled resources with Teletype.

Any other questions?

73 de Phil - KB8LUJ

182. CW Learn Ideas

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-03 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-0308960620520001@wd1v.mv.com>
Source record: 219604

This is becoming an increasingly common question as many "no-code" Technicians realize they can add more privileges to their license if they learn Morse Code. The following list of suggestions should be helpful in finding ways to approach the effort.

• Listen to code at a rate faster than you can copy.
• Participate in Novice-Roundup and/or Field Day. Practice whenever you get the chance!
• Avoid the "deciphering" plateau around 5 WPM and and character plateau at 10 WPM by listening to the fast Farnsworth-paced "beat" of each letter and the "beat" of common words. (See the question on Morse code speed for more information on Farnsworth pacing.)
• Practice to develop a "copy buffer" so you copy about 5 characters behind. (This is not easy but it's how the higher speeds are done.)
• Practice both with headphones and "open-air" copy as the code test may be in either format. (If you only practice one, you may fumble on the other.)
• Most of all, don't give up! Recognize when you reach plateaus and keep trying until you break through them.

The methods we use to learn MORSE are varied. Here are some different methods so instructors & students can see, choose, & try various ways as they practice, practice, practice. IF YOU GET STUCK WITH ONE METHOD THAT DOESN'T WORK - JUST TRY ANOTHER METHOD!

• From: K1KP @ KA1SRD.MA
This is what got me from 8 to 13 WPM in 3 days (and eventually to 20):
I made a tape of random 5-letter groups, Farnsworth spaced at abt 20 WPM characters. After each letter, I immediately spoke the letter on the tape. So when I listened to the tape, I heard the Morse character
immediately followed by the english character. I literally listened to
this tape night & day (including sleep) for 3 days and at the end of 3 days I could do over 13. If I heard a morse character, I would hear the
voice in my mind before I heard it from the tape. Try it!

• From: WB1O @ K1UGM.MA
Too many Novice classes these days seem to be geared to passing a test
rather than teaching newcomers to get on the air.
As a former cw instructor, I always subscribed to the Farnsworth method

of code .. i.e. .. 13 wpm with 5 wpm spacing .. that way, as each student
gradually progressed his/her speed, the "sounds" of the characters remained
the same. I guess one of the most important things to instill in your students is that code can be FUN.

• From: N1KGW @ KA1SRD
Do **NOT** let them see the code written out (ie) .- -.. etc...
The transition from indvidual dits & dahs to letter sounds is very hard.
If they learn didah is A they don't have to translate the individual sonds into
a code and then to a letter.

• From: WA1TBY @ K1UGM.MA
I usually send the characters at 18 wpm speed with long spacing in between letters. Have successfully completed two novice classes at the
Ward Elementary School in Newton by using this method and the kids are 4th,
5th and 6th graders. It is surprising how fast they catch on, passed 35 or
37 first year and 16 of 17 second year, all with cw ability.

• From: K1TVW @ KA1PEP.MA
1. Prepare the class to be CW Operators. Don't just prepare them to pass a 5 (or 13 or 20) WPM Morse Code receiving test. If Morse Code is presented as something they must learn so they can talk on the HF bands, the best you can hope for is a bunch of voice operators who just learned Morse Code to upgrade. Not everyone will like CW operation and thats fine, but by presenting it in a positive manner you'll be encouraging those that will eventually discover they enjoy CW operation.

2. Expose the class to a CW QSO at 25 WPM. Explain that this is their goal for CW operation. But, before reaching their goal they must learn to crawl (5 WPM), then learn to stand (13 WPM), then learn to walk (20 WPM). Do not mistake a slow QSO at 5, 10, or 15 WPM for real CW operation.

3. When the class has sufficient operating privileges, don't substitute tape or computer practice for real on-the-air operating. This is like learning how to swim without ever being in water. Form a MCW (code practice oscillator or side tone and an HT) net on VHF simplex or through a repeater. Novice and Tech+ operators should try to work HF CW to increase their code speed. Unscheduled QSO's with strangers are better than scheduled QSO's with friends.

4. Sending to a terminal unit with a Morse Code decoder (like a KAM) can be good sending practice to assure development of a sending style with sufficient character and word spacing. If the decoder can understand the Morse Code sent, then a human can. NEVER use one of these units to decode Morse Code during a QSO. Use it only to develop your sending style.

5. Of course, use the Farnsworth Method of learning Morse Code. I think the ARRL Morse Code tests use 17 WPM characters at 5 and 13 WPM average speed. You might consider extending this to using 27 WPM characters at 20 WPM average speed, although this is not done in the ARRL 20 WPM test.

• From: W1OG > K1EA:
The students should think in cw when ever they can ie: while
riding or
walking read all the signs to them selves. that is to say the
stop sign is
dit dit dit dah dah dah dah dit dah dah dit and so
forth. u know the
cars , billboards st signs etc. its surprising how quickly this
sticks
when u think in cw. language classes use this methode, speaking only
in in the language being taught. 73! GUS

• From: WD1V @ WB1DSW.NH
Suggest you change your mind and decide to FALL in LOVE with CODE!
Explore it. Not liking it is more of a hinderance to learning it
than anything
else. So what is there to like?
1) It is efficient - BW small and gets thru when other methods can't
2) It takes SKILL - a skill that you can learn and enjoy
learning and using
3) It stimulates your brain and your mind works differently when
you use it
for CW - focused concentration
4) It takes cheaper gear to have a CW QSO = more QSOs with the
rare ones...
5) It is an opportunity to express your self with a style and
recognize
different styles in others
6) CW ops are faster QSLers and are VERY polite and friendly people...
7) CW is musical and communicative at a primal level...exploring
that may
show us things about ourselves that we didn't recognize before
8) CW means you can operate silently - great for insomniacs that
don't wish
to wake others

• From: WA2RCB @ N3FOA.#EPA.PA.USA.NA
Hello! Another Idea I used to get my code speed up:
I would listen to the commercial CW stations when they

were sending ship traffic & WX reports. Beautiful CW
at 20-25 WPM at an hour a crack. One I used was station
CFH, on 8.697 Mhz. When not sending CW marker beacon, they
send interesting WX reports. many many CW from 8.1-9.0 Mhz
Try them on ur general coverage receiver.
In about 5 months, I was copying abt 35 WPM, problem I
had was going from commercial CW, to the cw on the ham
bands was a shock in comparason! Oh well...(*.*)

• From: AA2DN @ W2ODV
#1- BEG, BORROW, or STEAL a reciever and listen to code being
sent thats
FASTER copy

#2- Send license plates while standing on a street corner
waiting for the
light to change. Short exposure to nice random groups

#3- Practice sending on a straight key. Put the Bencher away until
you're ready to go out on 20 and put it to some REAL use.
Manually forming
characters helped me a great deal. Specifically, record your
sending as you
send text originated from sending a newspaper article backwards. It
shouldn't be to hard to send faster than being able to copy. Play the
tape back. Look at what you copied and read it backwards from
the paper.
See how accurate your copy is. Learn to send at the same time.

4#- Write down whatever you copy, GO ON WHEN YOU MISS ONE LETTER..

5#- Use the Farnsworth method. Use no visual cues.

#6- Enjoy your education. Learn a new, universal language. Ham
radio is a
hobby. If a hobby isn't fun, why bother with it..

• From: KB8GMP @ W8SP
After attaining a rudimentary knowledge of the code by whatever
means (arrl
tapes, hand practice, etc.) I got together with another person who was
learning cw. We would take turns sending a letter at a time at
about 13 or
so wpm. As soon as the 'receiver' spoke the letter, the next
was sent.
After a while, we could do the same thing with whole words. Now
to refine
higher speed cw, I personally used 'Super Morse' on a computer
and set it up
to send me random regular words with a character and letter
spacing of about
60, and a word spacing of 3 to 5. Then I blanked my mind and

listened to the
code and watched the words appear on the screen. After about 5
minutes, I
would slow down the character and letter spacing by about 5 or
10 wpm. This
would continue until I could start repeating the words which
was then about
35 to 40 wpm! Not bad for a novice, eh? This method will
quickly burn out
your attention span and will fatigue you quickly, but it does
work very
quickly. For times that I couldn't be around a computer, for instance
driving, I would read a roadside sign and then think the sign's
text out in
morse. The goal is to complete the sign in morse before I
passed it. Hope
these tricks help somebody out. Let me know if you like them.
73 4 now and
happy dit-dahs. Joff. **<<<**Gets More Pizza**>>>**

In the way that traffic on the air explicitly has to *ex*clude any messages that contain either political propaganda and the pursuit of one's own economic interest.

>Read "Hitlers Willing Executioners", a best seller in this country.

Why should I? I visited the Holocaust museum in D.C. and almost puked. Is that good enough for you?

>You will read that ordinary Germans made the holocaust possible.

No one doubted that. But that was 3 generations ago.

>You will read that even after Himmler ordered the killing of Jews to stop
>ORDINARY Germans, like you, kept killing and torturing.
> ^^^^^^^^

That actually is the greatest bullshit I have ever read on usenet. You are insinuating that a student like Moritz is capable of killing and torturing. My, oh my, your brain really needs some rest, Burt. Why don't you go to a local library and do some reading about your own ancestors. Keywords: Anglo-Saxons, Germany, England United States of America. Unless you are Jewish and can show a clear line of family history without any Anglo-Saxon blood in the last 400 years, of course. In that case, however, I would strongly advise you to refraih from speaking as THE American. Also, you should get a callsign from Israel and sign W1/4X4LID in the future.

Get a life, Burt.

Excuse me if I missed the discussion here, but is that the real Burt Fisher? I mean THE Burt "I am a real ham and you are just a bunch of losers" Fischer? I find that hard to believe, since he as hater of Germans is rather unlikely to use an e-Mail address that uses the surname of one of Germany's greatest poets, August von Kotzebue.

Has he finally gone mental?

What does THAT have to do with anything? How could that possibly be
relavant to the issue at hand here?

You must be one of YE OLDE FAHRTZ; stuck in the 1940's with your vacuum
tubes and your "Rule the World with Morse Code" handbooks. Otherwise,
you'd have that modern-day invention known as a CD-ROM, where you could
pop in a call disk and instantly find the information you're asking of me.

I am thinking about buying the MFJ 784B DSP filter and would like hearing from current users. Mainly, does it live up to the claims made in the full page ad's in QST? I'm running a Kenwood TS-440s/dipole and really would like to cut the noise and QRM on 40cw.

Thanks for any input.

Hi All!

I know this is not related to ham radio, but I figured that my best chance of obtaining the information I need would be through somebody here. I have to install a DSS system at a bar/nightclub that I work at. We need to be able to show 6 separate events using the DSS system, so I guess I need 6 separate receivers. My question is if anybody knows where on the Internet that I can get good information about setting up a system such as this. Any advice will be appreciated. Plese respond via E-mail to:

72527.01012@compuserve.com

Thanks!

Burt does little but bitch and apparently stir up trouble on 20 meters.

Caught a packet message from the Bertster where he is threatening to get even with someone who insulted him on 20 meters. He brags about challenging the fellow to "tell me that to my face" apparently an invitation to a physical confrontation. They guy Burt is challenging is 71 years old, gutsy move Burt.

Perhaps some day his oft quoted " tell me that to my face" challenge will be answered and Burt wil get his ass kicked. Bet he won't tell us when it happens. Actually I don't think it will ever happen because I'm sure Burt checks the callsign data base to be sure he is dealing with a geriatric before issuing a challenge. Besides if some 70 year old whips him he'll just call the cops on the guy.

Burt I do agree WA1AOH should not have called you scum; it is an insult to scum everywhere. Have a nice non-confrontational weekend.

That's not accurate. There may be an infinite number of frequencies,
but that is not the same thing as an infinite number of channels. If
a communications channel is to be capable of passing data then it
must have a finite bandwidth, and so the number of them which will
not overlap and interfere so as to prevent the data passing must also
be finite. In your post-Shannon `theory', are you proposing that
something can be given the name of "channel" which is incapable of
passing data?

200. Channels vs. Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-03 00:00:00 UTC
From: bigsteve@dorsai.org
Message-ID: <sY4AyQQI8VXQ091yn@dorsai.org>
Source record: 219622

I'm reading the thread about 2Meter jammers and seeing how it turned into a debate about which dictionary has the proper definition of a radio channel. Come on you guys, as hams you can operate on any frequency you want to within those authorized by the class of your license. You can also shift frequencies by as little as a few hertz to avoid interference. True, the frequency you use requires bandwith, where sidebands occupy the immediate frequencies adjacent to the carrier, but this is NOT a channel.

A channel is assigned by the governing communications body of the country, or by international agreement. A channel involves; 1) transmitting on a single frequency, (or multi frequencies kept within a certain relationship, like TV or duplex), 2) without any or little variance, 3) the bandwith to be occupied by the sidebands, (thereby restricting the modulation level if it's FM), and, 4) sometimes, the provision of dead frequencies between these channels, (guardbands), to prevent interference between assigned channels.

While repeater coordinating committees do assign pretty much standard frequency pairs, nowhere are these pairs assigned channel numbers in the FCC rules.

A US TV channel has two tramsmitters operating 4.5 MHz appart, one visual, one aural. The video is 1.25 MHz, (+/- an assigned variable of 10kHz), above the bottom frequency limit to provide a guard band to the channel below, (the lower sideband is "suppressed"). The aural is 4.5 Mhz above the video, providing a 50 kHz guard band to the channel above, and 500kHz to seperation to the channel's video signal. At 3.58 Mhz above the video is a subcarrier for the color. Since the lower sideband is filtered out, this signal is like a third transmitted frequency within the channel, even though it is a fixed sideband.

CB channels are individual frequencies, but since they must be "crystal controlled" exact frequencies, they were assigned channels. It was easier to define them as channels in the early days since you actually had to use a 23 postion switch to change crystals, and sequential numbers were easier to say than 27.xxx, 27.yyy, etc.

Marine and Aeronautical channels are also assigned as fixed frequencies, purely so that they can be tuned in accurately and don't interfere with each other. A safety requirement.

Even broadcast FM are channels. The frequency announced is the unmodulated center frequency of the FM signal, the limit is +/- 100kHz for each channel. This represents the FM's maximum modulation. These channel have numbers according to international agreements, (i.e. 88.1MHz is channel 201, 107.9 is 300), but they are really worthless since broadcast listeners

were used to frequencies being announced as they are on AM radio. Second, the receivers were tuned by VFO, not a selector switch with 100 positions.

Then there are logical channels, like those used by trunked radio systems and cellular phones. The conversation may be switched from radio channel to radio channel by a computer at the transmittter site, but a control signal on one fixed radio channel switches the receivers as well.

So a channel is a channel, but for ham radio, it is whatever frequency you can operate on when it comes to point to point communications. You can treat it like a channel because you are expected to recognize that the bandwidth you take up can posably cause interference to someone on an adjacent frequency.

My guess is that you have problems with socializing on the air and based
on your previous commentaries you are too hung up about technicalities
and proper QSO management to just enjoy talking to someone.

I believe most hams learn a format for a QSO by listening to others.
Heres your big chance Burt, break the cycle of poor QSO technique,
during your next contact ask the other station about himself etc.
I doubt this will happen because you'll be too busy bitching and moaning
because the other station said the "wrong thing" or told you about
something HE did.

I also think your probably not very interesting to talk to on the air.

Hello Abe,

The FCC recently authorized the "Family Radio Service" on the 12.5KHz offset channels (those in between GMRS authorized freqs) with the GMRS band. There are perhaps 5-15... I can't recall the number. It is a 'new' low powered (500mw or less) radio service which uses only portable radios with NO external antenna jack (yet) and (as I understand it) and internal antenna.

It was petitioned by Radio Shack a couple of years ago and seeks to offer short range communications to families at camp grounds or within neighborhoods. No repeaters, yet, but transmitting from on top of a flag pole..... hmmmmm.....

Where did you get that idea? Just because your statement is often
true is not sufficient to make it definitive. Perhaps you would care
to visit any dictionary of your own choosing and report to us us its
entry in its entirity. Certainly none of mine mention governing
bodies or equivalents and also none of mine refer to international
agreements.

Regards,

> > >
> > > Thank you for your help.

I have 2 1992 accords, or I have 1 and the yl has 1.

they have been running 2/440 since new and nary a tick from either. I did remote mount the rf units.

In my wifes, under the front seat, in mine, under the rear package shelf. Her antenna, a mag mount on the roof
my antenna, a comet triband mounted to the trunk lip

I also run HF mobile in my car with no problems. i did ground the hell out of the setup

the outbacker is attached to the trunk. the trunk is grounded in 2 places to the frame. the radio is grounded to a bolt on the front seat
and the power connections ground runs direct to the battery.

My suggestion is keep the antenna on the roof or back on the trunk and keep the rf unit away
from the front dash where the computers are.

run your power direct from the battery, not the cigar lighter or the fuse block.

BTW, i have run both VHF and HF together. While coming home from Dayton this year, my friend
was talking to the other cars we were traveling with and I was working most of the world. At times, both radios
were transmitting toegther and NO problems whatsoever.

good luck, enjoy the car, they are a great piece of American made machinery.

73,

steve

210. .435 repeater in L.A. homepage? Where?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-03 00:00:00 UTC
From: csupak <csupak@ucla.edu>
Message-ID: <3203D07F.1ED0@ucla.edu>
Source record: 219632

I've been told that the 147.435 2M repeater in Los Angeles has a
homepage, of sorts, and I'd like the URL if anyone knows it, please.

Thanks all

CS

--
First they came for the hackers. But I never did anything
illegal with my computer, so I didn't speak up.
Then they came for the pornographers. But I thought there was
too much smut on the Internet anyway, so I didn't speak up.
Then they came for the anonymous remailers. But a lot of nasty
stuff gets sent from anon.penet.fi, so I didn't speak up.
Then they came for the encryption users. But I could never
figure out how to work PGP anyway, so I didn't speak up.
Then they came for me. And by that time there was no one left
to speak up.
It can happen folks

211. Re: BEWARE OF JON VAN ALLEN, KF7YN, IN SALT LAKE CITY

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-03 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <DvL16w.IG0@news.hawaii.edu>
Source record: 219633

After reading the above mentioned "warning" I wrote to Mr. Jon Van Allen
myself with the following:

>You'd better come over to rec.radio.amateur.misc and defend yourself.
>I'm not declaring you guilty but others surely will.
>73 from Hawaii,
>Jeff KH2PZ / KH6

(Jack Clarke's "beware" article was included in the above)

and received from Jon:

Jeffrey,
Thanks for the heads up. I must admit I screwed up royally, let me explain
briefly. I work for Matson on a containership running between LA and
Honolulu. I got called to work with only 24 hours of notice (I usually get 4
or 5 days) and I flat had to much to do I overlooked paying Jack for the
scanners. Not only am I embarrassed but ashamed as well. I sent Jack a check
this morning, (I just got back from the ship last night).
Thanks again, and I know I have some explaining to do to clear my good name
on the newsgroup.
73,
Jon

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 AUGUST AND FORECAST FOR 04 AUGUST - 06 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 79/19

GOES satellite data for 02 Aug
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.2E+07 (normal)
X-ray background: A7.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Aug 05 Aug 06 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Aug: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 02 Aug
Learmonth 8 2223 2312
Fredericksburg 10 11
Planetary 10 11

Observed Kp for 02 Aug: 3134 3212

2B. MAGNETIC FORECAST
Date Ap Conditions
04 Aug 8 Quiet to unsettled
05 Aug 8 Quiet to unsettled
06 Aug 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
03 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
04 Aug Normal Normal Normal
05 Aug Normal Normal Normal
06 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
03 Aug 1

Observed Australian Regional MUFs:
Darwin, Hobart: Near predicted monthly values,
with spread F during local night.
Townsville: Upto 15% depressed between 0000-1200UT,
with blanketing sporadic E during local night.
Sydney: Near predicted monthly values.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
04 Aug 10 near predicted monthly values
05 Aug 10 near predicted monthly values
06 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

Hi Tony, No dictionary defines DX, QRP, Top band, Transmatch, Balun, SWR Meter, Boatanchor; heck, even your wonderful Oxford dictionary has no entry under Ham Radio ;) . Hence, the definitions for these specialized terms must be created and agreed upon by the users of our specialized avocation.

In the present case it appears that the Webster definition of Channel does not seem to coincide with that of many HF amateurs.

Just what are we to do? I suggest we agree to disagree.

As an aside, the two-volume Oxford I have was found in a dumpster outside the Geophysics Department. I am now beginning to understand why the previous owner placed it in that particular location. =:o

Northern Illinois DX Association Presents:

44th ANNUAL

W9DXCC

DX CONVENTION AND BANQUET

SATURDAY, SEPTEMBER 7, 1996

HOLIDAY INN, ROLLING MEADOWS, ILLINOIS

The Premier Midwest DX Convention

A Great PROGRAm for All Dxers !:

Amateur Radio & the Internet - Scott Neader KA9FOX
Live demonstration, see Scott's Ham Web Page
at:http://www.qth.com/ka9fox
FS5PL DXpedition - Paul Gentry WX9E, with N0BSH and WE9V
Great presentation of DX contesting in the Caribbean!
Building a Competitive One-Tower Station - Steve Morris, K7LXC
Proven tower and station design hints ; be a Big Gun!
Zero-Beating and Other Audio Techniques - Bob Heil, K9EID
The Master of Audio helps us to hear' it right.
Station & Antenna Grounding - Rick Mace, N0XAV, Polyphaser Corp.
You are properly grounded now, aren't you?
World Radiosport Team Championship - Lew Gordon, K4VX
"Da Judge" tells us about the latest Olympic style DX
competition.
XR0Y & XR0Z Dxpedition - Jim Riff, K9JSC
The full story behind last year's very successful DXpedition.
Using the PacketCluster - Packet Cluster Sys-Ops
Back to the basics and some helpful tips with open floor forum.
ARRL News and Views - Ed Metzger, W9PRN, Central Division Director
The latest news from Headquarters, with reports from the Vice
Director,
the DX Manager, and from the W9QSL Buro.

BANQUET DINNER:
Excellent banquet dinner with Social Hour cash bar beforehand.
Guest DX speaker: Wayne Mills, N7NG
"Beyond DXpeditioning: Albania, Myanmar, North
Korea..."
DXCC Countdown, DX "Hog of the Year", Grand Prize Drawings
Dinner choices: Roast Prime Rib, Grilled Swordfish, Chicken
Cordon Bleu

QSL CHECKING:
Bill Kennamer, K5FUV, will be checking QSL cards for DXCC
credit.
Bring your QSL cards (limit 120, no 160M please) for instant credit.
NO Mailing!!!

PRIZES:
Prizes will be awarded throughout the day plus grand prizes at
dinner!

HOSPITALITY SUITES:
DX Hospitality suite available for early arrivals on Friday
Night, Sept. 6
and open again for a night cap on Saturday (GMDXA) following the
banquet.
The DX suite will be open finally for early morning risers on
Sunday, Sept. 8

TIMES OF EVENTS:
Friday Hospitality Suite: 6:00 pm to ?
Saturday Registration: 8:00 am
Convention Begins: 9:00 am
Banquet Dinner: 7:00 pm
Saturday Hospitality Suite: Following dinner to ?
Sunday Hospitality Suite : 8:00 am to Noon

LOCATION:
Holiday Inn "Holidome" in Rolling Meadows, Illinois located
northwest of Chicago. Free airport shuttle, exercise facilities,
children's activities.
Directions:
I-90 north to Rte.. 53 to Algonquin Road Exit, Left at light,
Hotel on right
For reservations call (847) 259-5000 or fax (847) 259-6795
(mention W9DXCC)

REGISTRATION:
SAVE AND REGISTER EARLY !

Call, fax, mail, or e-mail to obtain a registration form:

Phil Camera, KB9CRY, 1996 W9DXCC Chairman
806 Portsmouth Westchester, Illinois 60154

Home Ph (708) 343-1696 Home Fax (708) 343-4394

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.1, 14 June 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Baycom support - ye gads!

Corrections/Updates:
Included SLIP support in kernel config - oops.
2.0.0 kernel and ax25-tools update.
Updated net-tools to 1.32-alpha version.
Removed Jonathons `special' net-tools.
A bit of shuffling about to make more sense.
Updated the example configurations.
A minor copyright ooops.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
```

recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.0.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-2.0.0.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.0.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.
5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/local
# gzip -dc ax25-utils-2.0.0.tar.gz | tar xvvof -
# cd ax25-utils-2.0
# make install
```

The files will be installed under the /usr/local directory by default
in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should read the README.ncurses file in the top level
directory. You can do as Jonathon suggests, or you can try replacing:

```
#include <curses.h>
```

with:

```
#include <ncurses/curses.h>
```

in the:

```
call/call.c
call/menu.c
```

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure
it to work as a `vanilla' AX.25 interface with no TCP/IP. The
following configuration will get you to the point of being able to
make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode
or with other cards such as the Ottawa PI2 card, PacketTwin and other
SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create
an AX.25 port ready to use to make outgoing calls. For other types of
hardware you need only complete the first step.

6.1. Creating the /usr/local/etc/axports file.

The AX.25 ports have a configuration file that is read by many
programs that want to find information about an AX.25 port. This file
is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

```
portname callsign baudrate paclen window description
```

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the
slattach program (refer to the NET-2-HOWTO for more information on
slattach and the other network software for Linux). For example:

/usr/local/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS1 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /usr/local/etc/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin

section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-2.0.0 distribution for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/local/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.6 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the NetRom port in much the same way as the /usr/local/etc/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

```
netrom VK2KTJ-1 LINUX 235 Linux Switch Port
```

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

```
axport min_obs def_qual worst_qual verbose
```

Where:

axport
is the port name obtained from the /usr/local/etc/axports file.
If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /usr/local/etc/nrports
file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/local/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/local/sbin/netromd command in your rc files
so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5 and an
mtu of 512 and configured with the details from the

/usr/local/etc/nrports file for a NetRom port named netrom you would use:

```
# /usr/local/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1
```

```
LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/local/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 2.0.0 kernel is actually newer than that included in the package and the normal installation process would have overwritten

the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number

e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector latch (also known as "intack port") for PA0HZP cards. There can be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the special function register on several cards. The default is 0.

```
option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card
```

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:
attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems.

When the driver is running it follows the standard of looking like a KISS interface, so you treat it in much the same way as you would the PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled module support into your kernel, and also selected the appopriate options to support the Baycom driver during the make config stage when compiling your kernel.

The relevant options that you must answer `Y' for are:

Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

mknod /dev/bc0 c 60 0
mknod /dev/bc1 c 60 1
mknod /dev/bc2 c 60 2
mknod /dev/bc3 c 60 3

You will use these later.

13.3. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your
/etc/conf.modules file:

alias char-major-60 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.4. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.5. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.6. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. There is a setbaycom utility which I have not yet located that will allow you to configure others. If you happen to find it please let me know where it is kept so that I can include details for it here.

13.7. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /usr/local/etc/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /usr/local/etc/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-1 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/local/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14.4. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be log in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /usr/local/etc/ax25d.conf file:

default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will

have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.4.1. Creating the /usr/local/etc/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /usr/local/etc/axspawn.conf file. This file is formatted as follows:

```
# /usr/local/etc/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

```
guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
```

create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.5. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.5.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway

machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.5.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.5.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.5.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.5.5. Add the PMS to the /usr/local/etc/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.5.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this

would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

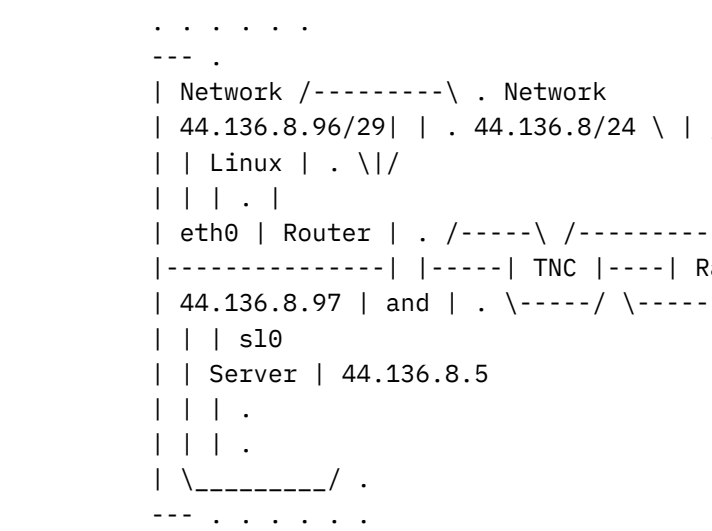
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

16.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
```

```
echo " done."

echo -n " ethernet:"
/sbin/ifconfig eth0 44.136.8.97 netmask 255.255.255.248 \
broadcast 44.136.8.103 up
/sbin/route add 44.136.8.97 eth0
/sbin/route add -net 44.136.8.96 netmask 255.255.255.248 eth0
echo " done."

echo -n " AX.25: "
axattach -i 44.136.8.5 -m 512 /dev/ttyS1 4800
ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.8.255
route add -host 44.136.8.5 sl0
route add -net 44.136.8.0 window 1024 sl0

echo -n " Netrom: "
nrattach -i 44.136.8.5 netrom

echo " Routing:"
/sbin/route add default gw 44.136.8.68 window 1024 sl0
echo " default route."
echo done.

# end

/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz

/usr/local/etc/nrports

# name callsign alias paclen description
netrom VK2KTJ-1 LINUX 235 Linux Switch Port

/usr/local/etc/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

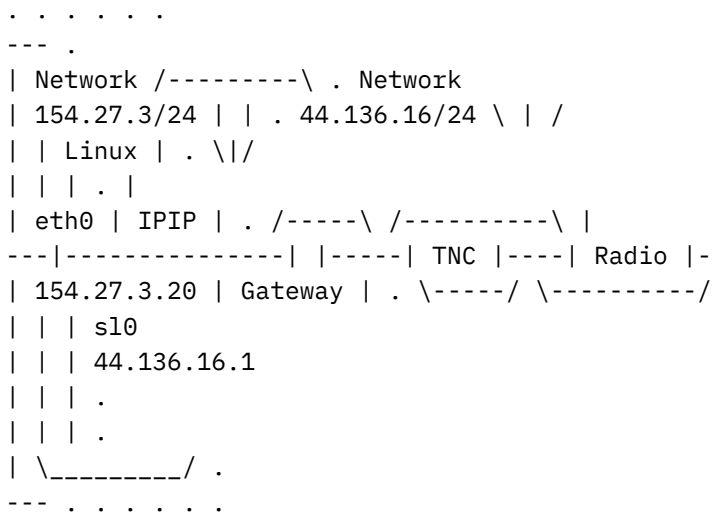
• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

16.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways around the world. The new tunnel driver supports multiple encapsulated routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
```

```
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

```
/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to

a separate file and read in using the bash source /etc/ipip.routes
command (assuming you called the file with the routing commands
/etc/ipip.routes) as illustrated. The source file must be in the
NOS route command format.

• Note the use of the window argument on the route command. Setting
this parameter to an appropriate value improves the performance of
your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"

17. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

18. Copyright.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.0, 30 April 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
ObjectProDSP
LBBS - maybe.
Mike Westfall's ttylinkd
Craig Small's ttylinkd
predict, uo11, dove, kepgen - thanks John!
Corrections/Updates:
Copyright changed to GNU GPL version 2.0
```

Removed the Hints/Tricks section and made it the AX25-HOWTO
Removed the SCC, PI, PacketTwin and moved them to AX25-HOWTO
Updated svgaftt - thanks Andrew!
A small fixlet for TNOS on ftp.ucsd.edu
Updated chipmunk home site - thanks John!
Updated TNT to DPTNT

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor,

G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this

program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net

<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.2. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.3. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.4. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

- various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

- Simple dialer, to allow connections through AX.25 or NetROM nodes.

- White Pages

- Transient handling of type A (ACK messages).

- SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

- Message filter mechanism

- Field swapping (like SWAPP.SYS in FBB).

- Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of

PacketCluster nodes with some experience on both PacketCluster
and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from
a users' point of view. It allows multitasking and different
priorities for different things.

• The software detects looping DX spots without generating endless
messages. clx filters out such duplicate information. We have
implemented a concept which allows us to connect the network at
multiple points, which would formerly have been called a
"Cluster Loop". clx knows of so-called "active" and "passive"
links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog
programs).

• clx uses modern programming concepts like shared memory for
common data, lex & yacc to implement command language, shared
libraries to keep binaries small (this is still on our wish
list), remote procedure calls for inter process communication.
It is strictly modularized with its own dedicated process for
every major task.

• Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

• The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

• A console monitor to watch ongoing activities

• Speed optimization

• An internal clx protocol

• An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

• 00Index

• clx_200.tgz

• install.clx

• README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-
commercial use, but the authors want to keep track of who is
using their product, so before you can actually use the software
you have to ask for an encrypted callsign string to be placed in
the configuration file. You must send mail to
<clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to
allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. DPTNT Terminal and BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than

the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or

ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG
<http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>
Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.
Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring

of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.
5.12. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@triode.apana.org.au>

Description
An implementation of the Radio Shortest path First routing protocol for linux. The daemon supports version 2.2 of the protocol which corrects a lot of bugs and problems that were present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It addresses some of the quirks of RSPF v2.1, the version in NOS which means that it is incompatible with the NOS version. It will also allows remote/local queries via a tcp session for debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:
Craig Small vk2xlz <csmall@triode.apana.org.au>

5.13. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, <mwestfal@.csci.csusb.edu>

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.14. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, <csmall@triode.apana.org.au>

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and

convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

cd /usr/src
tar xvfz ttylinkd-0.02.tar.gz
cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
make
cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
killall -1 inetd

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright
GNU Public License vers 2.0
6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely

redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks. Andrew is working on an X-Motif version to be
released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz>
and sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath, veliaa@rpi.edu

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.8. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.
System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
```

<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life

shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture
of the earth onto your X Windows display. It offers either an
orthographic view as you would see from space or the map like
mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?

Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

<terry@perf.no.itg.telecom.com.au>

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

There's a construction article with schematic in the 1995 and 1996 editions of the ARRL Handbook, which originally appeared in the Feb. 1993 edition of QST.

For more general info on computer control of your 850, see the Kentrol Web site referenced below.

Howdy Scott. For San Diego repeaters go to URL:

http://bookworm.sdsu.edu/repeat39.html

For LA and area go to ARTSCI at URL:

http://home.earthlink.net/~artsci/repmain.html

Give us a call on the PARC repeater on Palomar Mtn 146.73 minus split no
PL required.

If you coming to San Diego -- visit our Club page at URL:

http://www.electriciti.com/parc/

Has vistor info, attractions etc. as well as many Ham related links, DX,
Contest, Swap Meets, ARRL and much more.

Yes, novices were required to use crystal control from the
inception of the license. It's not that they "got to
start". They were always required to use crystal control.
Your question would be better asked as "When did novices get
permission to use a VFO?" I don't know the answer to that
one. 73, N2JB ex-WN2LGG in 1952.

>thats right, you said you were a NEW guy. When you say ham 'equipment', you're
>probably referring to a Radio Shack HT, right ?

Not so fast. Back when you paid $1400 for a top of the line radio, a new car cost $5,000. Today they cost over $20,000. Back when I bought the top of the line in 1964, a B&W6100 cost $895, but a new full size Chevy cost $2100. A 1964 dollar is equivalent to 9 1995 dollarettes, so that old B&W is equivalent to a $8055 dollar radio today. The dollarette isn't what it used to be, but compared to the price of other goods, amateur equipment is cheaper today than ever before. In 1964, the average teenager working a summer job would have needed over 6 months to earn the money for a B&W6100 (and that's just a transmitter). In 1995, a teenager would only need to work for about 2 months to earn enough for a IC-706, and that's a heck of a lot more radio.

And while the old B&W has been reliable, I've had to replace tubes, paper electrolytic capactitors, pots, switches, etc to keep it going. Today's all solid state rigs don't need periodic tube replacement, use improved tantalum or aluminum electrolytic capacitors that don't dry out, and optical shaft encoders. My IC-735 is now 9 years old, and the only thing I've ever had to do to it is resolder a cold solder joint in one of the bandpass filters. And that was when it was nearly new.

Reliability is way up, costs (in constant dollars) are way down, and the functions available on some of the newer radios weren't even dreamed of 20 years ago. The technology didn't exist to do some of the things we take for granted on the newer radios and associated equipment. In 1964, operating a digital mode meant a lumbering noisy Model 15 with a 60 mA loop supply (ouch!). And a huge rack mounted receiver and transmitter which, if not crystal controlled, required constant attention to keep tuned. Today, it's a tiny low power box of solid state electronics that's completely silent, doesn't spew chad all over the shack, and does a better job of printing weak stations using PACTOR or Clover than the old

Mod 15 and TU could ever hope to do. And when we set the radio on a frequency and adjust the variable filters for a nearly perfect matched filter condition, we can walk away and fully expect it will still be on channel and operating when we come back.

When you compare old equipment to new equipment, you're comparing a stone axe with a loose rawhide binding to a fiberglass handled tungsen nitride treated super alloy axe that's as at home cutting through sheetmetal and plexiglass as it is cutting through pine, and which costs fewer manhours to possess to boot. When equipped with a few accessories, it becomes a nitro burning supercharged chainsaw, but it doesn't require the output of Niagara Falls to power it, or RFK stadium to house it. Progress, it's a wonderful thing.

>frequencies by as little as a few hertz to avoid interference. True, the
>frequency you use requires bandwith, where sidebands occupy the immediate
>frequencies adjacent to the carrier, but this is NOT a channel.

This is precisely and exactly a communications channel. Any modern communications, signaling, or information theory text will use this definition of channel (using a somewhat more precise formulation of course, including a channel media descriptor [there are wireline channels, radio channels, optical channels, even sonic channels] and other pertinent information such as notes on channel impairments like noise, multipath, etc, and contextual information like signaling rate, modulation form, coding used, etc). The usage of the term channel you describe below is mere legalese, of interest to bureaucrats and their enforcement agents (hired muscle, goons, etc), but of little value to those whose interest is radio technique, IE radio amateurs, radio engineers, communications specialists, etc.

>A channel is assigned by the governing communications body of the country,
>or by international agreement.

It is ironic that supposedly technical amateur radio operators would want to avoid the technical definition of a communications channel in favor of a bureaucrat's definition of what is in substance a regulatory artifact. We have to be cognizant of the bureaucrat's definition, of course, if we want to keep his jackbooted enforcers from the door, but that's just political, not technical.

Communications channels may be numbered for convienence of reference, or they may be named, or neither depending on the context of the usage of the term. Nothing intrinsic about a communications channel requires it to be either numbered or named. Like the spectrum, it simply exists when we attempt to impress intelligence on a carrier. It is a fact of nature that we try to understand and use. Shannon provided us with the fundamental knowledge we need to understand and exploit a communications channel. He was not a bureaucrat, nor was he using a bureaucrat's terminology when he spoke of communications channels. Neither should we, unless we're dealing with a bureaucrat at the time (an ugly and distasteful business at best).

>are between those two frequencies?

In theory, there are an infinite number of channels between those
frequencies. In practice, most HF radios using a tuning step of between
1 and 25 Hz, so there could be as many as 1000 discrete channels or
as few as 40. So what?

>>On a 2m radio, the channel bandwidth is usually greater than 5KHz,
>>but every frequency you operate on represents the center of a channel.
>
>Really? What's "Channel 19" on your 2 meter radio?

I don't have a 'channel 19' on my 2m radio, unless you're
referring to memory channel 19, which isn't currently programmed.

>A "channel" might be a 'narrow band of frequencies used by a radio
>transmitted', but they are also a "standard", in the sense that a group
>of people must agree on what "Channel 1" represents.

No, Mike, you're simply wrong. While some services might have
standard frequency and bandwidth assignments with associated
numeric identifiers, that doesn't mean that every possible
'channel' has to have a standard frequency and bandwidth assignment.

>Since there is no such "standard" or "good amateur practice" which
>dictates the definition of "channels" in amateur radio, your claim that
>ham radio uses "channels" is demonstrably incorrect.

Nope, Mike, the assumption you base your claim on is simply false,
and I'm not incorrect, though I'm probably silly to attempt to have a
logical discussion with you ;-).

>
>My Oxford dictionary makes no mention of frequencies under the definition
>of "channel", so let's stick to the common communicator's usage.

After this comment, I probably shouldn't reply to anything else in
this note. Not just one, but two different Webster's dictionaries
(New Riverside and Collegiate) both include a definition of
"channel" relevant to radio communications. The English language
evolves - does your Oxford dictionary include definitions for
commonly used terms such as "semiconductor", "microcomputer",
or perhaps "cw"? If not, does that mean these terms don't have
meanings today? You're saying "it isn't in my dictionary, therefore
I can define it to mean anything I choose". That just isn't correct,
Jeff, and you should know that.

>>So, Jeff, all of these frequencies you mention are center frequencies
>>for CW channels.
>
>Oh? What if I tweak my 7030 kc xtal to 7030.5 or 7031? Two new channels?

These are different channels since the center frequency is different. Remember,
a channel is really just a center frequency and bandwidth.

>We think of a "channel" as being a fixed frequency given a designation
>that a certain group of users understand. The HF marine channel 507

>and the VHF marine channel 16 are known to maritime radio users. By
>law they must operate on certain fixed frequencies. Operators in the
>Citizen's Radio Service are also bound by law to operate on certain
>fixed frequencies - every CB operator knows the purpose of "channel 9."
>On the other hand, amateurs are allowed to be frequency agile; no other
>radio service (except the military) is given this privilege.

If you look in the relevant CFRs, you'll see that all of these
service-specific numbered channels have a defined bandwidth and
center frequency. In the context of particular services, they've
also got an arbitrary number. So what? CB channel 12 the same as a
10KHz bandwidth with a center of 27.105MHz.

>Now, some want to consider 2M frequencies as channels. If so, there
>would have to be a uniform designation scheme provided for this collection
>of channels. What is it? Is operation between two channels permitted?
>If so, shouldn't a frequency between two channels also be termed
>termed a channel?
>
>Channelization is contradictory to the amateur's frequency agility.

Perhaps, but you're discussing apples and oranges here, Jeff. The term
'channel' clearly does not require the use of pre-defined center
frequencies, though some radio services do specify channels this way.

>>What a nice reflection on amateur radio when people mistakenly get
>>their underwear in a bunch over the use of a common term.
>
>It wasn't a common term in the ARS, but like Roger Beeps and the 10-code,
>our once unique culture is being diluted to a level some find a bit
>nauseating.

Oh, I see, the simple fact that CB radios have 'channels' means that
amateur radio can't. Right. I'm not crazy about roger beeps, 10 codes
and ridiculous Q signals, but I'm not so afraid of CB that I'll make
illogical arguments against using terms like 'channel' just to
avoid using some term in common.

Come on Spew. Here you've been being nice and now look at ya.
Back to your old tricks. What 'seasoned' hams have ever refused
to talk to you ? For that matter, do you own a radio ? Everybody
else is complaining about the OLD guys trying to piss off the NEW
guys, and here you are trying to discourage a new guy. Did you
graduate to being an 'old' guy all of a sudden. Or are you just running
out of pins ?

Easy Jeff!

You are correct the taking off in a sailboat over the ocean with just a hand held GPS and a spare battery (and no knowledge of navigation) is pretty dumb.

But I don't think Steve meant to say that. I think he trying to point out that GPS is going to make other forms of radio navigation obsolete - and it sounded like he was primarily addressing aviation (since this thread seems to be discussing VORTACs). And I think he his right.

GPS is going to make maintaining most terrestrial, radio nav aids obsolete just based on economics. They could start shutting down VORs tomorrow and it would suit me fine (I know that others would be left out in the cold so I won't advocate such a shut down).

I don't believe that Steve is advocating the elimination of basic navigation skills. He knows that when the cockpit "lights" go out he will be left with a compass and his watch (I don't personally know any pilots that pack around a sextant in their flight bag).

I believe he is correctly pointing out that there will be a time when most of the nav gadgets we stuff into the panels of our planes won't be necessary. The only reason we have multiple systems now (VOR, DME, LOC/GS, ADF, etc.) is because, until GPS gets into full swing, none of these present systems gives us everything we need when they stand alone.

>It's fine to be a danger to yourself, but do think twice about making
>such dangerous statements to others.

I don't think he said anything dangerous.

Except ... MAYBE this part...

>> Navigation can now be a completely
>>passive thing.

>You'd best stay on land.

Jeff, I'd say the same thing after a sentence like that. But I think Steve just didn't pick the right words. Navigation will likely become more of a "sit back and watch" operation. However the person doing the watching better know how to continue on to saftey if the electronics go Tango Uniform.

Many have talked about the next generation of aircraft that will require a crew of two A pilot and a dog. The plane will fly and navigate itself. The pilot will be there only to monitor the systems. The dog will be there to bite the pilot's hand if he tries to touch anything. ;)

The repeater in question is the 145.15 repeater in Starke, FL. The
input freq. is 144.55. The pre-mod minimum xmit freq. is 144.60. I
had to do the extended receive mod to use the repeater although I have
to do the offset manually.

Hi ...

The MSYS Windows rewrite would be a major project. Rather than
just rewriting MSYS for Windows ... and I would bet it would be for
Win95 ... it would require a tremendous amount of restructuring.

In the end you would have ... MSYS. Same stuff, really. Text
message forwarded here and there. The only real advantage would be
that it would interface nicely were you to want to run an Excel
spreadsheet. What advantage is that when it runs fine on a really
cheap 386/40? Why not have a computer dedicated to MSYS and play
Quake on your Cyrix next to it?

What we would loose is the ability to run it on a Hewlett
Packard HP100LX palmtop that fits easily in your shirt pocket.
We would also loose the ability to take it on the road on our older
8088 laptops.

Message-ID: <199608030300.WAA13643@future.cnmnet.com>
Source record: 219741

hello,
I'm writing to tell you of a problem I'm having with a group of radio operators. i would like to know what you think. every night between the hours of 12:00pm to 1:00am CST me and another radio operator, WB9YHQ get on 146.955 MHz. and chat. Now WB9YHQ has PL Tone and I don't so I have to talk simplex on 146.955. Now the people complaining are not on at that time and when they are on they make noises and tell me to get PL Tone and harassing me by threating to get a restraining order so i can't talk on the frequecies. Now one of the persons who is complaining gave me his microphone because mine went out last summer. He then recored me and played it to the field office of the FCC to back his case that i was talking simplex on a repeater frequency. They claim that a new Public Law was passed and was published in the ARRL NEW FCC RULE BOOK by Norm Bliss WA1CCQ. this so call new public law was a letter written to the Tri State Repeater council by the FCC back in 1983 to settle a Dispute between a coordinated and a none coordinated repeater. It has nothing to do with me nor is it a "new law". One evening another ham operator came on and he too dose not have PL tone they told him to come back anytime. One evening I was talking to WB9YHQ and I told him I was sick of what was going on and was going to run a MUD on packet and these same people go on and asked what Frequency it was going to be on 147.555 MHz which is a packet frequency. they informed me if I put it on that frequency that would complain that I'm causing interference to their packet units. now MUD also run timesharing like the rest of packet. they have even threated to get a restraining order on me to keep me off that frequency as well. Now you would think they would be happy i'm leaving 146.955 MHz. but No! they have to complaining about that too. Now WB9YHQ had no problem with me talking on 146.955 the only ones who are complaining is these people not on the radio at that time. I feel also that there is no problem and since WB9YHQ is the control operator they i feel they have no say in the matter. And if one of them knew it was illegal why did he give me his microphone and isn't what he did by playing for to the FCC entrapment? so what do you think.?

Hello Bill,

This is Phil, KB8LUJ. I used to do a lot of writing about this subject. Here are a few facts. Actually telegraphy goes back a long way before "wirelne common carrier", namely the ancient Greeks who used mirrors (day) and fire (night) to flash signals. In 1792, the Optical Telegraph (a system of poles and flags that rotated freely over a differential of 45 degree). The different positions on two flagged poles could represent about 8500 words. (92 pages of 92 words ea) The system was actually decommissioned just around the time of WW-I.

Now Volta discovered electric current about 1805 and Morse (who was actually an artist) got the idea for a signalling system he called the 'telegraph' in 1832. He received the patent in 1838. It was 1844 before he could convice people (ie Congress) of the benefit of his device. In 1855, Ed Hughes is credited with inventing a drum device to print messages. In about 1870, Roland (in Italy) used 60Hz AC to send 8 dispatches in parallel. Baudot, a Frenchman, invented Baudot code in 1877 (the Hughes device had 28 possible 'bits') and the Baudot system (went on line in Italy) could send two to four messages at one time (depending upon importance to the use of the wireline).

So, to technically answer your question, machine sent code started in 1792. Wireline, with Morse, in 1844 and 5 level (bit) Baudot in 1877.

By the start of the 20th Century (1900), Frank Pearne got Jay Morton (Morton Salt Co) interested in the printing telegraph and consulted with Charles Krum (who worked at Western Cold Storage, run by Mark Morton, Jay's borther ..Yeah, I know, Krum was an inventor, but he had to do something to earn a living.) Krum, and his son, Howard at first experimented unsuccessfully. In 1906 Pearne quit and became a teacher. Krum kept at it and in 1908 ran their first tests (Chicago and Alton RR) and concluded that mechanical was far better than 'hand'. They decided to make a 'complete' device. Although they had good results, they also found requirements 'exacting'. Morton paid the bills, which were sizeable. The equipment became more accurate and needed less mechanical attention.

Western Telegraph, the common carrier of the day, was very slow to abandon manual Morse. After all they could find many good Morse operators for very low wages.... It was in 1914, when Kent Cooper, of Associated Press (AP) asked Morkrum Co (the teleprinter company founded by Morton) to install one of their devices so that he would not have to send copy boys (messengers) to every Newspaper in NYC with a story.

The original 'teletype' was a converted Oliver Typewriter. In 1910 they had worked out and patented a synchronization process for their GreenCode printer. The idea of multiplex arrived in about 1917.. where parallel lines evolved. The first 'conventional' teletype was the Morkrum 11 of about 1919, followed by the Type-12 in 1924. Now Kleinschmit held printer patents, leading to the merger with Krum, into Morkrum-Kleinschmidt (later renamed Teletype Corporation) and the introduction of the 15-Type.

In 1930, the Bell System (AT&T) pooled resources with Teletype.

Any other questions?

I'm still a bit puzzled why the FCC (evne with their limited resources)
haven't jumped on this mess. If I was the owner/trustee, I'd probably
convert this machine to high speed packet use only.

At the hamfest, someone said this machine is like a "Roach Hotel", that
the roaches would scatter and contaminate the other machines if shut
down. I don't think I necessarly buy this arguement....

I use profanity as much as the next guy, but not on the air.

I am in the process of packing up to move back to Georgia next
month but my radios and computers will be one of the last things to be
packaged so I am game. Almost any time will be good (Tuesday nights
are not). Just let me know.
BTW in another post you said:

> If you are German it is in your genes to kill and torture.

My sister was born in a US military hospital that was on a US military
base with the American flag flying overhead near Frankfurt. Inspite of
all that she had to become a naturalized American citizen as by US law
at the time she was considered a German citizen. Those regulations
have been changed so that if she were born in the same situation today
she would be an American citizen by birth. Isn't it wonderful that
genes can be regulated by legal codes!

As you might be aware, the FCC has set Jan -1, 1997 as
a compliance date for all US ham radio operations to comply
with NTIS Bulletin 65 with respect to RF exposure limits.
This would SEVERELY affect operators of FSK and PSK
because they are considered 'continious transmissions'

There is an FCC imposed exemption for any transmitter
UNDER 50 watts. Over 50 watts, a ham must insure that
he complies with NTIS-65.

I am looking for a copy, preferably on-line, of NTIS
Bulletin 65.

Can anyone help on this?

You're certainly correct that bandwidth sets a limit to how many
active channels can occupy a given amount of spectrum, but that doesn't
mean that there aren't an infinite number of channels. People are
still confused by the "40 channels AM, 80 channels SSB" claims made
for some CB radios. We all know that there aren't 120 channels in
CB that can be used at the same time, but there are 120 channels
one can choose from. ;-)

What do you think of the following message I received?

Date: Sun, 03 Sep 1995 21:55:54 -0400
To: k1oik@ccsnet.com
From: Ruthie Cunliffe <ruthie@eznet.net>
Subject: ham??

Dear Burt,

Your bizzare ramblings in the misc ham newsgroup have been rather entertaining.

I'm curious as to why you bother keeping your ham radio license if you think all hams are rotten to the core?

I'm also wondering if you are the least bit aware that if it hadn't been for Jews in the first place, Hitler wouldn't have had any reason to go on a rampage and possibly that would have spared the lives of many Germans, Italians, Poles, Russians and many other ethnic groups? Should we hate ALL JEWS for even exsisting because if they hadn't possibly my relative would ...have been spared rather than put to death (not a Jew, a German who was ill and was encarcerated and put to death during WWII)?? Thankfully I do not live in the past nor do I carry hate and unforgiveness in my heart and soul. My life is much better because I don't. Try it, you might like it.

A couple points I thought about making in the newsgroup but since I am not one to regularly frequent that newsgroup and also don't wish to embarass you

in public (you're doing that just fine all by yourself) I choose to make these points in email:

YOU did not live through World War II. YOU did not spend time in a concentration camp. YOU haven't a clue what the word NAZI means. YOU don't have much reason to be proud of your heritage as an American now do you??? How many Native Americans were slaughtered by Americans? How many Africans and other ethnic peoples were tortured and died due to being enslaved by AMERICANS??? How many people died due to the AMERICANS using nuclear warfare?? How many Jews, Germans and others died during WWII during the intentional fire bombing of cities such as Dresden???

You should think about some of these things before you open your fat mouth. If you're babbling in the newsgroup is just for entertainment then keep at it and anyone who is not a ham and happens into that newsgroup will possibly think that all hams are like you. But if they stick around awhile they'll realize that you're nothing but a bag of wind with little if no intelligence behind what you say. Oh..and the .gif file idea was a real scream!!

My sympathies, Burt, if you're doing this for more than
entertainment....your life must be really empty and full of hate.

CUL, Ruthie

Here is my response to Ruthie (AA2IO)with some of her comments included:

Ruthie said:

RU>I'm also wondering if you are the least bit aware that if it hadn't been for
RU>Jews in the first place, Hitler wouldn't have had any reason to go on a
RU>rampage and possibly that would have spared the lives of many Germans,
RU>Italians, Poles, Russians and many other ethnic groups? Should we hate ALL
RU>JEWS for even exsisting because if they hadn't possibly my relative would
RU>have been spared rather than put to death (not a Jew, a German who was ill
RU>and was encarcerated and put to death during WWII)?? Thankfully I do not
RU>live in the past nor do I carry hate and unforgiveness in my heart and soul.
RU>My life is much better because I don't. Try it, you might like it.

I replied:
Ruthie your message is going public. People need to see what you are
made of. You are a total pig. You are blaming the victims for the deaths
of others. So if you were raped the attacker ought to get off because if
you were not there he would not have raped you. And thus the rapists
family ought to hate you if he winds up in jail because of what YOU did
by being there. I do not hate today's Germans but I hate that in them
that caused them to sell to Iraq germ warfare. But it is clear you
despise Jews for in your words they existed and therefore caused the
Nazi actions.

Ruthie said:
RU>How many Native Americans were slaughtered by Americans? How many Africans
RU>and other ethnic peoples were tortured and died due to being enslaved by
RU>AMERICANS??? How many people died due to the AMERICANS using nuclear
RU>warfare?? How many Jews, Germans and others died during WWII during the
RU>intentional fire bombing of cities such as Dresden???

I replied:
The American actions against Indians pales against the Nazi acts. There
is NO comparision. Slavery has some comparison but still pale against
the Nazis and white America paid for those mistakes and are still paying
dearly. As far as nuclear warfare it SAVED lives. Fire bombing was
necessary. If you start afight you ought not be surprised if the victim
fights back.

RU>My sympathies, Burt, if you're doing this for more than
RU>entertainment....your life must be really empty and full of hate.

Please do not judge me based on your character (of course if I even
ascribe to you the fact that you have ANY character, that is a stretch).

Say, have you checked out BDX Radio Ltd's ham radio website at
www.bushdog.com? Go take a peek! There are some great pix from the
Canadian Arctic, and descriptions of the 4 Week Licensing courses that
they offer.

Cheers,
Dave VA3UE

281. HF FAX program?

Can anyone give me the name (and download location) of a good FAX
program that will work with my PK-232? I have the original PK-FAX
program, but that is pretty limited. Thanks in advance for your help.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 AUGUST AND FORECAST FOR 05 AUGUST - 07 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 78/17

GOES satellite data for 03 Aug
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 7.8E+07 (normal)
X-ray background: A6.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 Aug 06 Aug 07 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 Aug: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 03 Aug
Learmonth 6 2222 2212
Fredericksburg 8 8
Planetary 8 7

Observed Kp for 03 Aug: 2323 2122

2B. MAGNETIC FORECAST
Date Ap Conditions
05 Aug 8 Quiet to unsettled
06 Aug 5 Quiet to unsettled
07 Aug 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
04 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
05 Aug Normal Normal Normal
06 Aug Normal Normal Normal
07 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
04 Aug 11

Observed Australian Regional MUFs:
Darwin, Sydney: Near predicted monthly values,
with spread F during local night.
Townsville: Near predicted monthly values.
Hobart: Near predicted monthly values with
blanketing sporadic E during local night.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
05 Aug 10 near predicted monthly values
06 Aug 10 near predicted monthly values
07 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

Hi OM's,

I sure remember the old ARC5's, and all the FUN back then.
I am not sure if it is the exploding technology, or just society caving in, but the old hobby is just not what it used to be, to me. I have more fun on the internet now.

Especially the last few years, enjoying more adult activities, with several lady friends, and now a lovely XYL (who has NO interest in ham radio).
But, she keeps life VERY interesting.

After all this and 10 years of riding on paramedic units, I guess I have found that there IS life, besides amateur radio...

(and this is from a real radio addict, in earlier days)

Maybe some day the old magic will return, but I doubt it...

Thanks for the memories!

>73, Jim KH2D

And it is, of course, simply wrong. While there may be times when
you can only get 3 blocks range from a 220 HT, there are also times
when it can reach 60 miles or more (such as when it contacts that
distant repeater station on a mountaintop, which could just as well
be another HT equipped user in the same favored location). It all
depends on terrain and propagation as to how good the range will be
in any given situation. For lucky West coast HT users, the north
Pacific duct will even allow them to contact Hawaii from time to
time. That's a wee bit more than 3 blocks.

I haven't seen that, but I have seen RF feedback drive the PLL
out of lock when using high power with the duck. That gives
you an ERR2 condition, but I wouldn't say it drives the microprocessor
wacky (what's the precise technical definition of "wacky" anyway?).

>something can be given the name of "channel" which is incapable of
>passing data?

Careful. It is easy to get confused when talking about infinities.
How many real numbers are there between 0 and 1? There are an
infinite number of them. The way you prove that is that for every
pair of numbers you select, I can select a number which fits between
them in the sequence. Now how narrow can a communications channel be
and still convey information? If you are willing to lower the information
rate, each channel can be arbitrarily narrow. For every channel width
you can present, I can present a narrower one by lowering the information
rate. There are an infinite number of choices between 1 and 0, so I
don't need to go all the way to zero to fit another one in. Hence there
really are an infinite number of channels I can fit between any two
other channels.

Let me put this another way, what is the result of infinity/2?
What is the result if you divide infinity by 3? By 10? By 10^6?
The answer is still infinity. When you divide infinity by a
finite number, the result is always still infinity.

How many angels can dance on the head of a pin? Depending on the information rate, and the modulation used, there are zero or many channels in between. We can make a channel arbitrarily narrow by lowering the information rate, so we can have an arbitrarily large number of channels between those two in principle. In practice, we don't have equipment to support arbitrarily narrow channels, so the answer is finite.

>ham radio uses "channels" is demonstrably incorrect.

That is the bureaucratic usage of the term channel. If you insist that radio amateurs are bureaucrats rather than technical in their nature, then I suppose you can insist on the bureaucratic usage. However, if you believe that amateurs are those with an interest in the radio arts, as called for in both the ITU and FCC service charters, then you'll use the standard technical meaning of the term as used in communications and information theory texts.

Channels need not be either numbered or named. Like the spectrum,
they simply exist, a fact of nature inherent in the application
of information to a signal. As Shannon demonstrated, the notion
of channel is critical to the understanding of the way information
is transmitted. Of course if you wish to insist that amateurs
should be ignorant of how radio works, then you won't use channel
in this way.

Just as you are completely dependent on someone else's radio for
any two way communications other than between two radios which
you personally own, You're always dependent on someone else's radio.
The only difference with repeaters is that it may require two or more
of "someone else's" radios to establish the communications channel.

>>>You need to qualify what you're saying. Here in repeater-rich Southern
>>>California, an HT will get you connected with about all you'd ever want.
>
>Really? Tell me how to use a SoCal rptr to yak with Jim in Guam.

Who in their right mind would want to do that? :-)

If you were to choose the right time (and that's always a factor
with HF), you could use one of the 222 MHz->10m repeaters in
SoCal to reach Guam. Or use one of the sat gateways to reach
Guam. That's hardly what the typical VHFer is interested in
doing, however. Dx fever hasn't infected too many of the VHFers
yet (and hopefully never will).

>My Oxford Dictionary Of The English Language contains no mention of
>"frequency" in its definition of "channel."

What does the Oxford have to say about wavelets, or linear time invariance, or forcing functions as used in communications? When dealing with a specialized technical subject, it is best to rely on the technical definitions used in that field rather than to look in a general dictionary. Try opening a textbook on modern communications or information theory and see what the authorities in the field say the definitions are.

Try looking up "hooker" in the Oxford. There are two very different definitions depending on the profession using the term. It means one thing in the textile industry, and a very different thing in the world's oldest profession. You'd feel sort of foolish using the latter meaning when discussing textiles with a textile engineer wouldn't you? And you might confuse some poor lady if you used the textile meaning while cruising the street (though she might just think you were kinky).

Shannon would say yes in each of those examples. Any modern communications
or information theory textbook would also say that they are channels.
The uses to which bureaucrats or the lay public put the term channel
aren't really relevant to those whose purpose is the exploration of the
radio arts. We should use the technical meaning of the term as it is used
in the communications field.

>thats still going on, seems I just read the ARRL is going to start
>paying people to do it.

The ARRL is going to start paying for the *databases* that they've been
using for free from the coordinators in the publication of their
repeater directory. That's not the same as paying people to coordinate
repeaters.

>2. Repeaters tend to break hams up into small (unfriendly) groups.
>
>When I lived in the U.S. I traveled many times up and down 95 between
>Florida and Washington D.C. Trying to find someone to talk to on any

>heard someone on one of the MD. repeaters 'This is W9VAC passing thru
>on vaction, anyone around ?' which was usually followed by 'W3LID
>this is W3KID' - i.e., we are here, but we don't want to talk to you.

Repeaters serve as gathering places for people of like minds and
like interests. They are like waterholes, places to congregate and
socialize, but the lion and the lamb often don't drink together
since their interests are divergent. Some repeaters are setup
expressly to serve the travelling amateur, but most are not. They
are setup to serve a segment of the *local* amateur community.

Each community has its own personality, and every repeater is a
community. Some are open and welcoming of every stranger who
wanders by, but most want to look him over and take a bit of
time before inviting him to sleep with their daughters.

I find that repeaters which are less frequented by travelling
yankees have a warmer welcome than those who must suffer under
that sort of invasion frequently. But that's purely a Southern
perspective. We still haven't warmed up to carpetbaggers.

>3. Repeaters give hams (especially new hams) a very false sense of
>their communications capablitites. They tend to make people very lazy

>when it comes to equiping themselves. 'Why should I put up an antenna
>for 2 meters ? I can hit the repeater with my HT from any bathroom in
>the house ?'.

That is true to an extent. However for many hams, outside antennas
are impossible (covenants), and even if they could put up such an
antenna, the number of stations they could work direct would still
be depressingly small due to the relatively sparse amateur population
and local terrain. And among that small number, the likelyhood of
finding many of like mind and interest is low. Repeaters allow more
geographically diverse communities to form. By being able to draw
from a larger area, the repeater makes it more likely for a sustainable
group of like interests to be created.

>4. Repeaters don't teach hams how to pool their resources for a common
>good. People don't like a repeater for one reason or another, so they
>go put up their own. In a place as small as Guam, we have had as many
>as five repeaters on VHF at one time. For an area 35 miles long and 6
>miles wide. None of which covered, or do cover, half the island. All
>of which could have been combined into a system with remote receiver

>given time in Guams history there haven't been five hams on two meters
>at the same time, but we still need five repeaters. Sure, in an area
>where there are a lot of hams, there are a lot of repeaters, and they
>are busy all the time. Busy with what ? Busy with people talking for
>the sake of talking, not for communications purposes. Fred and
>Charlie might be two blocks apart, but they rag chew on the repeater
>for an hour, about nothing.

Repeaters most certainly do teach hams how to pool their resources.
Few repeaters are created, funded, and used by a single amateur.
Almost all of them are group endeavors, designed to serve a particular
group. Your experience is atypical on Guam. It may be the result of
having such a small pool of amateurs that you can't attract a critical
mass of those with like interests who would support a repeater for
the group.

As to Fred and Charlie, the reason they may choose to use the repeater
is so that other of their friends scattered over the geographically
large area the repeater covers would know they are on and available
to chat. When people sneak off behind the barn to talk, it is darn
hard for others to find them. If they meet on the front porch of the
general store, everyone knows where to reach them.

>5. Autopatches don't promote a 'we' attitude, they promote a 'me'
>attitude. Lots of people are interested in repeaters for one reason -
>the autopatch. Take that away and see how many users stop paying dues
>and go to another clubs repeater. With todays cellular phone systems,
>I can't see why anyone would want to use or need an autopatch.
>All this crying about CW being 'ancient' and 'outdated', how did
>autopatches get overlooked ?

I agree totally with this. Autopatches are as anachronistic as CW,
and of as little real use. I won't have anything to do with them.
I cannot understand why some people feel it necessary to interrupt
a conversation on a repeater so they can call their wife and tell
her that they've just left a place *with a lot of telephones* and
are on the way home. Presumably the call is to warn her to get her
lover out of the house since it contains nothing else of substance,
but since the call is made at the same time every day, you'd think
she could just set an alarm instead.

>
>I love my coal-fired Hallicrafters, which _does_ tune frequencies :-)

Your Hallicrafters uses communications channels just the same as any
other radio. It has nothing to do with how the radio tunes. It has
everything to do with the occupied bandwidth of the signals emitted
or received. Open any modern (post-Shannon) textbook on communications
or information theory and you'll find that a channel is not some
bureaucrat's numbering scheme, it is the band of frequencies over
which information is passed. And *every* information bearing signal
occupies a channel, even OOK Morse. When you move outside that band
of frequencies, you've changed channels. Whether you do it in discrete
steps or in a smooth analog manner is irrelevant.

Note: most channels are finite, but Shannon showed that a channel
could also be infinite, and in fact that for a given information
rate the infinite channel works at the lowest CNR possible. We
don't really do this in practice because we don't have equipment
which can support the infinite channel. It is the insight which
pointed us to the advantage of spread spectrum, however.

>phones, and that they must be avoiding phone charges is ridiculous. That
>mentality suggests that the only communications that are acceptable on
>HAM is nothing; except tech talk, emergency or the weather or other hee
>hawing about nothing.

If you look at the ITU regulations, it says in part that the content of
amateur communications shall be, "limited to messages of a technical
nature relating to tests and remarks of a personal character for which,
by reason of their unimportance, recourse to the public telecommunications
service is not justified."

And Part 97.113(a) says "No station shall transmit communications
as an alternative to other authorized radio services, except as
necessary to providing emergency communications."

So the guiding principle should be that before you pick up the
microphone you should ask yourself if what you are about to say
is important enough that you would use a cellphone or pager for
the message if you didn't have an amateur radio handy. If the
answer is yes, the rules say you have to use a cellphone or pager
or a personal radio service like CB, GMRS, or the new FRS, and not
amateur radio for the message (except in emergencies relating to
an *immediate* threat to life or property where use of amateur
radio is always proper).

In my opinion, your wife isn't acting as an amateur radio operator,
despite having passed the test, because she *uses* amateur radio
exclusively as just a substitute for a cellphone or pager, and
those are prohibited practices. Note that this is a matter of *intent*.
Chats between wives and husbands aren't normally prohibited on amateur
radio, anymore than chats between unrelated people are prohibited, but
when that is the *exclusive* purpose for being licensed, the *intent*
to circumvent cellphone or paging charges, or use of another authorized
radio service such as CB, GMRS, or the FRS then becomes clear.

The FCC has relaxed its interpretation of the rules against conducting
personal business over amateur radio in recent years (the pizza rule,
etc), but it has done so with the clear intent that such usage should be
incidental to the ordinary uses of amateur radio, and not as the
exclusive reason for being an amateur radio operator. (The justification
is that such usages serve a self-training purpose, familiarizing one
with patch operations, for example, so that the amateur will be better
prepared for emergency communications if that becomes necessary.)

Amateur radio is not intended to be a substitute communications
utility. It is not to be used as a substitute for such utilities
as cellphones and pagers. It is a service for those with a personal
interest in the radio arts, to be used for self-training and technical
investigation into the radio arts without pecuniary interest according
to the ITU. The FCC adds that it should also serve to provide public
service and promote international goodwill. Both bodies recognize that
the amateur radio service has a role in emergency communications.
Neither recognize it as a substitute for *routine* uses of cellphones
or pagers.

It is obvious that your wife doesn't have a personal interest in
the radio arts, has no interest in conducting technical investigations,
nor apparently in supporting public service or emergency communications.
Thus she doesn't meet any of the primary criteria for being a radio amateur.
(No amateur has to fullfill *all* of those criteria, though a well rounded
amateur will participate in more than one.) There are other radio services
for people like her. CB, GMRS, FRS, and cellphones and pagers were all
designed for people needing a communications utility, but who have no
personal interest in the radio arts.

>
>It was petitioned by Radio Shack a couple of years ago and seeks
>to offer short range communications to families at camp grounds
>or within neighborhoods. No repeaters, yet, but transmitting
>from on top of a flag pole..... hmmmmm.....

Radio Shack isn't yet selling radios for the FRS. The radios
Abe saw advertised are for GMRS. Radio Shack has been selling
GMRS radios for a number of years. GMRS is what used to be
called Class A CB. It is UHF. Repeaters, mobiles, and handheld
radios are allowed. Power levels are similar to those permitted
in the Land Mobile service. HTs may be 1, 2, or 5 watts. In fact,
most land mobile service radios can be used for GMRS. It is a
licensed service.

The FRS is brand new, and no manufacturer has yet gotten Type
Acceptance for equipment to operate in the FRS. The target
date for availability is likely Christmas. It is an unlicensed
service operating in the "cracks" between GMRS channels using
low power, half watt max, and 2.5 kHz deviation. No external
antennas allowed.

This service may be a nuisance to GMRS users for a while, but
Land Mobile and GMRS are slated to have to convert to 2.5 kHz
deviation too in the near future. When that happens, there will
be no overlap between FRS and GMRS channels. The presence of
FRS stations may act as an incentive for GMRS stations to
convert over early in the phase in period.

Let me see if I can help you out. Goto Web Site:

http://www.qrz.com

You should find all kinds of Ham programs there. Click on FTP Servers
and then Files. You'll get it when your there. I found some good CW
programs there that have helped me out. The other guys are right. hear
the sound of a character and listen to all kinds of forms of CW (Code
Tapes, Computer Programs, HF Radio--I find the general CW band on 40
meters and the 30 meter bands to be active more than others and good
speed ranges) but the main thing is DON'T GIVE UP keep practicing and
MAKE LOTS OF CW CONTACTS. It's good for your confidence.

Jim

Down load some of the code practice programs from arrl bbs or one of
the mirror sites. Super morse is one of those programs.

They allow you to adjust the character speed to any speed ie 25wpm
and the character spacing to 5 wpm. As you recognize the characters
faster and faster your speed is increasing..

In navy school 1963 our class was first class to use this technique.
We had two hams in class and we suggested this and they had their
keyers using paper tape. Usual class speed at graduation was 16 wpm

our class graduated at average speed of 30 wpm. It works.

To go above about 35 wpm you need to start recognizing words, saves time in the putting characters together to form words. this will give you the chance to start copying at speeds of 45 to 50 wpm with comfort, but does take practice.

Hey all!

I'm having trouble with this newsgroup all of a sudden. I'm using Netscape for my browser, and all of a sudden, whenever I say "catch up all articles," it won't do it. Now my unread articles counter for this usegroup is up in the 330's. I am having this problem only with this newsgroup, and only in the past 24 hrs.

I tried unsubscribing, and then re-subscribing, and it didn't help. Does anybody have any ideas? Am I missing something here?

Thanks in advance for your help!

311. Timewave DSP-59+

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-04 00:00:00 UTC
From: "Clifford H. Gieseke" <cliffg@texas.net>
Message-ID: <32044DEB.682F@texas.net>
Source record: 219665

Has anyone had any luck using a DSP-59+ for noise reduction?
I bought one a number of months ago at a swap meet, hoping to
reduce background noise on SSB, but have found this unit to be
noiser when using than without. Only the automatic notch is of any
value, but the much cheaper Radio Shack device with auto-hytrodyne notch
works as well. ... Could the unit I have be defective? Its performance
is nowhere near what the company describes in its literature????

Cliff, W4ZFL

I believe it was in the mid 70s when the FCC decided that
novices could use VFOs and 250 watts input. It was the same time that
WN calls ceased to be issued to novices and novices with WN calls
received new callsigns, ie WN1XYZ became WA1XYZ.
At the time this occurred I had passed my General but had not
received my new ticket. I remember being excited when I came home from
class to find an envelope from the FCC in my mailbox. I was very
suprised to see an "upgraded" callsign on my ticket but the class was
still novice. About two weeks later my general came.
Talk about pain-in-the-butt callsigns, I was WN1VKN. That
caused some confusion in the novice segments! Even so I had a lot of
fun with a few rocks, an Eico 720 and a HR-10. The antenna was a long
wire up about 40 feet fed with a homebrew tuner. I managed to work a
little DX, KH6, LZ and ZF come to mind.
Now that I think about it, at about the same time the
previously mentioned changes occurred, I believe the novice ticket
became renewable. Anyway I am sure of the time frame.

I had one of the original Timewaves ($300) and it wasn't worth
anything either. I sold it. Yours isn't defective. You can find
them for sale all over the place.....must tell you something

Henry

A man went to a guts store to get some guts for dinner. He sees a sign remarking on the quality of guts offered at this particular gut store. So he asks the butcher: "How much for Engineer guts?"
"3 dollars an ounce."
"How much for teacher guts?"
"4 dollars an ounce."
"How much for ham operator guts?"
"100 dollars an ounce."
"Why is ham operator guts so much more?"
"Do you know how many hams you need to kill to get one ounce of guts?

The guys lives down the street, he also has friends that are bigger than me.
I invited him to bring along any friends he wished. He has not the guts
to even do that. He made his remarks thinking I was not around (more guts uh?)
I have challenged all ages. Maybe you would like to speak face to face?

> Burt I do agree WA1AOH should not have called you scum; it is an insult
> to scum everywhere. Have a nice non-confrontational weekend.

And you agree it was OK for him to insult my wife? He further
tried to expose me with false rumours in front of my daughter.
The guy is as phoney as they come. There is not a butt he has not
kissed .

SB DX @ WW $OPDX.265
Ohio/Penn DX Bulletin No. 265

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 265
BID: $OPDX.265
August 5, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2AEV, K6OZL, NL7TB, WB9PTN, AH0W/OH2LVG, DF4RD, DL8ZAJ, DL9GOA & DX News Letter, F6AJA, F6IIE, G4BUE & DX News Sheet, HL1SSG, and LA4LN following DX information.

5N, NIGERIA. The DX New Sheets report that Pete/W0AW, Mike/N9NS, Joe/K8JP and Vincent/G0LMY, will be active October 22nd to November 3rd, on CW/RTTY and satellite RS-12 and AO-13. They will also be active in the CQWW SSB Contest as 5N9N and are looking for two more operators. Contact Pete, W0AW, if you're interested. QSL via N2AU direct only.

5R, MADAGASCAR. Theo, DJ1RL, and Hans, DK8FB will be active starting on Monday, August the 5th. Operation will be until the 13th. Theo's callsign will be 5R8EY, and he plans to be active as usual in CW with most of his operations on 160 meters. He will transmit on 1824 kHz and listen on/between 1830 - 1832 kHz. He knows the window to Europe should be between 0200 and 0300z, but he is not sure of the window to North America. If it is not possible to work "Top Band" because of local QRM/QRN, Theo will be on 80 meters transmitting on 3502 kHz and listening 2 kHz up. Hans's callsign is 5R8EZ, and he will be active mainly on SSB with operations on 10/15/20 meters. QSL via homecalls direct or via bureau. Addresses are:
DJ1RL - Theo SEE, Breulgasse 13, D 63477 Maintal, Germany
DK8FB - Hans SEE, Fechenheimer Weg 49, D 63477 Maintal, Germany

5R, MADAGASCAR. Jean Michel will visit Gerard, 5R8EN, between August 18th and September 8th. He will operate as a guest operator or with a personal call sign. During this period Jean Michel and Gerard will try to go to Nosy Be (IOTA AF057).

CHANGEOVER. According to the ARRL Letter Electronic Update, dated August 2, 1996: "New DX Bulletin, DX Magazine publishers: Paul and Nancy Smith, AE4AP & KB4RGW respectively, will take over the DX Bulletin and the DX Magazine from Chod Harris, VP2ML. The changeover is supposed

to happen within a few weeks. The Smiths already produce The GOLIST, QSL Manager List and The DX Reporter."
The Smiths can be contacted via their new e-mail address at "dxpub@midwest.net" or write to DX Publications, PO Box 2306, Paducah, KY 42002-2306; Tel: 502-898=8863 (voice); 502-898-8864 (DX BBS); Fax 502-898-8865.

EL, LIBERIA. Carl, K4YT/DL4YT, has plans to be active for 2 to 3 weeks from Monrovia, starting August 12th. His callsign was not mentioned. QSL to homecall.

FK, NEW CALEDONIA. Hiro, JE5WIM, plans to be active mainly on CW from August 10-14th. QSL via homecall.

IOTA NEWS......
EU-73
EU-091. Tony, IK8VRH, Dom, IK8TWP and Tony, IW8BVN, will activate these two IOTA, August 10-24th. The group will use the callsign IK8TWP/IJ7. Activity will be on 20/40 meters CW/SSB. QSL to IK8VRH via bureau or via direct only at new address: Tony Bosso, Via Adda 57 (Parco Gaio), 80016 Marano -Na- Italy.
AS-081. Maemul Island in South Korea will be activated by Dongah University Amateur Radio Club in Pusan, Korea from August 9-12th. The call HL0BDU/5 will be used and please QSL to HL0BDU direct or via bureau.
NA-067. NODXA members Jim, KF8VX, and Cathie, KG8QL, will be returning to Okracoke Island off the North Carolina coast the week of August 18-24. QSL to home calls. Domestic please SASE. Foreign SASE or SAE & IRC or such. All DX will be QSLed 100% by bureau 60 days after they return if not direct.

IOTA ON THE SATELLITES. A group of operators will activate Bendor Island (IOTA EU-095) from August 8-12th, using the callsign TM5BEN. This island is located in the Provence Cote d'Azur Group. They will be active on all modes and HF bands (using the IOTA suggested frequencies), but also the satellites. Check 144.220, 432.250 and 1296.200 (SSB) MHz for terrestrial contacts. QSL via F5PVX direct or bureau.

JW, SVALBARD (More info and YLs!). Last week we mentioned that YL Unni, JW6RHA, would once again operate from here starting August 2nd through the 10th. She will be joined by two other YL operators Inger, JW8KT, and Turid, JW9THA. Some of their operations will be on a Kenwood TS-50 and Ten-Tec Scout transceivers, dipole antennas, and limited battery power. Suggested frequencies: 7048, 14248, 21248, and 28500 kHz SSB with possibility of some CW operation on 80-10 meters subbands. QSL to JW6RHA via LA6RHA, JW8KT via LA8KT and JW9THA via LA9THA.

KH4, MIDWAY ISLAND DXPEDITION. The August 1996 DXpedition to the Midway Atoll National Wildlife Refuge, (KH4 and IOTA OC-030), is pleased to announce that the operation will now include satellite modes. Joining the team as satellite operator is Pat Guerin, NH6UY, of Honolulu who is well experienced in satellite operating from a number of other Pacific

DXpeditions. The rest of the team includes AH0W/OH2LVG, W2UE, UA3AB and WA7LNW. QSL route for the Midway operation is Bob Johnson, KE7LZ.

KH6, HAWAIIAN ISLANDS. Eric, WB9PTN, will be on Maui from August 10-22th, signing WB9PTN/KH6. He will operate mainly on the WARC bands, and he will also try some low bands. He will also operate in the NA QSO party. QSL via 96 CBA or via WB9PGB.

TK, CORSICA. Paul, F2YT, will be active as TK/F2YT from August 18th to September 2nd. He will also try to be active from some coastal island.

V21, ANTIGUA (Now active on 6 meters!). A member of "Team Antigua", Alan, V21BF is now active on 6 meters. He states that there hasn't been any steady operation from Antigua for quite some time and is looking forward to helping everyone who needs a QSO on 6 meters from Antigua. (ed. No dates or times were provided. I will try to keep you updated.)

USI ALERT! Those who chase USI (United States Island Award Program), be looking for Pat, N0NYG, and Dave, K9FXH, to be active from a new Illinois island for USI Award on August 11th, starting around 1700Z. QSL w/SASE to K9FXH. For details on USI, check out their WWW page:
http://www-dx.deis.unibo.it/htdx/islands/usiarule.html
http://www-dx.deis.unibo.it/htdx/islands/usialist.html
http://www.owt.com/yquest/working/usislands/

WEB SITES FOR DXERS AND CONTESTERS....
All DXers and Award Hunters will enjoy this one! Ted Melinosky, K1BV, from "The K1BV DX Awards Directory" announces he has a WWW page which shows the rules for "short term" awards. The URL is:
http://top.monad.net/~k1bv

NEED TO KNOW how to receive a license from another country? Check out Veikko, OH2MCN, WEB page which has plenty of licensing information. The URL is: http://www.clinet.fi/~jukka/license.html

YK, SYRIA. The DXNL reports 20 operators (OMs/XYLs) from Germany will sign YK0B during the first week of October. Not only will this group operate on CW/SSB, but the group plans to also work on RTTY and the satellites. QSLs via DL8HCZ.

guts?

The Burtster is a real expert on guts, apparently he spends his HF time challenging 71 year old hams to physical confrontations. This a really dangerous undertaking and we should all applaud Bert's courage. Old Burt does challenge people more his own age if they are sufficiently far away. Sorry Burt I'm just not impressed with your schoolyard macho antics. If the guy down the street doesn't respond to your challenges it is out of maturity not fear. It is you sir who are the coward woofing on the internet where the possibility of a real confrontation is extremely remote. Perhaps you should try and learn some new social skills from your students.

Uh, not quite. The same is true for any _given_ frequency. For practical reasons, the very ones cited above, there are a FINITE number of frequencies. Yes, the the start point is infinitely variable, but above or below that point one may "squeeze in" only so many usable frequencies. Definitely a finite number.

This point is entirely a semantical one, typical of socially retarded nerds with too much time on their hands (and I mean that in the nicest possible way). Let us give it a rest.

>73 de WA3RVT, Steve

Steve,
There are several satellite related info pages on the net now. I only learned this past week that by about September, U.S. customers will have a choice of 4 direct satellite TV broadcasters.

Use any of the Internet search engines to look for PrimeStar, AlphaStar, EchoStar, or DirecTV (www.directv.com).

DirecTV, EchoStar and PrimeStar are active now (marketing in my area). AlphaStar either just went on line or goes online by fall (not sure which).

Most systems sell dual-TV decoders - in other words, one system that can independently select two signals and send to two separate TVs. So presumably, you can use 3 of these system to feed your 6 TVs.

Like most RF propagation obstacles, the attenuation through windows and walls vary greatly according to variations in materials, location, window size, antenna (or radiator) locations, etc.

We have several successful 'through windows' bi-directional amplifier installations with widely varing frequency bands and building/window types.

In general, a 15 dB "use factor" commonly included in the calulation will cover a clear glass and most green or brown tinted windows, BUT...

I have one case in a 50 story building that uses thick, highly mirrowed (gold color) glass that has a measured MINIMUM loss of 40 to 45 dB at 950 MHz regardless of antenna location within the room. It was also found that the window has such high reflections that multipath calcellations could result in a effective loss of over 60 dB. There may also be some aperature size related problems, but that could not be verified because we could not easily alter the window size at the time.

As a suggestion, you shouldn't cut a design too close. Even if the current situation indicates you will have a small, but usable, level margin chances are you will be back soon to add more margin to the system. In real life, signal levels always degrade due to uncontrollable external events such as somebody changes the building layout or the window material/window coatings. Also keep in mind that the new 'wireless' products that will be coming out soon may emit several types of interference and/or noise that reduces your systems performance.

Solving in-building and underground radio propagation problems is an interesting and challanging 'art'. Have fun and Good luck.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

The FCC has issued new rules regarding the evaluation of RF Emissions and
health effects from all transmitters. As always, the devil is in the details
and the details say that if you transmit over 50 watts, you may have
to perform an RF emissions environmental assessment of your Amateur station.
Under the new rules, the FCC will add five more questions on RF safety to three
of the written exams. Amateur radio operators will be required to certify as
part of their license application, under an as yet unspecified mechanism, that
they understand the FCC rules on this issue. In some situations, certain
Amateurs may have to file a complex "Environmental Assessment" better known as
an Environmental Impact Report regarding their Amateur station operation.

You can read the complete text of the relevent FCC ruling in FCC 96-396 at
Ham Radio Online magazine, available on the Internet at:

Why invent the word semantical when there are plenty of authentic
terms available? Anyway, and regardless of how poorly you think of
yourself, please jump into any thread you see me post to. It is the
inarticulate, unable to express themselves without personal abuse,
who give literate grown-up's that happy smug feeling of superiority.

348. Please Help with 10GHz Microwave Gunn Diode Assembly

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-04 00:00:00 UTC
From: sidener@crunch.nuc.umr.edu
Message-ID: <4u37s0$rp@hptemp1.cc.umr.edu>
Source record: 219702

Hi, I need some help fixing a Microwave Associates 10GHz Gunn diode assembly.

the model is : MA 86656 CM

I have two of them and I am trying to make a amateur data link but one of them has no output when I apply the voltage to the diode. I noticed something rattling around inside the assembly so I took out the plunger which holds the Gunn diode and found that it had slipped out of it's holder (probably from being dropped). I replaced the diode in the holder and tried to fire up the assembly again. Still no output. I do not know which way the diode goes in so I tried both directions (there are no markings on the diode) Still no output.

I can only assume that the diode is bad, but I have no idea how to find another. It has no numbers.

If anyone has any specs or advice on obtaining another Gunn diode or the correct orientation, I would appreciate any help I could get.

I was told that one of these assemblies cost around $500 new, and I don't have that kind of "hobbie" money avaliable. So I would like to fix the one I have.

Thanks,

Scott Sidener N0WFL

It seems to me that it was one Burt Fisher that made some rather rude comments on the appearance and weight of the typical ham wife on these newsgroups not so long ago. So it is OK for you to denigrate an entire group of several hundred thousand, which includes a majority that you have never met and who are not involved in these discussions, but limiting the scope of the insults in the reverse direction is going too far?

I'm also puzzled by your challenge to have a verbal slugfest on radio that I saw in another thread. I thought you were selling your equipment and getting out of ham radio, or was that just another statement you couldn't back up?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 AUGUST AND FORECAST FOR 06 AUGUST - 08 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 04 Aug
Daily Proton Fluence >1 MeV: 2.8E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 9.1E+07 (normal)
X-ray background: A7.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Aug 07 Aug 08 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Aug: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly quiet with unsettled
period between 0000 and 0300UT.

Estimated Indices : A K Observed A Index 04 Aug
Learmonth 6 3221 2112
Fredericksburg 8 9
Planetary 8 6

Observed Kp for 04 Aug: 1133 1221

2B. MAGNETIC FORECAST
Date Ap Conditions
06 Aug 5 Quiet to unsettled
07 Aug 5 Quiet to unsettled
08 Aug 5 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
05 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
06 Aug Normal Normal Normal
07 Aug Normal Normal Normal
08 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
05 Aug 1

Observed Australian Regional MUFs:
Sydney: Near predicted monthly values,
with spread F between 0900 and 2100UT.
Darwin, Townsville: Near predicted monthly values.
Hobart: Near predicted monthly values with
spread F and blanketing sporadic E between
1000 and 2000UT.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
06 Aug 10 near predicted monthly values
07 Aug 10 near predicted monthly values
08 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

Could someone point towards info on how to broadcast on FM radio.
I've heard it called free radio or pirate radio. Does that mean it's
illegal (how illegal:)? What makes it illegal (in florida)? Where can I
buy the equipment? What would I need to buy? I just want to transmit 5
to 10 miles and just music (mostly my own and my friends music so as not
to violate copyrights or whatever).

Hi Dana,
But doesn't this contradict other usages of our now favorite word "channel"?
Imagine several waterway channels parallel to each other. If there were
overlap we would now have one broad channel instead of many unique channels.

I believe lexicographers, in writing an abstract definition, depend upon
a `Uniform Usage' principal which demands that the abstract portion of a
definition must be applicable to all usages of the word under definition.

A manufacturer advertising a `40 channel CB transceiver' is really
abusing the definition of "channel."

Michael Deignan should have to do penance for bringing up this topic.

368. Packet data cable

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-05 00:00:00 UTC
From: adamkern <adamkern@tiac.net>
Message-ID: <4u3v6v$sbm@news-old.tiac.net>
Source record: 219506

Hi all!

I just purchased a new Kenwood TM-251A mobile rig. This rig has a dedicated 1200/9600 baud packet connector on it. I have a Kantronics KPC-3 TNC.

I want to use the dedicated packet port on the rig, but I can't find a premade cable that will properly interface my TNC with the rig. (I'm starting with 1200 baud operation.)

Does anybody know if there is any store or individual that sells these cables premade, or has anyone already built it for themselves. If so, can you please give me some tips on how to do it!

I already have the Kenwood PG-5A Data cable with the 6-pin DIN connector on one end for the rig. I also have the parts for the 9-pin serial-style plug that came with the TNC.

Also, if I build it, is it just as simple as connecting the wires, or do I have to change the line voltages?

Thanks in advance!

73,
Adam Kern

>
>It does to me.

If we accept the definition of a "channel" as a portion of RF spectrum
specified by a center frequency and a bandwidth, then there are as many
channels as there are center frequencies. I won't dispute for an
instant that overlapping channels aren't generally useful in the
real world, but I don't see why there has to be confusion about what
a "channel" is in the communication concept. It is a portion of
RF spectrum, and can be located at any frequency.

>: People are
>: still confused by the "40 channels AM, 80 channels SSB" claims made

>: one can choose from. ;-)
>
>A large but finite number of channels multiplied by a finite number of
>modes will still yield a finite product. I still can't get that final
>step from very large to infinite.

My example was not intended to confuse modes, but to point out an
example of standardized "channels" where there is apparently a
great amount of overlap. To make the jump from a finite count of
channels to an infinite count, you need to accept that a "channel"
of a given bandwidth can be located at any frequency - and there
are an infinite number of frequencies. Whether some of these
infinite potential channels overlap with others is irelevant.

URL: http://www.gonix.com/pschleck/elmers/

-----BEGIN PGP SIGNED MESSAGE-----

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has

historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of

electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

As part of the Elmers List's entry into the World-Wide Web, I've also provided a formatted WWW Registration Form. It may be accessed from:

http://www.gonix.com/pschleck/elmers/register.html

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 5 or 6:

1. World-Wide Web (WWW): This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.gonix.com features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also

offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
+ http://www.cs.ruu.nl/cgi-bin/faqwais *

(Note: Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

2. Usenet News: This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news:rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

3. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elm
ers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

4. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

5. Mailing-List: Since the list is cross-posted to rec.radio.info,
the latest copy may be obtained from the mailing-list gateway for
that newsgroup (along with many other informational articles about
radio) when it is published each month. To subscribe, send E-mail
to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In
that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

6. Mail-Server: If you don't want to read through the entire gateway
of rec.radio.info, or want a copy of the list right away, send
E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

371. Re: ARES/NTS/RACES with just an HT?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-05 00:00:00 UTC
From: wb6w@netcom.com
Message-ID: <wb6wDvnJKC.16p@netcom.com>
Source record: 219509

Yes - an HT with a spare (fully charged) battery and sundry appropriate
antennas are all the EQUIPMENT you really need. The rest of what you need
is training on how to provide formal communications, familiarity with
the agencies you will be serving and an attitude to be a communicator,
even if the radio turns out to be an agency or some other non-Ham
but legal radio.

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not yet taken the time to catalog all this information (soon), but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals. Note that I am not in the business of selling the manuals themselves.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Other areas of expertise:

* ARES/RACES
* Novice/Tech Instruction
* RFI
* Volunteer Examiner Programs

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

info@hams.com

[Editor's Note: This project seems to be delayed as the result of schedule slippages with the Debian version of Linux. For more information about the status of the Debian Linux System, please

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

Peter Reynolds KE4ABD

Peter Reynolds (KE4BAD) E-mail: reynolds@stc.nato.int
Voice: +31 70-314-2410 FAX: +31 70-314-2111
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague,
The Netherlands CompuServe: 100276,1340

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation

* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by

either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

John Rymell N3PFF

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

I'm certainly willing to be an Elmer if there's a need. I hope I've
learned a few things since 1966 when I first went on the air. :-)
Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol
* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Flight Test Center, crashing aircraft so you don't have too.
- ---

For hams that are interested and live in my area, they are welcome to login to IBBS. IBBS is a full-time Unix-based computer that is dedicated to ham radio. I carry a full rec.radio.* news feed and E-mail. There will never be a fee for anything.

Over the past 10 years I have operated from 160 M - 23 CM and would be willing to answer any question a new person to the hobby has. If I don't know the answer, well, NASA is only two blocks away. :-) I live and work here at Edwards Air Force Base, CA. I am also very active in SAREX.

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995 ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked summing loop circuit to replace the common mixer-filter LO frequency adder. A technical article describing the project was recently published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

HELP
QUIT

(Spinal Tap)

- ---

Having recently discovered the joys of Perl and CGI on the WWW, I decided to get into the swing of it by coding a WWW page where one can take practice Amateur Radio Exams. The page is now complete and has all five examinations along with figures (including Extra).

The results are displayed question-by-question and then broken down by subelement so that you can see which areas need extra study.

I am also saving the results from each examination taken so that one can get some idea of the relative success rate for each Exam and subelement. This may provide some interesting information as time goes by.

The page can be found at:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

I _think_ it should all work as expected but I welcome any reports of bugs and/or suggestions!

I hope this is of use to people interested in upgrading.

PS: If the page is slow, or not to your liking, try Ham Exam at:

http://w5ac.tamu.edu/ham-exam.html

==========
This message does not constitute any official or unofficial statement or policy of American Turnkey or any other organization, corporation or institution.

I just upgraded to Advanced, and am now working on Extra. Was first licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page,

available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists

exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

Conway Yee N2JWQ

yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

MAINTAINER OF THE UNIVERSAL AND FREE LISTING OF REPEATERS FOR RADIO AMATEURS

This listing with all the data is available for anonymous FTP from:

ftp://mipgsun.mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is
not limited to the US. This reflects the intent to make this directory
universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and
useful.

receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of
! all types. Unfortunately I have not taken the time to catalog all this
! information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00 US/page including US postage. I will quote on larger
! manuals.

This is NOT my career or a business. Any requests must be prepaid or I
will ship COD at additional postage costs.

AMATEUR RADIO: ELMERS RESOURCE DIRECTORY

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, KD3FU

- A -

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.ucsd.edu/hamradio/amprnets

]

Chuck Adams K5FO

adams@sgi.com

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://qrp.cc.nd.edu/QRP-L/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.nacec.org/

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-Mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a

free BBS devoted to HAM/SWL.

+1 508 635-6300 nm1d@aol.com

AUTHOR OF THE FOLLOWING MS-DOS HAM PROGRAMS:

* AutoExam - Examination simulator and study aid
* AutoCW - Morse Code practice program
* DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
* AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Devon Bowen KA2NRC

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more
countries. That is, of course, if I have the data. In order to do this
I need help. I need to get in touch with all people that have access
to databases from countries other than the US. The more up-to-date
these databases are, the better. If you have access to a database and
would be willing to donate a copy to the callsign server for everyone
to use, please contact me. A lot of people would genuinely appreciate
it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

10-X INTERNATIONAL MAILING LIST:

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE tenten-l your_name your_call

where "your_name" is your real name, and "your_call" is your callsign,
if any. For example:

SUBSCRIBE tenten-l John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE tenten-l

(10-X International is an amateur radio organization devoted to encouraging the use of the 10 Meter, or 28 MHz, amateur band. They are primarily known for their "10-X" numbers which members exchange during communications on that band.)

I serve as an Educational Advisor to ARRL and hence fall within the loose bounds of their field organization. I know something of the fundamentals in electronics, having written the current Chapter 6 of the 1995 ARRL Handbook, and something of antennas, with a series appearing in Communications Quarterly. I serve on the Board of Directors of 10-X International and maintain memberships in most of the QRP organizations, as well as the Quarter Century Wireless Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have

experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

MAINTAINER OF ADVANCED COMPUTER CONTROLS (ACC) AND LINK MAILING LISTS

The ACC list has approximately 60 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time.

The way to join the list server is to send me a short E-mail and tell me what equipment you are using.

(Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

EARTH-MOON-EARTH (EME) AND WEAK SIGNAL WORLD-WIDE WEB PAGE:

http://www.webcom.com/af9y/

(I'm not able to do much elmering beyond answering the questions generated by my Web page. You can certainly E-mail me for further information about EME, but with the 30+ E-mail messages received a day, my responses will be limited.)

William (Bill) Coyle N3OGH

wcoyle@iss.dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

Michael Crick

mica@crick.com

Bellevue, WA

http://crick.com/mica/

I design and write software. I have written a top of the line Ham Radio training program for Windows called "Ham University". You can download a free demo copy from my web site.

I also helped write Microsoft Windows. I am not a ham operator but more of a web nut (I was part of the group at BBN that developed the ARPANET back in 1967). However, in designing Ham University, I got a lot of expert advice. I think it will meet many people's training needs.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts
through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers
and the R-5000 receiver, which has built-in logging and memory-
management capabilities. Since its introduction in 1991, Kentrol has
set the standard for Windows-based rig automation, and new features
continue to be added regularly. SkedMan is an automated sked manager
for Kentrol. Enter schedule data, set alarms, and when an alarm goes
off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you
are most welcome to do so.

Eran Glago KD6KVO
~~~~~~

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington

CT 06111. This package is a reprint of an article I wrote for
Communications Technology -- the Journal of the Society of Cable
Television Engineers. We submitted it to "their" journal because we
felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me
here at HQ. I can usually get back to you within a few days to offer
some additional help.

Many amateur radio informational documents (including EMI/RFI files)
are also available from the ARRL info server. Send E-mail to
info@arrl.org with the word "HELP" in the message body.

See Cheyenne Greatorex's entry for information about the ARRL
Anonymous FTP Archive and David Newkirk's entry for information about
the ARRL World-Wide Web Home Page.

* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list,
with the blessings of Paul Prescott, N1AAC, who took over from Our
Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over
the rec.radio.amateur.* Working Group mail list, formerly maintained
by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to
homebrewing tube transmitters and receivers ("Glowbugs," a sort of
intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@ThePorch.com (*)
* rra-wg@ThePorch.com
* glowbugs@ThePorch.com

Use these addresses for messages of general interest to the entire
group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://www.qualcomm.com/people/pkarn/

HIGH-PERFORMANCE SOFTWARE MODEM PROJECT

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://www.qualcomm.com/people/pkarn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

[Editor's Note: I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Paul Keezer NX1P

logview@keez.tiac.net

Finally a WWW page has been set up for HamView products, a Windows based Ham Radio program. This page can now be located at:

http://www.tiac.net/users/pkeezer/hamview/

There is an upgrade file right now for Win95, but the bug has only been corrected in Logview 5.0. Come and check us out.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 kHz for all hands.
40 meters --- 7102.5 kHz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of

radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special
Interest Group (HB-SIG) of the Raleigh Amateur Radio Society
(RARS), on 15 January, 1991 and was revised for another
presentation on 26 January, 1994.

This document contains excerpts of the National Electrical
Code (NFPA 70-1990) that, in the author's opinion, apply to
the installation of amateur radio equipment as would
commonly be found in most amateur radio stations. Direct
excerpts from the Code are contained within inset
quotations. Paraphrased excerpts from the Code are
itemized. The author's interpretation and discussion of the
Code is set full-width. The author's interpretation and
discussion of various sections of the Code is not meant to
be all-encompassing, nor the official interpretation of the
National Fire Protection Association, nor of any official
governing body having legal authority of jurisdiction over
electrical installations, but is meant to be used as a
teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'
both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for
MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-
build/na4g/

AMATEUR RADIO ANONYMOUS FTP ARCHIVE:

ftp://ftp.abs.net/

I attempt to keep the latest and greatest HAM software on-line, and encourage all to upload anything new that they come up with, as it is of benefit to all. Here is a sample of the software that is available for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain
and/or shareware programs, data bfiles, frequency lists, etc., that

would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online

database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State University
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

marchant@netcom.com

I'm one of the SAREX school group technical mentors. A group of about
nine of us are assigned by AMSAT/NASA/ARRL to make sure that the
schools selected for dedicated contacts on a SAREX flight are
prepared. I'd be happy to try handling E-mail from people interested
in SAREX.

CONTESTERS AND DX'ERS WORLD-WIDE WEB PAGE:

http://www.qth.com/ka9fox/

(Featuring recent contest scores, summaries of discussion on most of the contesting and DX-related mailing lists, and more.)

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an e-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

MAINTAINER OF THE INTERNET DX MAILING LIST

with the following line in the message body:

subscribe dx

David Newkirk WJ1Z

webmaster@arrl.org

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

TUSCON AMATEUR PACKET RADIO (TAPR)

I am no longer a TAPR officer, but try to help out with the TAPR file server and am the "official" contact person on the Internet and CompuServe (71540,2364).

To access the TAPR file server, send E-mail to:

file-request@tapr.org

To get the help file and a list of available files, send the following commands in the body of the message:

help
dir
quit

All mail sent to that address is not read by a human. Conversely, mail sent to tapr@tapr.org is read by a human who will be glad to take your orders or process membership applications, but cannot send you file server files.

Joe Nobody N0CALL

nobody@nowhere.nodomain

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

No longer available from:

* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* http://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Well, it's finally happened. The long-defunct FAQ's have finally been removed from most archive sites. This important document, one which served as an excellent "Read Me First" for the readership of the amateur radio-related Usenet newsgroups, is now no longer publicly available.

Efforts are still underway to bring it back, but so far, no volunteers have stepped forward that have been able to resume its regular posting and maintenance.

As stated many times before, new editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby, so the editorial review group is intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward

off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

378. Yaesu Ft747GX problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-05 00:00:00 UTC
From: dslosty@usa.pipeline.com
Message-ID: <4u4a5v$37v@news1.t1.usa.pipeline.com>
Source record: 219516

Hi,

I've got a Yaesu FT747GX HF transceiver with
an intermittent/erratic problem. Periodically, while
transmitting, the RF meter pegs at maximum but the output
of the transmitter on a RF wattmeter drops to near zero.
It seems like the transmitter is putting out wideband garbage.
I removed the excitation/drive from the final RF amp assembly
and the symptoms continued. It seems like the RF amp is
taking off due to a parasitic oscillation.

Symptoms first showed up on the 20 meter band but by
moving several bypass and coupling caps near the toroidal
output transformer, the symptoms now more often appear
on the 30 meter band. I may have changed the parasitic's
frequency or changed stray coupling.The related mica capacitors
seem ok when tested but that doesn't mean that they are not
breaking down during high RF voltages. Outside of shotgunning
it and simply replacing most components in the final RF asembly
(time consuming and costly), does anyone have any ideas??

Thanks,
Doug

Hello Greg,

Wellcome to DL. I have a list of all paket and voice repeaters in DL and
will mail it to you directly (tomorrow, as I do not have the file here in qrl).
About clubs: there surely is a local group of the german amateur radio club
DARC. As far as I know, they do not have a web page, but I'll send you
their telephone number.

vy 73,

Wolfgang DJ3TZ

And Burt Fisher, again and again:
> Read "Hitlers Willing Executioners", a best seller in this country.
> You will read that ordinary Germans made the holocaust possible.
> You will read that even after Himmler ordered the killing of Jews to stop
> ORDINARY Germans, like you, kept killing and torturing.

Moritz,
I am saddened and disgusted by Burt's and some others' irresponsible
posts, and one could just call them stupid bullshit and ignore them,
but...
it is not *ordinary* Germans or Americans or any others who were and are
responsible for the horrible atrocities done to innocent people all over
the world - it is people like Burt and his kind who prepare the ground to
make such thinks happen again: Flames -> hatred -> resentments ->
nationalism -> racism -> genocide, this is the chain-reaction caused by
all these "innocent" remarks, and a dangerous combination of ignorance,
arrogance, and utter narrow-mindedness. Burt and his kin combine a horizon
of zero degrees with (to quote him) "believing 100%" what they say.
It is very simple: possibly without even being aware of it they have blood
on their hand whenever they shout : beware of butchers!
I hope somebody will tell Burt and his friends what amount of damage they
do with such provocations and invite them to either shut up or go
somewhere else where they are more welcome.

Uh, you had better re-think this one old boy, werent you the one saying that if your German it's in your genes to kill? Doesn't seem to me that that grandchildren of the soldiers who commited terrible crimes during WW2 had much control over what their grandfathers did, yet you make horrible generizations about people who where "not in any way involved". Is your wife somehow immune to this treatment?

To ZL stations

A friend of mine, F6GOX (ex TK5BL and FJ5BL), is going to New Zealand for holidays in October.

He's looking for amateur radio stations owning "B & B" overthere.

If so, please answer to me directly. I'll pass him your answer.

* = New data. T index may have changed.
^ = IPS predicted T index

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

2. FLARES AND SHORT-WAVE FADEOUTS
DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
09 Jul 1 1 0144-0210UT
0905-0915UT
10 Jul 1 0341-0410UT

2.1 Comments on Solar Activity.
Solar activity was generally low during July, with the solar disk being without spots for a considerable interval (14-27 July as observed by the IPS Cuslgoora Solar Observatory). The most remarkable feature of the month was the large (X2.6) flare which occurred on 9 July. This is the first X-class event since November 1992.

The ten centimetre solar flux dropped to very low levels during the month (64.9 on 18 July) due to the low level of solar activity and also the geometry of the earth's orbit around the sun.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)

DATE COMMENTS
No significant disturbances observed.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
25-27 Jul: Daylight depressions of 10-30% across northern Australia.
31 Jul: Daylight depressions of 10-30% across northern Australia.

Night-time Spread F was observed at most stations 9 - 19 July.
Occasional Sporadic E was also observed during this period.

Source record: 219527

There is a web site called Southwest Florida Online that provides good info for hams in the area as well as visiting hams. Callbooks, listings of all hams in the tri-county area, repeater info, information, maps, and points of interest about the southwest Florida counties of Hendry, Glades, and east Lee county. Included are the towns of LaBelle, Clewiston, Lehigh Acres, Moore Haven, Palmdale, Alva and Felda.

All of these areas are also known for their great outdoor recreation and freshwater fishing on Lake Okeechobee and the Caloosahatchee River and the area's smaller lakes. The web address is:

> What kind of wattage would an HT of this type have??

The GMRS service has been around for some time now. The frequencies used are in the 467MHz range and power is limited to 50 watts. You can apply for a license that your immediate family may use the radios. There are both simplex and repeater pairs available. When I was still in the two-way business I had two GMRS repeaters in operation in the Atlanta area. Reliable coverage was in excess of a 40-mile radius from the repeater location. GMRS formerly allowed business use of the frequencies but this has been discontinued. However there are still some businesses that were grandfathered in.

Good service to use for family communications. No phone patches allowed however.

Hope this helps some.

Steve Bramham

Yep, I used to have a Diamond 2m/440 antenna on my truck. Couldn't figure out why the 440 repeaters were all getting so weak all at once...duh! The loading coil at the base of the antenna was slowly sucking up water... Must have been 20 or 30 dB of attenuation on 440 by the time I figured it out. No more Diamond junk for this ham.

Read the book, Hitler's Willing Executioners" The evidence is
all there and well documented. In fact documented back hundreds of
years.

Not all Germans are killers. There are those that disapproved of Hitler.

!!!!!BZZZZT!!!!! !!!!!TILT!!!!! !!!!!FLASH!!!!!

I think you have just moved the ground which you staked out to
defend, and you moved it a very long way. May I remind you where
this started (well, started for me at any rate):

In article <4tu85g$hdh@abyss.West.Sun.COM>
myers@West.Sun.COM "Dana Myers" writes:

> In article <4tpbcb$b8j@anomaly.ideamation.com>,
> Michael P. Deignan <kd1hz@anomaly.ideamation.com> wrote:

> >Really? I transmit on 7030Khz. You transmit on 7031Khz. How many channels
> >are between those two frequencies?
>
> In theory, there are an infinite number of channels between those
> frequencies.

Your original position was that there was an infinte number of
channels between any two frequencies. You are now defending the
position that there is an infinite number of variants in center
frequency for whatever number of channels that can co-exist.

Please proceed to defend this in peace, because there is no one
hereabouts arguing against your newer proposition.

You write well but it indeed was the ordinary German that followed
Hitler. When the ordinary German opposed the demise of the churches
the Nazis relented. But the ordinary German went along with the
killing of the Jews. Read the God damn book or at least skim it.

> It is very simple: possibly without even being aware of it they have blood

Message-ID: <4u3ngj$ic@dfw-ixnews8.ix.netcom.com>
Source record: 219599
Cross-posted to: rec.radio.amateur.digital,rec.radio.amateur.homebrew,rec.radio.amateur.misc

I splurged at the Jacksonville Hamfest this weekend, and picked up a video digitizer, MFJ's "Picture Perfect" Model MFJ-1292. I installed the board and software (v3.2) and fired it up. Now comes the problem: The program seems to be working properly, and seems to be responding to the camcorder. At least it knows when the camcorder is "on" or "off". Unfortunately, when I try to capture the video, nothing happens. The program says it is capturing video, but nothing ever gets into RAM. I have checked the specs, and the camcorder output signal is just what the MFJ board is (supposedly) looking for. Suggestions or comments would be appreciated - please E-Mail to rekoss@ix.netcom.com, or to kossr@edl1.ksc.nasa.gov. Thanks !

Correction The event will not be this weekend, but the weekend of the 31st of August!

The Xerox Amateur Radio (XAR) club WD6CZH will be running the "Ton O' Radios" special event station this weekend. Our goal is to work over 2,000 pounds of radios. The exchange is your callsign and the weight of the transmitter and receiver (or transceiver) used to make the contact.

Time: 1600-2400 UTC
Date: 31-Aug-96
Freq: General portions of the 40M, 20M, and 15M bands
Novice portion of 10M band
WD6CZH repeater (near LAX) 449.325- 114.8PL

For a certificate, send a 9x12 inch SASE to XAR, 6940 Bacarro St., Long Beach, CA 90815-4805

Some of the early Comets and Diamonds sold in this country were
cut for the Japanese bands, IE 144-146 MHz and 430-440 MHz. When
used in our FM subbands, there was a problem. Besides the SWR
being a bit high in our repeater subbands, the phasing lengths
were wrong for the element stacks. That gave an undesirable upward
tilt to the main lobe, especially in our 70 cm repeater subband.

That problem has been solved for antennas imported more recently.
In fact, Comet has a 440 MHz repeater antenna offering 0.5 degree
electrical downtilt (in the 448 MHz region, which can be ideal for
a very high site repeater like mine). There is an obvious compromise
involved with the dual band antennas, and a phasing setup that gives
a good main lobe angle for one band isn't going to be ideal for the
other. I don't recomend using dual band antennas on repeaters for
this reason.

I haven't found significant azimuth pattern nulls with either of
these brands of antennas, if they are mounted correctly. Of course
if you side mount them, you will have pattern distortion due to
the mounting structure, but that's true with any antenna. (You
really need an antenna custom designed for the particular site
if you want a uniform pattern from a side mounted antenna. Usually,
though, you'll take advantage of the pattern distortion to favor
an area where terrain makes coverage difficult.)

Both makers exaggerate antenna gain figures. I think both
add about 3 db to the actual gain over a vertical dipole.
This is, unfortunately, typical of the amateur radio antenna
industry. They're better than Cushcraft though (and the
Ringo and Ringo Ranger *do* have distorted azimuth patterns).

The real differences between these two makes are mechanical
and environmental. The Comet antennas are typically less
rigid, but they tolerate wind whip much better than the
Diamonds. The Diamonds tend to suck up moisture (they use
open cell foam spacers and no weep holes). This can kill
the performance of a UHF antenna. They also use plain

plated steel hardware internally. These two factors mean
you'll quickly have intermittents due to corrosion. They
also use series capacitors for phasing, and the first good
lightning hit will pop the capacitors and it is time for a
new antenna.

Comet does things differently. They use "linear loading"
to phase the sections. This means that they don't need
foam spacers to keep the element centered (the phasing
loops do that), and it also means that they are DC grounded
throughout, so lightning has to actually melt an element
to damage it. They don't have weep holes either, however,
and it is a good idea to drill some before mounting the
antenna.

Commercial grade repeater antennas are better, of course,
but if you need a moderate gain antenna for a UHF repeater
and you can only do single point mounting, the Comet 440
repeater/base antenna suffices nicely, and for a *lot* less
money than a first class commercial grade antenna. I wouldn't
even consider a Diamond antenna anywhere where the humidity
ever gets above 40%, or where lightning may be a problem.

If you have heavy icing conditions, then just dig deep in your
pocket and buy a Cellwave from the very beginning, you're
going to have to do it sooner or later. (Get it cut, tuned,
and phased for your repeater's *receive* frequency. You
can make up for any tilt in transmit by upping the power
a bit, but you can't help receive if the main lobe is looking
at the birdies flying by, or the earthworms crawling below it.)

Trying to use a surplus commercial antenna cut and phased somewhere
in the 460-470 MHz land mobile band for an amateur repeater is going
to result in a pattern with lots more tilt than you can stand. Don't
waste your money or time with this approach. (Yeah, I know, people do
it all the time, but I'll bet they've never measured the tilt of the
main lobe, and don't know how much of the antenna's gain they are
wasting in a useless direction.)

Gary

Before people go ballistic over this, let's get the facts. Can someone find out what these rules actually say about amateur stations, if anything? What does "MAY" have to perform an RF environmental assesment mean? Does this apply to sporadic transmissions like ham stations, or only constant emissions like broadcast, cellular, relay towers, etc. Are frequencies taken into account in any way (certain parts of the VHF, UHF, and microwave spectrum have much greater potential for biological impact than HF or other frequencies. Is there a certain distance from an antenna to the nearest house, etc. that would exempt most of us? Also, don't all proposed new rules have to go through a comment process?

There already are "environmental impact" rules about antenna structures, and 99.9% of hams just check a "No" box on Form 610 and get on with their lives.

I'm sure the ARRL, not to mention many commercial organizations, would raise quite a squawk if every user of a 50+ watt transmitter in the U.S. had to file Love Canal-style paperwork. This would involve every police and fire department in the country, for starters.

07 Aug Normal Normal Normal
08 Aug Normal Normal Normal
09 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
06 Aug 5

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values, with blanketing
sporadic E between 0400 and 1300UT and spread F
between 1400 and 2100UT.
Hobart: Near predicted monthly values with
night-time spread F.
Townsville, Sydney: Near predicted monthly values.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
07 Aug 10 near predicted monthly values
08 Aug 10 near predicted monthly values
09 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.

Yeah it is typical Burt. He insults a group of people at a time rather
than individually. A bit like turning around at a wedding to thank
everybody who gave gifts, rather than thanking the individuals.

An EA filing would be required if a station is out of compliance with
the new exposure rules and wishes permission to operate anyway. Without
a complex, costly, and time consuming EA (and favorable FCC action,
frankly unlikely), an amateur station *must* be brought into compliance
with the new rules by Jan 1 1997.

This is likely to affect a considerable number of amateurs. I'd
suggest most amateurs running more than 50 watts who use an indoor
antenna are out of compliance. And those using low outdoor antennas
may have to install fences with access interlocks before being able
to crank the power back up over 50 watts.

OTOH, if your antenna is more than 10 meters above any horizontal
surface where a person might stand, and you're running no more
than 1,000 watts ERP (that's your output power minus feedline
loss and plus antenna gain), you're probably Ok. You'll need to

evaluate each situation, however, to be sure you are in compliance, this is only a very crude rule of thumb, and not sufficient to assure compliance (your MPE might still be too high in the above scenario depending on antenna type and orientation). The chart in Appendix B of the report and order gives the allowable limits for controlled and uncontolled exposures at various frequencies (exposure limits are different for different frequency ranges).

The controlled exposure numbers are the limits for *your* exposure. The uncontrolled exposure numbers (much lower) are the exposure limits for any member of the general public due to your transmissions. This latter number is likely to cause problems for those operating in apartments or condos. (The numbers are approximately 30 times lower than the previous ANSI limits the FCC has used in the past for licensees not exempted, IE broadcasters. Amateurs *were* exempted, but no more if they run 50 watts or more.)

If we follow the good amateur practices of mounting our antennas as high and in the clear as possible while running the minimum power necessary for communications, many of us will be Ok. The problems are going to arise for those using indoor antennas, low outdoor antennas in access uncontrolled areas, and for those with close neighbors or public throughfares. HF mobile operators are going to have to be particularly careful. Operating in a parking lot, or in heavy traffic, could easily put you out of compliance unless you drop your power to below 50 watts. There aren't many VHF+ mobile operators running more than 50 watts, so most of them will be exempt. Those who are running 50 watts or more, however, are going to have to take steps to limit exposures.

People running glass mount antennas are almost certainly out of compliance with even the controlled exposure limits, but remain exempted if they're running less than 50 watts. That's not a good reason to still be suffering excess exposures, however, and prudence would suggest getting rid of that glass mount and drilling that hole in the roof like I've been urging you to do for years.

Repeater owners may be in particular trouble if their site isn't controlled access (and even if it is if the *combined* exposure from all sources on the site exceed the controlled exposure limit). In the latter case, *everyone* will have to shut down any time maintenance at the site is to be performed (or suitable protective clothing will have to be worn by the maintenance personnel entering the area). This is a *biggie* folks, and may limit amateur access to many places where we've traditionally sited repeaters. The site owner is going to be held primarily responsible for seeing the exposure limits aren't exceeded, and they're going to turn a fish eye on amateurs trying to cadge a free site. (Get your "moon" suits now, it may be the only way you'll be allowed onto many sites.)

Note, we don't have to file an EA unless our station is out of
compliance and we want to operate it anyway. But we *do* need
to do the measurements or calculations showing that our station
is in compliance with the exposure limits if we run more than
50 watts. This information must be kept with our station records,
and be available for FCC inspection at any time.

Some of the limits are going to be hard to measure. For MPE, above
30 MHz there aren't any trustworthy instruments available. The
FCC is going to allow us to measure the Volt/meter field and
calculate the MPE from that. For well characterized antennas,
the FCC will also let us depend on computer simulation calculations.
For SAR limits, that's the only prudent way.

Hardware gurus need to be designing suitable instrumentation for
us to make sure we're in compliance (and suitable field calibration
techniques to assure us the instruments are trustworthy). Software
gurus need to give us computer programs to model exposures. Both
of these are going to be tough tasks if they're to work in the
real world where our stations operate, and not in some idealized
free space.

Remember, we have to have documentation on file with our station
records showing that we are in compliance before we can run 50
watts or more. 49.99 watts may wind up being the new defacto
amateur power limit if we can't come up with reliable hardware
and software to document that we're in compliance with the new
exposure limits.

This thread is full of references to key presses in the manual. My manual has
a heading about extending the transmit range with no instructions afterword.
It is followed by a table showing factory settings and a warning box about
performing the MARS/CAP modification. No magic key presses, though.
There's only a short explanation on how to reset the radio by holding down
the F and T-SQL buttons while turing on the radio. Does anyone know the secret
key sequence? I'm actually more interested in storing out-of-band frequencies
in memory rather than the transmit mod.. The only hope I see is if there is a
software work-around through key sequences or something. Seems silly to me why
such a limitation exists if the hardware is already designed for wide receive.

To my thinking the real, immediate problem is that IF the amatuer station has to file an EIS, that gives every neighbor and enviro-busybody an invitation to object, delay and appeal the "construction" of the station. Out here on The Left Coast, that practically guarantees a group of hystericals and allies from The Birkenstock Brigade adding their 2 cents worth to every station they decide is a "risk". Remember how ham radio got pilloried by KING-TV, Channel 5 when the neighbors set on sacrosanct magnolia Hill had problems. I can't wait for that old rag Jean Ennerson to find this issue to crusade on.

Fleaspeak - the vernacular of hamfest fleamarkets.

Fleaspeak English Translation

This rig puts out a BIG signal It's 50 kHz wide
This is a really good CW rig. It doesn't work on SSB.
This is a really good SSB rig. It doesn't work on CW.
This is a really good rig. It doesn't work on CW or SSB.
The transmitter is outstanding. It doesn't receive.
The receiver is really hot. It doesn't transmit.
This rig is really hot. It's stolen.
It seems to be a vintage regenerative type. It oscillates.
I just retubed it. Got 'em from questionable used tube stock.
I just aligned it. The slugs on the transformers are jammed
I don't know if it works. it doesn't work, probably never has.
It doesn't chirp. it doesn't chirp because it doesn't transmit.
The audio sounds great. The 120Hz buzz is faithfully reproduced.
I just had it serviced. I sprayed WD-40 over all the wiring.
It comes with the original box. Just brush out the kitty litter.
Better buy it now, cause it won't last. no transation needed.
Sure, it works at full power. It sucks all it can from the wall.
This rig has wide frequency coverage.
It drifts up and down and out of band.

Frequency stability is great.
The VFO doesn't work - you'll have to use crystals.

Real popular rig in its day.
There were whole HF nets on the repair and maintenance problems.

QST gave this one a really great review.
The language broke new ground for profanity.

It might need a bit of tweaking.
Marconi himself couldn't fix it, much less align it.

It was used in government service.
It was stored outdoors on a wooden pallet.

The dial drive may need lubricating.
the gears are stripped and the setscrews frozen.

I plugged it in to check that it lights up.
The light came from the two foot high flames.

I'm selling it because I have two of them.
I'm getting rid of my parts radio.

You won't find one at a better price.
Better from the point of view of the seller.

This is a collector's item.
the manufacturer just went belly up and won't honor the warranty.

It came from an estate sale.
If you have any problem take it up with the owner.

I had it on the air just last night.
And you thought the woodpecker was gone.

It worked last time I used it.
if it still worked I'd still be using it.

The only lightning damage was a fuse.
The only lightning damage I recognized was a fuse.

I have the [...] somewhere. I'll send it to you.
you'll never see the [...].
I'll help you carry it to the car.
I'll do anything to unload this boat anchor.

It works ok on 80 meters.
It had some parasitics
but I got in and really screwed it up and now I want to unload it.

The tubes used by this rig are worth the asking price.
The rig uses a rare 7360 beam deflection tube for a balanced
modulator, but it's blown and you'll spend \$80 to get a new one.

This is the rig of my dreams. I really wanted one of these as a
kid, but now <snif> I've got to let it go.
As I've gotten older, I've learned what a hunka junk it is.

The signal quality of this rig was easily recognizable in its day.
The high distortion and bad audio quickly identified this rig.

This rig will bring back the feelings and atmosphere of vintage
ham gear.
The bypass capacitors to the
AC line put enough voltage on the chassis to give you a shock
in the lips through the microphone, and it smokes so bad when
you turn it on that you'll probably start coughing and wheezing.

I'd keep this baby, but my wife is making me clean everything
out.
I finally got around to giving this thing the proverbial heaveho.

There are a couple of other people interested in it.
someone sat on it to tie his shoelaces while walking past the table.

You'd better buy it now, because I'm leaving soon.
The previous buyer and his brother,
Guido, are heading back toward the table and they aren't smiling.

Joe NA3T, FM05

Contact your Internet Service Provider (ISP) and ask them. They may in
turn tell you to call your software vendor, assuming that you have
actually registered your browser software. Either way, those problems
have absolutely nothing to do with this newsgroup itself.

There are two errors in Clint's reply above:
First, Paging is NOT APPROVED on either 27 MHz CB or 462/467 MHz GMRS frequencies. Second, CTCSS is quite legal on both CB and GMRS.

Now, why not use the new FAMILY RADIO SERVICE? These units are low power UHF simplex, operating BETWEEN the present high power GMRS channels. Radios from several manufacturers should be arriving in stores in a few more weeks.

Oh knowledge of the affair isn't really required! Product liability, for example
transcends all reasonable sane limits for time elapsed on that, with or without

knowledge.

I am familiar with one lawsuit now going on where the product involved was built in 1978. The claim is the gate design on a cattle trailer was defective and the user had the gate come open last year and the cows fell out and caused a massive traffic accident.

Allegations seem to be that because the design was copied from another product back in 1963, it is really not the copiant that may have the final liability, but the party from which the design was COPIED!

For millions of dollars in claimed damages.....

:)

You can get it at www.fcc.gov where it is in the technical bureau section.
It took me a while to find it, but there is a "NEW" notice flaggin it right
at the top of the department's page.

It comes in two flavors, an acrobatic clown version and perfectly worded
verison which you will likely have to convert from Word Perfect 5.1 to
read.

I think the WP 5.1 version came in at above 1 Megabyte in size!

When in the Lord's name not taken in vain, will anyone EVER listen to

This could get real interesting. Since the article says the station location
and all occupants are in a controlled enviroment. They consider neighbors and
such to be uncontrolled. I wonder what will happen if a neoghbor comes down
with some mysterious illness like cancer and notices he has been bombarded with
electromagnetic radiation from your station all these years could he hold the
operator liable because he had knowledge of the EPA guidelines of RF radiation
?. Also I wonder what the FCC intends to do with all the land mobile equipment
as most all is 100 watts. The article implies a mobile station operating over
50 watts could also not be in compliance with the guidelines..

twasn't them..the republicants run the FCC and make the rules. BTW the new Dole plan calls fror substantial fee's
for ALL radio spectrum users as part of his plan for his VOODOO economic policy to pay for this
cockamamee tax cut (cuts with no corresponding spending cuts dolooar for dollar)

... I imagine that we as a group are affected as well. Burt's probably in hog heaven
on this one. Those darn republicants. Boy, ya gotta love them.

Just one more of the tax and tax government people.
Ya know how to reduce big government??? fire em ALL and start fresh

I concur. However, when I was in Anaheim a month ago, I must confess that
I enjoyed one bit of entertainment on that unbelievable machine: some of
the regulars had a $500-bet going as to whether another one of the
regulars would receive a notice of violation of Part 97 from the FCC by a
certain date. Dunno who won or lost as I left before the time period
specified in the bet expired!

>it don't you, folks?

I do! Imagine if everyone voluntarily kept their output power limited to under 50W. Remember, we're supposed to run the minimal power necessary for reliable communication. Since folks don't self-police themselves in following this regulation, we'll now have the government carry out those duties. But we can thank the FCC for *raising* the cutoff to 50W; the original proposal was for a lower power level.

As long at that is 50W output and not 50W ERP, just think of the more efficient antennas that are going to be sprouting from each shack now.

GMRS="General Mobile Radio Service" It was a set of frequencies in the UHF band set aside by the FCC to allow MOM&POP to use two way radios for personal use...not business. There are limitations on power for mobiles and control stations. The repeater owner may only charge users what it costs to maintain the repeater...no profit. Mobiles are limited to 7 watts and I believe 2 watts on bases..not too sure on the last part though.

I believe the freqs are 462.500-462.700mhz in 25khz jumps.

Interesting point. You may be right. Still, it irritates me that FCC has
any questions on RF emissions and safety other than the usual "why
should you not hang onto an antenna when someone's transmitting a gallon
on it?". While at microsave frequencies and above (and, perhaps, at high
UHF), disastrous things can happen when humans get in the way of
high-powered RF fields, I am not at all certain (learned ptomes on this
newsgroup to the contrary notwithstanding) that RF emissions pose a
serious hazard at VHF and below. Certainly the Novice question-pool
question as to why one should keep the rubber duck antenna of a HT away
from one's head when transmitting seems to me not to be proper exam
material in that IMHO the jury is still out on RF problems at VHF and
below.

I know, at least, that I've used HTs with rubber ducks for over twenty
years and haven't noticed a thing other than the financial drain of buying
battery packs!

Well if the FCC did do anything to remove the repeter or remove the people from
that repeater then you would have those knuckle-heads just go to another
repeater. so i think it's good that nothing is being done about it...

I just want to know how to check if I comply or not. I downloaded the
PDF from the FCC, and the measurements listed there are WAY above me.
Is there a chart available for this?
I'm not too concerned because I only exceed 50W on 10M (100W), but
would still be interesting to know.

Howdy,

This is a follow up to my previous Internet posting sometime ago, regarding Tucker Electronics (Garland, TX) radio repair center.

I recently had the opportunity to deal with Tucker Electronics again, and I was pleasantly impressed with their commitment to customer satisfaction, and strive for good service.

My main issue was radio repair service, and Tucker now have a well established radio repair center. The data that I collected on their radio repairs history indicate that they have repaired more than 600 amateur radios with less than 10 reported problems. Also, they are an authorized Kenwood and Icom service center.

I decided to post this, because I believe in giving the credit to the people that deserve it. Tucker electronics met their pledge for customer satisfaction in my case, and I want to share this experience with all my fellow amateurs out there.

>?.

You bet. The lawyers will love this. But you can be sure that the
manufacturer of the radio will be sued too. Remember the deep
pockets rule. General aviation was nearly ruined because the deep
pockets rule meant that the aircraft manufacturer was always sued
when some pilot did a stupid thing and hurt someone. The legal
theory was that the manufacturer should have built the plane so
that the pilot's stupidity couldn't cause an accident. Same logic
applies here.

>Also I wonder what the FCC intends to do with all the land mobile equipment
>as most all is 100 watts. The article implies a mobile station operating over
>50 watts could also not be in compliance with the guidelines..

Worse than that, Gary, the 50 watt exemption only applies to *amateurs*.
It does not apply to other classes of licensees. They've got to certify
compliance at *any* power level. Note that "push to talk" *radios* are
exempted from certification by their *manufacturers*, but *stations* using
such radios are not. The *licensee* is still responsible for seeing that
his station operates in compliance with 47 CFR 1.1307, 1.1311, and 1.1312.

However, Part 90 *portable* radio stations are categorically exempted.
I'm not sure the FCC considers "mobile" rigs to be "portable" radio
stations. If not, *each* installation must be certified. Otherwise,
they're exempt *regardless* of power level. Cops always seem to be
"more equal" under the law than you or me.

I don't recall that, but Analog Magazine (the John Campbell edited hard science fiction magazine) had a story during the war that so accurately described an atomic bomb that the FBI had extensive discussions with Campbell and the author after it hit the stands. They became convinced that neither had ever heard of the Manhattan Project and that the design came from the bright imagination of the author, who had considerable scientific training and saw the device as obvious. In fact, the design of atomic bombs *is* obvious, except for the conventional explosive lenses that make it work. That was the *real* "atomic secret".

Mention of magnetrons in QST during the war would probably have drawn the FBI's interest for another reason. Radar. The magnetron was a secret (captured from the Japanese).

If you feel this way, perhaps it's time to move on to better bands and
take your "business communications" to where the FCC hasn't stopped
issuing licenses to businesses, yet.

>in the new FRS - plus the fact that for the first time in history, the
>FCC is forcing licensed, business operators to SHARE a band with
>unlicensed, CB-mentality folks. With absolutely NO recourse for
>intentional interference.

You know what I share GMRS with here in Phoenix? UNLICENSED
businesses. Tow-truck and hauling companies using callsigns that
expired in 1992, lame block-watch groups holding comical conversations
on 462.675, and a FEW families.

What I keep seeing, is people complaining about this new band plan,
and that it will cause "intentional interference". BS! As long as
they are using the type accepted equipment, we shouldn't have a
problem right? If they are not, then they are already in violation,
thus negating the need to add that language to the docket. Hell, the
deviation for the new rigs is half what it is today on GMRS and do we
have an interference problem now? NO.
I can sit and listen to the interstitials all day and not hear a soul.
At least now, I can forsee some activity, increasing the chances for
someone to get help for either directions or emergency assistance.

Almost everyone uses CTCSS tones, or PL tones. Even if you were to hop
on 462.675 right now, what are your chances of having the right tone
for someone to hear you? Pretty darn slim. I think this increases ones
chances, over time.

Instead of welcoming several new FM freqs on 467, everyone is rushing
to label it as a mistake and a failure. If anything, we should be glad
it's there if we need it.

What prices need to be corrected?

C O M P L E T E S T A T I O N

I am selling my entire station as one package. See it, test it, buy it.

Icom 751 with CW filters, RC-10 keypad $800

Icom 2KL Solid state 5OO watt amplifier $1300

Icom AT-500 automatic tuner $350

Cushcraft A3 Beam $300

Alliance Ham rotor $100

40 foot crank up tower $300

$3000 cash and I do mean cash. It all works and it is all connected.

I am bored with the hobby. The prices noted above are how I arrived at
the total, if you strongly disagree, tell me.

All messages answered. If you do not get an answer I did not either get
the message or you didn't.

Message-ID: <3207D2FB.316E@ccsnet.com>
Source record: 219449
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.misc

This is a bulletin on behalf of the Societe Ancient Telegraphers Intentional Reducio Extremis (SATIRE), one of the world's smallest and slowest growing amateur radio operating awards organization. The group hereby annouces a brand new certificate : the WORKS ONLY DX (WODX) AWARD. (hates Americans).

This is an on-your-honor award; no QSLs are required. If you qualify in your own mind , you get the award without needing to submit proof. This is a NO FEE award. To receive your certificate, simply copy the certificate below to file, then edit the file to include your callsign, check any special endorsements, and then print out and post it in your shack.

Certificate:

"SOCIETE ANCIENT TELEGRAPHERS INTENTIONAL REDUCIO EXTREMIS"

-- WORKS ONLY DX AWARD --

In recognition of an extraordinary operating accomplishment, amateur radio operator _____ is hereby awarded the prestigeous Works Only DX Award, based upon the fact that said operator limits his contacts to DX STATIONS ONLY, and has not, within the past 6 months, had any on-the-air conversation (either by CW, phone or other operating mode) with any other operator residing in his own country.

In addition to denying himself the pleasure of chatting with his fellow countrymen (in dedication to his single-minded pursuit of rare DX contacts), said operator has achieved further distinctions. The following special endorsements to this certificate also apply:

( ) Works only stations from countries from which he has not already received a QSL card.

( ) Devotes at least 6 hours each day to monitoring packet cluster spots

( ) Exchanges only minimal information, to avoid unnecessarily prolonging contacts and learning what real people are like.

( ) Abruptly terminates any domestic contact which may have been erronously made during the heated pursuit of DX for fear of actually getting too personal.

SB QST @ ARL $ARLB050
ARLB050 New RF standards Part 1

ZCZC AG30
QST de W1AW
ARRL Bulletin 50 ARLB050
From ARRL Headquarters
Newington CT August 6, 1996
To all radio amateurs

SB QST ARL ARLB050
ARLB050 New RF standards Part 1

New FCC RF safety standards effective January 1, 1997, could affect the way some hams operate, perhaps especially those using vehicle-mounted antennas. As a result of a Report and Order adopted by the FCC on August 1 (ET Docket No. 93-62, Guidelines for Evaluating the Environmental Effects of Radiofrequency Radiation), Part 97 will require hams running more than 50 W PEP to conduct routine RF radiation evaluations to determine if RF fields are sufficient to cause human exposure to RF radiation levels in excess of those specified. ''Measurements made during a Commission/EPA study of several typical amateur stations in 1990 indicated that there may be some situations where excessive exposures could occur,'' the FCC said in ending the blanket exemption for Amateur Radio. Amateur operation at power levels of 50 W PEP or less is ''categorically excluded'' from the exposure requirement in most cases. Where routine evaluation indicates that the RF radiation could be in excess of the limits, ''the licensee must take action to prevent such an occurrence,'' the Report and Order stated. The FCC said this could mean altering operating patterns, relocating the antenna, revising the station's technical parameters--such as frequency, power or emission type--or ''combinations of these and other remedies.''

''Exactly what is involved in conducting a 'routine RF radiation evaluation' is not yet clear,'' observed ARRL Executive Secretary David Sumner, K1ZZ, adding that the FCC has promised to release a revised OST/OET Bulletin Number 65, ''Evaluation Compliance with FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation.'' The League is now studying the 100-plus page docket, to see if the League should seek reconsideration of any aspects of the FCC decision. Sumner noted that the FCC expects it will not be difficult for most amateur stations to show that the specified

limits will be met.

In the Report and Order, the Commission adopted Maximum Permissible Exposure (MPE) limits for electric and magnetic field strength and power density for transmitters operating at frequencies from 300 kHz to 100 GHz. These MPE limits are generally based on recommendations of the National Council on Radiation Protection and Measurement (NCRP) and, in many respects, are also generally based on the guidelines issued by the Institute of Electrical and Electronics Engineers Inc (IEEE) and subsequently adopted by the American National Standards Institute (ANSI) as an ANSI standard (ANSI/IEEE C95.1-1992). The Commission used the 1992 ANSI/IEEE standards instead of the 1982 ANSI standards that had formed the basis for the existing rules under which Amateur Radio stations were categorically exempted.

Sumner said that for high-power mobile operation and for operation with indoor antennas, particularly in apartment buildings and other situations where there is ''uncontrolled exposure'' to neighbors and the general public, ''amateurs may well have to make changes in how they operate.'' He said the ARRL Lab staff and the RF Safety Committee will be evaluating the new requirements.

(continued in Part 2)

SB QST @ ARL $ARLB051
ARLB051 New RF standards Part 2

ZCZC AG31
QST de W1AW
ARRL Bulletin 51 ARLB051
From ARRL Headquarters
Newington CT August 6, 1996
To all radio amateurs

SB QST ARL ARLB051
ARLB051 New RF standards Part 2

(continued from part 1)

The new regulations also will require the addition of five questions on RF environmental safety to the amateur examinations for Novice, Technician, and General-class elements 2, 3(A) and 4(B). Sumner noted that the Commission's Report and Order does not take into account the practical problems associated with such a significant revision to the volunteer-administered amateur examinations, and that more time than the Commission has allowed will be required to do a good job.

The Commission acknowledged the updated guidelines generally are more stringent than the current rules but said that the new rules will protect the public and workers from strong RF emissions. Adoption of new rules by August 6 was required by the Telecommunications Act of 1996.

The FCC encourages the amateur community ''to develop and disseminate information in the form of tables, charts and computer analytical tools that relate such variables as operating patterns, emission types, frequencies, power and distance from antennas.'' The Commission said it intends to provide ''straightforward methods for amateur operators to determine potential exposure levels'' by year's end.

In comments filed earlier with the FCC, the ARRL strongly opposed adoption of the new requirements. The ARRL said most Amateur Radio users do not possess the requisite equipment, technical skills, and/or financial resources to conduct an environmental analysis. The League has, for several years, recommended a policy of ''prudent avoidance'' of exposure to electromagnetic radiation as a common-sense approach to potential--but not yet proven--health

hazards and against such practices as running high power to indoor antennas or to mobile antennas that might expose the vehicle's occupants. The ARRL also argued that amateur stations, because of their intermittent operation, low duty cycles, and relatively low power levels, rarely exceed the 1992 ANSI/IEEE standard. Finally, the ARRL noted that unlike other radio services, RF safety questions already are included in amateur license examinations. But the FCC expressed concern that Amateur Radio operations ''are likely to be located in residential neighborhoods and may expose persons to RF fields in excess of the MPE guidelines.''

For now, the League advises hams not to panic and to read up on the subject. You can download the complete Report and Order by pointing to http://www.fcc.gov/Bureaus/Engineering_Technology/Orders/fcc96326.txt. Other resources are available on the ARRLWeb page at http://www.arrl.org/news/rfsafety/.

General information on RF safety is available in the safety sections of The 1996 ARRL Handbook and in the 15th edition of The ARRL Antenna Book. These materials offer guidelines on how to comply with the ANSI standard referred to in the Report and Order.

>Curtis
>
Its that a repeater can EXTEND the range of traffic & CB is suppose to be short range, (gee I guess thats why they put it on a freq. that old tank commanders had & would get Ionosphere bounce [skip] from other theaters.) Now it can be argued that repeaters have demonstrated in the VHF range the abiltiy to insure solid signals in a small area without extending range. I knew some folks who were thinking about putting up a CB repeater in the 70's. Of course they were gonna buy an AM radio station amp to drive it & use hidden 1/2 channels to keep it a "closed repeater"....

Hardly. There is such profanity frequently used on the Ham bands, such as
80 meters, all the time. It seems that nothing is done about it by the
FCC - although usually the Hams even identify themselves with their calls.

: novices could use VFOs and 250 watts input. It was the same time that
: WN calls ceased to be issued to novices and novices with WN calls
: received new callsigns, ie WN1XYZ became WA1XYZ.

It was sometime in the 70s when VFOs were allowed. However, the input
power was still limited to 75 watts for a while. It later was raised
to either 100 or 150 watts (I forget which) - which was the normal
input power to transceivers in those days.

I hope my memory is still good on the above. I was one of the transition
novices.

>> No [FRS] repeaters...

The FRS docket does NOT prohibit an operator from setting up a VOX mike and re-broadcasting about anything he/she desires over the FRS. No limitations on transmit time, either.

Just two of the MANY problems that we, licensed, BUSINESS operators see in the new FRS - plus the fact that for the first time in history, the FCC is forcing licensed, business operators to SHARE a band with unlicensed, CB-mentality folks. With absolutely NO recourse for intentional interference.

512. HTX-202 replacement battery?

: 2) how would u get it down?

Sure, there are self-supporting towers that tall, and even taller.

Such a construction needs to be disassembled very carefully. The best way
is by hiring a crane. Otherwise, it is best to get some people with
experience to do the job. It can be very dangerous.

Interesting thought. To answer your question, a block in the Phoenix
area is approx. 1/8 mile. E.g., Phoenix is laid out in 1 mile grid
from Central St. being the "0" point E-W. Then the miles are 7th St,
16th St, 24th St., 32nd St.......

> http://206.13.40.11/
>(we had to move to a new server and are waiting for InterNIC to move our
>www.hamradio-online.com domain name to the new server)
>

CORRECTION
Contrary to our first reading, it does not appear likely
that any hams will be subjected to filing EIRs. Word to the wise:
Don't read government legal opinions while your 9 year old daughter is
holding a big birthday party with a crowd of 9 year olds :)

While the ruling does place additional rules and compliance
issues upon Amateur Radio stations, I'd guess that having a
federal standard will help to prevent lots of local
municipalities from creating their own, usually ill
considered regulations on RF emissions.

We corrected the web article shortly after posting on Usenet
(which you can retract once posted). Oh well.

I think the easy solution would be for you and your friend to pick a recognized simplex frequency for your conversations. From your message, I can't deduce that you are doing anything blatantly illegal, but your selection of transmitting frequency is unusual and could put you afoul of the rule regarding care in such selection.

Speaking only for myself, and your mileage may vary.

Interesting play anyway Ed and Kim. I went to the FCC server and got down the whole 1 meg Word Perfect 5.1 file anyway. Haven't read it yead, but I will. It probably is close to the ANSI standard stuff that is already in the ARRL handbook and not a bad view of life anyway. Actually, if you look at the charts and do some real thinking, the curves and distances for you to use in plotting "safe" spacing between you and your antennae, they are not all that unreasonable. When laying out my more recent antenna arrays on low band stuff for the vertical arrays, I did the check runs for the space required by the new projected standards and my operating position.

What I found was interesting from a far different perspective! Considering that feed line lengths are part of the limiting factor on how far away you can afford to go to get to an antenna and the higher the frequency is, the shorter your pocket book gets, a curious thing happens.

There is so much interaction between vertical arrays and other vertical arrays that are higher than them then the whole business of how far away they have to be from the shack is somewhat moot! If you lay out a plant with anything like the right minimal spacing so that the bigger and taller arrays don't tear up the shorter higher frequency fellers, the spacing from the user is so far above the proposed new standards that they are, in effect, meaningless.

To keep a 160 meter vertical from tearing up an 80 meter 4 square array takes about 600 feet of lateral space separation.......

Plot it all out with MN or whatever.. You'll be surprised. It takes real work to figure out how to hold interaction down without spacing separations like that...

After having worked in the broadcast business as well as being a ham, I really don't want to put an indoor loop antenna in my appartment and then feed 2KW PEP into it, nor do I want to put a three element beam on a roof top rotator right above me in the attic and toss 2KW PEP into that either. Surely running the limit on RTTY that way must make it worse even by common sense.

The charrts that are there are interesting. Mobile unit field levels are also interesting when you take a look at what is happening there.

High power VHF stuff does present hazards...

For you to have simply gotten the attention of some people and perhaps piqued their interest in the issue, may have helped..

: your question. Your library will have the complete collection of the CFRs.
: Jeff KH2PZ / KH6

Don't know about Part 95, but when 11 meters was a ham band duplex
was specifically allowed. I did it for a number of friends who were
on 10 meters and who listened to me relaying them on 11 meters. This
was in the Philadelphia area before 1951.

They are confirmed by the U.S.Senate. For the last two years this
has required consultation with Republicans. For some Federal Commissions
there is also a requirement for more than one party to be represented
on the Commission. I don't know if this is true of the FCC.

435 has almost always been zoo for the LA area. Just look at the fact
that it is on an oddball frequency and its input frequency is something
like 1.035 megs away. When they do shut the thing down - which is not
often, the characters do seem to go and infect other machines. I'd
say leave them there.

Fine. But while on HF if you start calling a frequency "the center of
a channel" be prepared to be labeled a lid. Colloquial usage plays
a vital role in what terminology is admissible.

One wonders if Shannon defines "ham radio."

I've never seen longitude given as a negative measurement. Are we to interpret negative west longitude as actually being east? That would place him along the east coast of China, close to Nanjing.

Almost all countries of Asia and Africa offer their citizens amateur radio licenses. Most have tougher standards then us. And the hams of those countries are free to start their own radio magazines and exclude any white hams which might exist in their country.

But most of those folks are too busy spending their time earning pennies a day in order to feed their families. So tell us, Steve, since you're so concerned about those tribes and peasants, how much do you contribute to UNICEF and other hunger organizations each year?

It might be the manufacturers will have to apply a warning label on equipment to remind the installer / user of the possiable electromagnetic radiation problems of improperly installed equipment.

Kind of like warning label " Danger the coffee in the cup is hot and may cause burns if spilled upon yourself "

We will all learn about the EPA requirements for radio transmission and radiated power. I know manufacturers cannot build a handheld that transmits over 7 watts RF power with out going through MAJOR EPA loops and hoops. No body wants to go through all of what the EPA requires for handheld over 7 watts in power, so they do not build them.

I would guess this might also be a good case for antenna heighth. The higher the radiating element the less signal affects the immediate surrounding area

Ed,

The article on your web site " The following is the text of the FCC 96-396 R/O. Was that straight from the FCC or your interpetation of what the FCC was saying ?

I do not think just not having to file a EIR is a victory or sigh of relif, but the intemt of the FCC to require and make the amateur responsiable for proper knowledge and proper installiation / operation of his equipment . This would include his being resopnsible for not exceeding the EPA guidelines for RF exposure limits.

By mere addition of these questions on a test, you are made aware that the government assumes you know about these limits They would most likely hold the licensee responsible for operation with in the EPA RF Exposure limits. This could turn out to be be a major turning point in Amateur Radio.

Recently in Seattle, Wa area some brought a cellular phone company into court to keep a tower out of the neighborhood, although they group lost, still the legal battle was on. I for one will keep a weary eye to the FCC and EPA about my Amateur Radio operations, also will have another look at my station installiation.

the acrobat version came in around 300-400 k, i think. reads up just fine on os/2, windows, and windows 95 machines around the home and shop...and the acrobat version was probably created from the WP version anyway. however, i'll have to look at it again..i didn't notice any links/hot spots in the file...

they could have done it in Envoy 7 or worse, Worldview (where you pay to get a viewer...).

>When in the Lord's name not taken in vain, will anyone EVER listen to
>the idea to post standards in standard text format as in plain ASCI text
>with NO art work, just words.

sometimes, you don't have room for the thousand words when a single picture will do. Collins experimented with something called the Equipment Compiler System years ago -- no drawings, no artwork, no officially released schematics. page after page of stuff like A2R685 x1=1.600 y1=1.500 x2=1.600 y2=2.000. It's apparently a very good way to run a factory, but it's very hard to be able to take a given product and work backwards to figure out what you're looking at. makes life trying to make instruction books difficult. today, i can rip stuff out of the engineering drawings for use in my books blowing off all those errors caused by transcription problems with the "old way". lot easier to find R685 too.

Fast food places are authorized to use different frequencies in different areas depending on
other businesses in the area. Here is a list that you will just have to search and find the
one used in your area.

All Freq. in MHz.

McDonalds:

30.84 33.14 33.4 33.715 35.02 35.06 35.12 67.775 70.245
71.105 82.5
141.3 151.715 151.775 151.895 154.49 154.54 154.57 154.6
154.7 169.445
170.245 170.250 170.305 171.105 171.305 171.905 192.8 457.55
461.0375
463.2875 464.0125 468.2875 469.0125 469.1125 469.1375 469.1625
469.1875
469.3125 469.3375 469.3875 469.5125

Taco Bell:

30.84 33.16 151.400 154.515 154.570 162.200 173.800 457.5375
460.8875
461.0375 461.5375 464.3875 464.9625 466.0375 466.0875 466.5375
468.3875
469.9625

Half of the fun of scanning is the search.

For anyone requiring IOTA EU122 Northern Irish Islands a group from the Ballymena Amateur Radio club will be operating from Rathlin Island off the north Antrim Coast. This Island was used in some of Marconi`s experiments and the station is to celebrate he anniversary of this.

The callsign in use will be GB2MRI (Marconi Rathlin Island). Operation should start today (7.8.96) or tomorrow at the latest. The antennas will be taken down on Sunday morning (11.8.96).

Activity be mostly 20/40/80m on IOTA frequencies SSB & CW.

I`ll be there from tomorrow morning - hope to work lots of you!!

563. Help on RFI from a Toshiba TV

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-07 00:00:00 UTC
From: Keith Stevenson <kstevenson@msmail.bfsec.bt.co.uk>
Message-ID: <4ua440$bvv@detroit.bfsec.bt.co.uk>
Source record: 219314
Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur

Please can anyone help me with my interference. My dad`s new tv is a 28 inch Tosh with prologic surround sound. I am getting 3MHz of noise centred around 14MHz. I have narrowed it down to the leads feeding the rear two speakers. When I disconnect then the noise goes away.

Would it be possible to insert a low pass filter to allow the audio freqs into the speakers and keep the RF back? I presume that such a device would have to have an 8 Ohm impedance.

Any suggestions - or am I barking up the wrong tree?

Oh for the days when I was causing the interference ...

Replies by email would be especially welcome.

Try wrapping a few turns of the speaker lead around ferrite rings -
FX1588 rings (about 1.5" diameter) are very suitable. You'll need no
direct connection to the TV/speakers. They form a high impedance to RF.
Wind them on as close as you can to the TV set, and remember to only 3/4
fill the rings, so as to keep the ends of the winding apart, then tie
them securely with small cable ties, or even string!

If I remember correctly, back when the KWM2A was in production,
a Q-multiplier was a built-in accessory manufactured by the
Waters Co. in Massachusetts. Doubt if they are still being made,
but you might find a used one. I think it fit into the front panel
space otherwise occupied by the accessory crystal pack.

Also, I think Barker and Williamson may have sold a Q-multiplier for the
KWM2(A).

My memory is hazy on this, so the details may be wrong.

fied mechanism, that
>>they understand the FCC rules on this issue. In some situations, >>certain Amateurs may have to file a complex "Environmental Asse=
ssment" >>better known as an Environmental Impact Report regarding their Amateur >>station operation.

In essence, the FCC is relying on the demonstrated technical ability
and proven self-policing track record and allowing amateurs to perform
their own evaluations. If we determine that our stations are in
comliance with current FCC regulations, we need not file anything with
the FCC. The FCC goes on to say that stations that run less than 50 watts
do not need to perform the self-evaluation but are presumed to be in
compliance.

The VAST majority of amateur stations are already in compliance with
these rules. Those few stations who determine that they are *not* in
compliance are expected to correct the situation or to file the EA as
described in Part 1 of the FCC rules.

The FCC then goes on to say, "We want the licensees of such stations to
provide adequately for RF safety. We do not believe, however, that a
detailed EA or other routine environmental filing is practical or
necessary. . . An EA would be evaluated by the Commission to determine
whether the authorization should be granted in view of the environmental
impact. In reality, this leads to a de facto compliance requirement,
since most applicants and licensees who are not categorically excluded
(see above) undertake measures to ensure compliance before submitting an
application in order to avoid the preparation of a costly and
time-consuming EA. For this reason EAs are rarely filed with the
Commission. This has not changed from the existing rules. "

>This could get real interesting. Since the article says the station >location and all occupants are in a controlled enviroment. T=
hey >consider neighbors and such to be uncontrolled. I wonder what will >happen if a neoghbor comes down with some mysterious illne=
ss like cancer >and notices he has been bombarded with electromagnetic radiation from >your station all these years could he hold th=
e operator liable because >he had knowledge of the EPA guidelines of RF radiation?.

This could happen right now, before these regulations are in place. A few hams have been sued, and a few local regulations were attempted, on these grounds. In those cases, most hams have NOT had an easy way to demonstrate that their station did not exceed the limits specified in recognized standards. Nor did those standards have the force of law. With the new FCC regulations, and the upcoming material being prepared by the FCC, hams will have regulations that limit the amount of energy they can radiate into their neighbors homes (IMHO, with a presumption that anything less than the allowed maximum is presumed to be safe), and, more importantly, a tool that will allow them to demonstrate that they are in compliance with the regulations, using OST Document 65 (being revised to OET Document 65) referenced many times in the Report and Order. I have to suspect that we will be better off this way.

>Also I wonder what the FCC intends to do with all the land mobile >equipment as most all is 100 watts. The article implies a mobil=
e >station operating over 50 watts could also not be in compliance with the >guidelines..

The FCC covered that in paragraph 67:

" 67. Although our exposure criteria will apply to portable and mobile devices in general, at this time routine evaluation for compliance will not be required of devices such as "push-to-talk" portable radios and "push to talk" mobile radios used in taxicabs, business, police and fire vehicles and used by amateur radio operators. These transmitting devices will be excluded from routine evaluation because their duty factors (percentage of time during use when the device is transmitting) are generally low and, for mobile radios, because the antennas are normally mounted on the body of a vehicle which provide some shielding and separation from the user. This significantly reduces the likelihood of human exposure in excess of the RF safety guidelines due to emissions from these transmitters. Duty factors associated with transmitting devices that are not "push-to-talk," such as transportable cellular telephones ("bag" phones) or cellular telephones that use vehicle-mounted antennas, would be generally higher, and we will require that these devices be subject to routine evaluation for compliance with general population/uncontrolled MPE limits. Although we are not requiring routine evaluation of all portable and mobile devices, under Sections 1.1307(c) and 1.1307(d) of the FCC's Rules, 47 CFR 1.1307(c) and (d), the Commission reserves the right to require evaluation for environmental significance of any device (in this case with respect to SAR or compliance with MPE limits)."

Now, back to writing the detailed report that my boss is making me write.
:-)

>
They call it PIRATE RADIO because they hang Pirates when they catch them.
That is what the FCC will do if you are caught broadcasting music 5-10
miles on FM Radio without a license. Amateur radio regulations prohibitthe
broadcast of music. Other broadcast of music requires a commercial
broadcast license. You are facing fines ranging from $2000 to $15000 if
you are caught, which means free radio is only free until you are caught.
These are serious fines, the FCC does noto mess around with parking ticket
size penalties. If you choose to use amateur radio FM equipment, licensed
amateurs will quickly track you down and report you to the FCC. Tracking
illegal stations is an Amateur radio hobby/sport.

I have heard of several cases of FT747 transmit problems. It is a design fault in the PA module. Fixed in later versions. It is probably best to junk the PA it as the replacement is very pricy. I don't have the details on fixing it but I know tracing it is very difficult unless you have come across it before. It seems to be fixed, then starts up again. You can use the lower level to drive a different PA or transverter.

570. Re: Its OK to order pizza on 2m autopatch

Newsgroup: rec.radio.amateur.misc

Source record: 219321

The problem with Ham radio, is that most Hams today spend 90% of their time reading the rules, and playing lawyer. Even 10 years ago these assholes were run off the bands. What's left isn't Ham radio, it's Part 97 of the Federal Government. It isn't radio, it's law.

If you and your wife want to order a fucking pizza, or talk about the stock market, or anything, the answer is to feel free, and to tell these pimps to fuck-off and get a real life. Any real Ham wouldn't be on 2m FM anyway, that's the pimp band. Even more so, with Packet (digital pimps).

All the magazines went out of business due to their technical orientation. I think anyone could make a killing by offering a magazine that is oriented to pretend lawyers, and other rule readers in Part 97 operations (the old Ham radio).

You're half right, Karl. Or half wrong. Depending on how you look at it. One way voice paging and selective calling IS PERMITTED on CB and GMRS.

See 95.21(a)(4), 95.27, 95.181(h) for references to paging in the GMRS, and 95.401, 95.413(a)(4) for CB.

>Now, why not use the new FAMILY RADIO SERVICE? These units are low power

Hi! I'm "the original poster"...

GMRS would have been nice, but the local terrain and available repeaters don't have the coverage I need. Unless I'm standing on a hill-top, an HT probably wouldn't even open up the repeater from more than a mile away, and that's not counting the terrain. We're in morraine country, lots of kettle-shaped valleys with ridges between.

I've heard though that one of the area repeaters has some pretty snazzy features (autopatch and voice-mail even, I think) which might be a tolerable way to keep in touch with the family. In another four or five years, my son will probably be ready for a ticket. Until then, they'll just have to suffer like all the other unlicensed slobs. ;-)

By the way, I was *amazed* at the *costs* associated with GMRS! All the local repeater groups expect at *least* $50/year for one-city coverage with no autopatch. The SEWFARS amateur repeater has autopatch and covers all of SouthEastern Wisconsin for only $15/year! Heck, they even have satellite receiving stations in the more distant areas I frequent.

So, which band should a Real Ham use for ordering a [copulating]
pizza? Domino promises 30 minute delivery. Will it still be
performing when it arrives?

Maybe Real (non-pimp) Hams only order quiche, which in my experience
is usually celibate.

Hi, Adam,

One solution might be to use a different newsreader. You can download
a free copy of Free Agent from the Forte website at www.forteinc.com
I think you will find it a much more friendly and versatile
newsreader.

The FCC has actually taken care of that problem - in a way. They stopped issuing GMRS licenses to businesses. If you were on a more appropriate service you wouldn't have to worry about any "CBers".

IMHO, a bigger mistake than creating the FRS was the FCC allowing businesses to crowd in to GMRS.

585. Mini-DXpedition - The ROCK

Date: 1996-08-07 00:00:00 UTC
From: Ken Harrison <ken@cs.sonoma.edu>
Message-ID: <Pine.GSO.3.94.960807121325.19206B-100000@zippy>
Source record: 219336

The Sonoma County Radio Amateurs will be conducting a mini-DXpedition to Alcatraz Island in the San Francisco Bay on August 25th. It will be a one day event and we plan on working 40/20/15 meters SSB and/or CW and 2 meters FM and SSB and/or CW and possibly 70 cm. SSB and/or CW.

The club callsing of W6LFJ will be used. Actual frequencies we are planning to run are (+/-):

40m 7.120 MHz CW
20m 14.075 MHz CW
15m 21.140 MHz CW
6m (?) CW(?)
2m Std. call CW
70cm Std. call CW

40m 7.265 MHz SSB
20m 14.270 MHz SSB
15m 21.400 MHz SSB
6m (?) SSB(?)
2m Std. call SSB
70cm Std. call SSB

2m 146.520 MHz FM Simplex

We will be offering a special QSL commemorating the event. We want to contact YOU! Spread the word!

To find out more you can contact Larry Gustafson, KD6VUM at kd6vum@sonic.net or you can head your browser to:

http://www.cs.sonoma.edu/~ken/scra.html

and click on the Mini-DXpedition announcement.

73,
Ken

Well, it is that time again! It is Hamfest Season, and it is time
for he annual Duke City Hamfest! Here is all the information:

WHEN: Saturday, August 17th - Sunday, August 18th
TIMES: 8:00 AM-5:00 PM (Saturday), 8:00 AM-2:00 PM (Sunday)
WHERE: National Guard Armory, 601 Wyoming NE, Albuquerque, NM

* * FEATURES * *

* VE Testing (Saturday at 1:00 PM) * Outdoor Tailgate Swapfest
* Hourly Door Prizes * Grand Prize Drawings
* Search & Rescue Forum * Contests
* On-Site T-Hunt * ARRL Forum
* MARS Forum * AMSAT Forum
* RV Parking (Sorry, no hook-ups)
* PACKET FORUM - Information, plus the start of NM's Packet Users
Group!!!

TALK-IN FREQUENCY: 147.15 (+ No PL) Repeater

* * PRIZES * *

Grand Prize: Yaesu FT-840 HF Rig with power supply
Second Prize: Alinco DR-150 2 meter mobile
Third Prize: Alinco 2 meter HT

* * PRICES * *

Tables without Power: $10.00 each
Tables WITH Power: $15.00 each
RV Parking: $10.00 per Night
Raffle Tickets: $2 each, 3 for $5

See everybody there!!

Best of 73,
Brian, N5ZGT

587. Arizonan Climbing Humphreys?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-07 00:00:00 UTC
From: paulc@fc.hp.com
Message-ID: <4ub3dp$1q6@fcnews.fc.hp.com>

What did he say? The annual Colorado 14'er radio event is coming up on Sunday, August 25th. Briefly, people try to climb various of the 54 14K foot peaks in Colorado and talk to each other on VHF/UHF radio. It's fun, but it's become obvious that one can talk from virtually any peak in the state to any other peak (only a few of the more interesting combinations have not yet been tried) without much trouble at all. So, I'm hoping someone in Arizona might be interested in climbing Humphrey's Peak (12667 ft. or thereabouts) near Flagstaff that Sunday. I'll be on Sunlight Peak in SW Colorado. It's about 265 miles "straight line" distance between the peaks. Certainly no world record distance or anything, but we just use HT's and halfwave (Hot Rod, or equivalent) antennas, generally. I may haul a 4 element beam up there for the heck of it.

I believe we'll be on 146.46. Let me know if you're interested and I can email more info and we can coordinate. We'll probably be on the top at 9am and, weather permitting (which it usually doesn't) hang around for a few hours...

This posting reminded me of the time my son climbed Mount San Gorgonio (just northeast of Palm Springs CA). San Gorgonio is the highest mountain in Southern California...and he was able to hit most of the repeaters in So. Cal as well as some in Nevada, Arizona and Mexico. He speaks fluent Spanish and the Mexicans were amazed when he gave his location as a mountain north of Palm Springs.

Here it is:
HTX-212 Manual page 19

To expand the transmit frequency coverage, hold down the F+DTMF
while you turn on the HTX-212. The new frequency ranges are:

Memory mode: Xmit 143.000 - 149.000 Mhz
Recv 143.000 - 149.000 Mhz

Note: To return to the default frequency ranges, you must
reset the transceiver. Page 18

Hi All, this WA6MBZ following up,

In the 1.18 and 1.19 documentation the Msys author talks about working
on a Windows 95 version of Msys, saying that it was in the planning
stages and not to expect much more from the DOS version of Msys because
there is not enough room to provide further major enhancements.

I am afraid Packet radio will be stuck in the text mode not because of
the BBS software, either in DOS or in Windows 95, but because the
bandwidth of packet barely carries text traffic, as it is, at 1200 or
9600 baud.

It has been quite a while now and I have not heard about any new
developments and thought I would ask around.

>Did I put down an individual wife or make a general comment?

Let's follow this chain of statements.

A) You say all ham wives are fat and ugly. B) My wife is a ham wife. C) You must be saying my wife is fat and ugly. According to my understanding of logic, you just insulted my wife with your so-called "general comment".

In fact, it's even worse than that since my wife and daughter are also hams. Therefore, all your "general comments" on hams logically apply to them also.

The fact that you are wrong, and we may even find it amusing, doesn't change the fact that you insulted them. If you intend to be rude, at least have the guts to acknowledge it rather than hiding behind the excuse, "well, I didn't name (him, her, you) so it wasn't really an insult".

>You want to buy, I am ready to sell.

I have all the equipment I need or want right now; but I've never seen any local ham have any trouble selling his/her equipment at swap meets or club meetings as long as it was fairly priced. Of course that requires contact with other hams.

***** Breaking News Story *****
FCC Ruling Prohibits Unreasonable Restrictions on TV Antennas
by Ham Radio Online, 7 August 1996

In a major ruling, the FCC declared void local laws prohibiting
or restricting the use of small wireless dish antennas.
More significantly, the FCC declared that use of small dish
antennas and television receiving antennas can not be restricted
by "any private covenant, homeowners' association rule or similar
restriction on property within the exclusive use or control of
the antenna user". Under the federal pre-emption, all homeowners
must be allowed to install TV antennas. Longer term this ruling may
have important ramifications for eliminating restrictions on Amateur
Radio antennas.

The complete story is available at Ham Radio Online at:
http://206.13.40.11/
(we are waiting for InterNIC to get our domain name pointed at our new
server).

From: adamkern <adamkern@tiac.net>
Message-ID: <4u96hd$8bm@news-old.tiac.net>
Source record: 219388

Hi All!

Along with KE1BG, I am starting a new HF youth net. This net has been going for a few weeks now, and takes place on 3.970 Mhz every sunday night at 8:30 PM eastern time. This net is most definitely open to all hams!!! If you are around sunday evening, please check in! We are going to start having discussions on hot topics in ham radio. It should be a very interesting and informative net.

This net will be booming out to your QTH from the metro Boston area, Massachusetts. Right now I'm the NCS, so listen for me. Hopefully, Sunday night I will have a bunch of new antennas up for 80m, and a new amp in the near future, so I hope to have checkins from all over.

AGain, all hams are welcome to check in! This is a continuation of a successful local 2m youth net that has drawn a considerable crowd in the area. In the future, although it is as yet unconfirmed, we might be offering the net at different times on other frequencies as well, mainly to take advantage of emerging propagation.

Once more, it's the 75 Meter Youth net, every Sunday night, 8:30 PM atlantic time on 3.970 Mhz LSB.

Hope to see you all there!

73,
Adam Kern

>
>--
>_____________________
>robert mailto:nix@gate.net

Ramsey sells a nice little kit that will broacast stereo FM at the legal limit for about 30 to 40 bucks. This won't reach the 5 to 10 mile mark you want, but will cover a block or two if you have good antennas and choose a part of the band that is relitivly unused in your area.

You could add an amplifier, but that would be illegal. There are large fines if someone has been complaining, which the big boys will do.

By "your own music", I assume you mean music that you and your friends have written and performed. Anything else would be a copyright infringement. I doubt you would have much trouble unless you started selling advertising. (Then EVERYBODY would be on your butt!)

If you keep the power at or below the legal limit, you can probably do just about anything you want. The signal won't get far enough to get you in trouble.

: surface where a person might stand, and you're running no more
: than 1,000 watts ERP (that's your output power minus feedline
: loss and plus antenna gain), you're probably Ok. You'll need to

This is a bit misleading Gary. It should be output power, minus feeline losses, multiplied by the antenna gain. For example, 150 watts out of transmitter, minus 10 watts feedline loss, is 140 watts at the antenna. If the antenna has 10 dB gain, then the ERP would be 140 times 10 or 1400 watts - which is too much.

So much for encouraging better antennas, rather than high power linears. There is now little reason to use an efficient antenna - as the penalty is the same either way. It is much easier to install a linear than a good antenna system.

Of course, you could limit the power under 50 watts, and install a very good antenna. However, I wonder if you would have to have a station that was incapable of greater power output?

I suspect that the new directive is only going to make a bunch of Hams lawbreakers.

619. Radio/Ham Equip & WTB: 900 Tk HT, Johnson Mobile, Yaesu FT40

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-07 00:00:00 UTC
From: eplatt@wco.com
Message-ID: <32081743.12000893@news.wco.com>
Source record: 219397
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Must Sell ASAP: (No reasonable offer refused):
(2) Uniden FPS910TS 900 trunked HT. 9 System, 9 group 'brick' radio (rather large, a tiny bit more than the BC1/200 HT). Comes with 1 brand new batteries, 2 older batteries, 2 rapid chargers (not available anymore, hard to come by!!!) and 2 vinyl holster (no belt loop, just more for shipping/travel. $200/ each, or $375 for all 2. Invested much more into it. 2 currently programmed for TAC use.

(1) Johnson 9 channel 40?? (maybe 60) watt mobile. VHF. Was from Florida Sherriff or police which went to 800. Programmable by computer from Johnson Dealer. Must use external speaker (I can dig one out, standard 3.5mm plug), hand mike, and power cord included. GREAT radio. Scans, PL, everything. $250/bo.

(1)Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, Dual watch, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) (PLEASE don't ask how to do it, I was overrun by more questions on how to do it than offers to buy..)Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $280/BO.

WTB: Icom U-16, must be in good condition. Make offer, or trade for one of the above??

WTB: Yaesu VX-10.. Make offer, trade for ALL of the above?

All prices plus shipping + COD. I am NOT a company, just a collector of stuff I no longer need. <GRIN>

ALL PRICES NEGOT.! I need to sell, so give me an offer!

eplatt@wco.com, or call me anytime at 415-939-1037.

621. HTX-202 ER2 Fix

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-07 00:00:00 UTC
From: N6UZS <n6uzs@juno.com>
Message-ID: <3208687E.3151@juno.com>
Source record: 219399

Ok folks I've been reading the threads over the past 2 days and
have realized one common item here. Everyone so far has attributed
the ER2 error on the display for being RF induced by 5 watts thru
the duckie or whatever. I may have missed a post or 2 on the topic
but if anyone hasn't heard the REAL reason why the 202 does that CPU
reset with the BP8 I will explain why right here to the best of
my knowledge.

First of all the entire problem was described to me as a voltage ripple
problem being produced by the battery at the voltage regulator board.
This ripple is all it takes for the sensitive CPU to reset itself and
go into ER2 message. Nothing worse than this occuring to me especially
when I was right in the middle of reporting a 2 car crash and all
the sudden "POOF" no radio!

To resolve this ripple you need to filter it some way. My friend Jeff
who has made numerous trips to the Tandy Repair center here in
Santa Fe Springs, California finally got the correct fix info from
a tech there. You place a small value Picofarad cap between the
positive and negative terminals right on the other side of where
the battery makes contact and thats all there is to it.

Please note I have to make a quick research call to my buddy Jeff
sometime Wednesday and I'll post the proper capacitor value that is
required for this fix. Ill also provide info on how to contact the
Tandy Repair center here in California if you have further questions.

73,
Richard.

>Gary Coffman KE4ZV

I think the british would argue with that. The magnetron was
developed in England, and was part of the technology transfer to
the U.S. when it entered the war. Almost every radar book credits
the british for the invention. The japanese magnetron became
famous when it was used to cook food for less than 99 bucks...

73 is all you need. It means "Best Regards" there is no word
"Best Regardss".

That's because Part 97 rules and most licensees are white (over 50,
and fat, and wear stupid hats). African tribes and asian peasants are
strictly non-recruited, nor welcome. The magazine is designed for
that segment of Part 97 rules (the old Ham radio) which fights for
spectrum not for technology, but for nostalgic radio of the 30's.
To send "CQ Contest" and see who gets the most points. The old
white man with the most points gets his name in print (about 6 points
Helvetica) and pees all over himself in the excitement...

Having been a ham for 20 or so years, wearing a ham HT on my belt for a good portion of that time, and wearing a commercial HT on my belt during working hours for several years, and for the last 6 months undergoing chemotherapy due to lymphoma (which is, interestingly, cancer of the lymph nodes located in my abdomin, near where the HT antennas were located), I don't think I'll get too excited if I have to document compliance with a regulation designed to lengthen my life.

Cancer isn't any fun.

Sure, I know I'll get flamed, because I don't _know_ that the cancer was caused by the HT's, but then again, I don't _know_ that thay _didn't_ cause it.

>for mountain top contacts, let me know. A couple of years ago
>someone did contact a Sandia Peak (Albuquerque) station from another
>peak in the area...

This is truly great fun. Several years ago, I climbed Guadalupe Peak,
the highest (8750 ft) peak in Texas. I worked a guy near White Sands
(about 150 miles) through the El Paso repeater (about 100 miles). Also,
I worked several repeaters in the area including Midland (about 150 miles).
I used a 4 element beam and a HT running on 2 watts! (I got all the way to
the top and realized I forgot the adapter to my 13.5v power pack) :-(

About the same time, down in Big Bend National Park, I was in the Basin
Campground and couldn't hit the Ft. Davis repeater (100 miles to the
north). Then, I got an idea. I pointed the beam to the flat faced
mountain to the east and *bounced* my signal out of the basin and hit the
Ft. Davis repeater just fine! Again, a 4 element beam and a HT running
about 5 watts at that time.

Have fun. Wish I were there! :-(

>Just two of the MANY problems that we, licensed, BUSINESS operators see
>in the new FRS - plus the fact that for the first time in history, the
>FCC is forcing licensed, business operators to SHARE a band with
>unlicensed, CB-mentality folks. With absolutely NO recourse for
>intentional interference.

No, *not* the first time. Part 15 walkie-talkies were legal on CB channels
from the late 1950s until the early 1980s, and during most of that time
normal CB operation required a license.

Also, GMRS and FRS do not share a *band* -- they share seven simplex channels.
The existing duplex channels are used exclusively for GMRS, and the other seven
FRS channels are not available to GMRS.

Hi!

I just got my Tech Plus ticket a few weeks ago, but I don't have a rig!

I won't need my hand held too tightly (I'm an electrical engineer who's been interested in radio since I got my Novice ticket at 12 years old), but I'd rather start with a proven design than strike out on my own for my first homebrew rig.

I'd like to build a CW transceiver as SIMPLY and CHEAPLY as possible. QRP is fine. Any band is fine (I'll be getting my General ticket soon). I would kind of like to keep it in one piece but if separate transmitter and receiver would be better for some reason, I'm open to that too.

Pointers to circuits described in magazines would be nice, as long as they're accompanied by at least a short description of the project and how much it's likely to cost me in parts. Kits might be okay too, if they're really inexpensive.

Some ham catalogs came in the mail and struck price-shock into Bonnie, my wife. If I can show her that a homebrew rig built out of cheap parts and/or salvaged junk is all I require, her relief would be immeasurable.

Any help would be much appreciated...

There's no reason I can think of that the old Heathkit QF-1 wouldn't work; it's just not as "sanitary" an installation as that afforded by the Waters built in unit. The QF-1 has a flexibility advantage (selectable null, peak, etc) over the Waters, however. Waters manufactured a lot of nice accessories for the Collins line; unfortunately one of their competitors virtually 'stole' some of their ideas and began marketing ersatz products.

Well, Gary, since you aren't in CA., we can't get you to do the testing,
but maybe we can get one of them 6 land tech's to go sit on the beach
with an HT and come back and tell us how long it took him to work
Hawaii. Better we find a young one, as he is gonna be there for a
while.

So I guess I should revise my answer:

1. Usually, 3 blocks.
2. From a mountain top, 60 miles.
3. From the beach in California, all the way to Hawaii. (but don't hold your
breath while waiting for the band to open).

I have the above radio recrystaled to my 440 repeater system. The problem is the TX oscillator drifts a lot with temperature. When applying heat/cold to the crystal itself, the freq. is fairly stable. I can't seem to locate any 1 capacitor or transistor that is causing the drift. The freq. is set with a ferrite core coil rather than a trimcap, but I don't think that's the problem since the RX oscillator is tuned the same way & it doesn't have the drift problem.

Anyone have contact info for Regency or happen to have the schematic for this radio?

Bob NO6B (KE6TZF)

>one can choose from. ;-)

The same thing happens with TV tuners -- most these days will tune cable channels 1 through 125 as well as broadcast channels 2 through 69. Since channels 2 through 13 are the same in both modes they're counted once, but the UHF and other cable channels are counted separately, so these tuners are often claimed to handle 181 channels.

649. GB2RS News 11th August 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-08 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <839565054snx@llondel.demon.co.uk>
Source record: 219224
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 11th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RSGB will be holding another amateur radio car boot sale at its headquarters in Potters Bar next Saturday, the 17th of August, from 10.00am to 4.00pm. The RSGB HQ building will also be open, with the bookshop and GB3RS shack available to visitors, as well as the National Amateur Radio Museum and Library. Morse tests are available on demand between 11.00am and 12.30pm, but don't forget to bring two passport-size photographs and the appropriate fee with you. For further details contact Marcia Brimson, 2E1DAY, at RSGB HQ, on 01707 659015.

Listeners to the 2 metre GB2RS news broadcast at 9.30am local time in Cornwall should note that from the 1st of September it will be made through the north Cornwall repeater on channel R5 and not on S21. This will be for a trial period of four months. Reports will be welcomed either by the newsreader or direct to GB2RS manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book. The purpose of the experiment is to improve coverage in this difficult terrain.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Liberia - EL - Carl, K4YT, is planning activity for two weeks from Monday the 12th of August. His callsign is not yet known.

From St Barthelemy in the Caribbean, I4ALU will sign FJ/I4ALU on CW on all bands from Tuesday the 13th until the 25th of August.

And a major DXpedition from Midway Island is due to start next Sunday, the 18th of August. An international group led by Frank, AH0W, will be active for one week signing AH0W/KH4.

Now news of a special event station:

GB4ASH is on the air this weekend, the 10th and 11th of August, from Ashfield Show near Mansfield. The station will use HF, VHF and UHF, and modes include ATV and packet.

Next the Rally News:

The GB3WD Car Boot Sale takes place today, the 11th of August, starting at 10am. The event is at Sparkwell Wildlife Park, Plymouth.

The Flight Refuelling Amateur Radio Society Hamfest also takes place today, Sunday the 11th. The event takes place at the Flight Refuelling

Sports Ground, Merley, Wimborne in Dorset and doors are open from 10am to 5pm. Attractions include a bring and buy sale, craft exhibitions and field events. Talk in is on S22.

The Derby Mobile Rally takes place at Littleover Community School, Pastures Hill, Littleover today, Sunday the 11th of August. The event features a large radio and computer junk sale. Doors open at 9.30am.

We have received notification from RadioSport Limited that, due to other commitments, it has reluctantly decided to cancel the Stafford Amateur Radio and Computer Show. The Stafford show had been scheduled to take place next Friday and Saturday, the 16th and 17th of August.

SMC is holding an open day at its Chandler's Ford headquarters next Saturday, the 17th of August. Doors open at 9.00am and for further details you can call 01703 255111.

The Red Rose Rally takes place on Sunday the 18th of August at Horwich Leisure Centre, Church Street, Horwich, near Bolton. Please note that the location is just off junction six of the M61 and not junction eight as stated in August RadCom. Doors open at 11am, or 10.30am for disabled visitors. Features include a bring and buy sale, special interest groups and an RSGB stand. For further details telephone 01204 62980.

The Great Eastern Rally takes place at the Cattle Market, Hardwick Narrows in Kings Lynn, Norfolk, next Sunday the 18th. The event features an indoor exhibition, RSGB book stall and membership information stand, as well as an outdoor car boot sale. Doors open at 10.00am or 9.45am for disabled visitors, and talk-in will be on 2 metres channel S22. For full details, please ring 01553 765614.

The Cardiff Amateur Radio and Computer Fair takes place at the Star Sports and Recreation Centre, Splott, in Cardiff also on Sunday the 18th. Doors open at 10.30am and for further details please ring 01222 613070.

The Amateur Radio Caravan and Camping Club's next rally takes place near Hereford from Friday the 23rd to Tuesday the 27th of August. Caravanners or tent campers wishing to participate should contact Alan Gard, G4LWA, on 01462 811208 for more details and a booking form.

Now the beacon news:

OH2B, near Helsinki, is another new five-band HF beacon now operational in the International Beacon Project network. It transmits for 10 seconds in turn on 14,100, 18,110, 21,150, 24,930 and 28,200 kHz with stepped powers of 100 watts, 10 watts, 1 watt and 100 milliwatts. The antenna is a multi-band vertical and the beacon has been heard with good signals in the UK. A five-band beacon has been shipped to Madeira and it is hoped it will be operational soon as CS3B.

The RA has recently approved a 6 metre beacon in Darlington, County Durham. GB3IFX will operate on 50.275MHz.

Repeater news next:

The Orkney and Caithness 2 metre repeater GB3OC, which operates on channel R2, returned to service on the 27th of July, having been off the air since May due to a logic problem.

The Radiocommunications Agency has recently approved a 2 metre repeater at Berwick-on-Tweed. GB3BT will operate on channel R4.

And the RA has also approved a site change for the GB3WM 2 metre repeater on channel R2. It will move to a new site near Birmingham.

Now for the contest news:

The European DX CW Contest is taking place this weekend, the 10th and 11th, and finishes at 2400 UTC on Sunday. Brief rules can be found on page 23 of the August RadCom.

Next weekend the SEANET SSB Contest takes place for 48 hours from zero hours UTC on Saturday the 17th. Brief rules can be found on page 23 of the July RadCom.

We know of no VHF contests this weekend, but the RSGB 432MHz Fixed Station Contest takes place next Sunday, the 18th, from 1700 to 2100 UTC. The rules were in last September's RadCom.

And now the solar factual data for the period from the 29th of July to the 4th of August, compiled by Neil Clarke, G0CAS:

The sunspot region that rotated into view on the 26th of July is the same one that produced the X-class solar flare on the 9th of July. So far during this rotation it has only produced small and insignificant B class solar flares, although it has increased other solar parameters. Solar flux levels increased to 80 units by the 30th, and averaged 79. The 90-day solar flux average on the 4th was 71, one unit up on last week. X-Ray flux levels increased to A8.3 on the 30th and averaged A7.3 units. Geomagnetic activity was at 'quiet to unsettled' levels. The 31st was the most disturbed day with an Ap index of 14, and the average was Ap 10 units. Solar wind data for the period from the 22nd to the 28th of July saw solar wind velocities at normal levels of around 350 kilometres per second. Particle densities increased from 10 to 40 particles per cubic centimetre on the 28th. Bz remained around zero nanoTeslas until the 28th when, due to the sudden impulse, it became mostly southerly, with levels of up to 12 nanoTeslas.

Now the ionospheric data for Central France for the period from the 26th of July to the 1st of August. The F2 daytime critical frequencies averaged 7.0MHz and the darkness hour lows averaged 3.0MHz. The daytime highs took place between 1900 and 2000 hours and the darkness hour lows took place between midnight and 0400 hours.

And lastly the solar forecast. This week the quiet, spotless, side of the sun is expected to be looking our way. Solar activity is expected to be very low and solar flux levels are expected to be in the mid to high 60s. Geomagnetic activity is expected to be 'quiet to unsettled'. MUFs

during daylight hours are expected to be about 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 10MHz. The peak of the Perseids meteor shower will take place today and tomorrow.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Juliet and M1 Alfa Victor series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Golf series.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 AUGUST AND FORECAST FOR 09 AUGUST - 11 AUGUST

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 07 Aug
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.9E+04
Daily Electron Fluence >2 MeV: 1.8E+07 (normal)
X-ray background: A8.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Aug 10 Aug 11 Aug
Activity Very Low Very Low Very Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Aug: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 07 Aug
Learmonth 4 2211 1111
Fredericksburg 5 5
Planetary 5 5

Observed Kp for 07 Aug: 1221 1221

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Aug 8 Quiet to unsettled
10 Aug 8 Quiet to unsettled
11 Aug 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
08 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
09 Aug Normal Normal Normal
10 Aug Normal Normal Normal
11 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
08 Aug 11

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values.
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values, with spread F
observed during local night.
Hobart: Near predicted monthly values.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
09 Aug 10 near predicted monthly values
10 Aug 10 near predicted monthly values
11 Aug 10 near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

653. OPINION on ICOM TC-T22A NEEDED!

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-08 00:00:00 UTC
From: steven@rain.org
Message-ID: <4uddhq$t5l@news.rain.org>
Source record: 219228
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm looking to by a new HT and I've narrowed my choices down to three models. I am posting this message in three parts according to brand and model to reduce confusion. I'm looking for people who have experience with the Icom IC-T22A. I'm impressed with the features but not sure on audio quality. If you have this radio, please let me know what you think of it, good or bad. Thanks in advance!

655. Re: Crystal Control

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-08 00:00:00 UTC
From: Jake Brodsky <frussle@erols.com>
Message-ID: <320A6DCB.5581@erols.com>
Source record: 219230

When I was licensed in 1975, Novices were limited to 75 W and strictly crystal control. The crystal control issue went away in the same year. I think the crystal control thing was because many novice hams were expected to build their own radio gear and crystal control was one of the few ways the FCC could ensure these inexperienced hams would have a clean, stable signal that stayed put. I think that by 1975, most new hams were either building kits or they were buying manufacturer's gear...

Copyright and Editorial Notice
==============================

Last Revised: 6/1/96

Amateur Radio Newsline is a weekly audio service produced by
Newsline, a service of the Westlink Radio Network. Editorial
comment, news items and all other business should be directed to
Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com
Phone/Fax - +1 805 296-7180
Fax senders should wait for voice prompt, then press start.

The transcribed version is produced by Dale Cary, WD0AKO
from materials provided by Newsline. and is jointly distributed
to online services and bulletin board networks by Steve Coletti
and Dale Cary.

All others are asked to not post Newsline to any BBS or
network without the permission of Steve Coletti. There have been
distribution problems with many of these networks recently and
posting Newsline to an echoed conference because you haven't seen
it there doesn't mean it hasn't already been seen elsewhere.
Reposting causes wasted bandwidth and additional telephone
charges to be incoured by the sysops of these volunteer networks.

The copyright owner of The Amateur Radio Newsline is Newsline.
Permission to reuse all or part of either this written, or the audio
form requires that the item be taken in it's entirety, not be subject
to any further editing or commentary, and that full credit is given to
Newsline as the source.

Permission is granted to all amateurs who want to transmit the
audio version in it's entirety over nets or repeaters. The text
version may be used for packet distribution as long as it is sent in
its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in it's full form over voice
or digital forms of Amateur Radio, it is recommended that the closed
circut advisory be deleted. Audio, Computer, and Packet

It is usually your Liberal Democrat Enviromental types that are behind this kind of stuff, Gore is a big one. I don't see how that much tax money will be generated from this, but I also don't see how they are going to come up with the staff to enforce it.

We just need the Federal government to stay out of our lives. Its bad enough that they want to restrict the heck out of internet, but now they are trying to cripple Amateur Radio!

Does anyone know off hand if they are using the IEEE C92.1 limits? If so, Anybody trying to transmit at the normal 100W in a residential neighborhood (ie, low wire dipole antenna) may be in trouble. Forget about using attic antennas. The standard penalizes efficient antennas. I also believe the limits vary wiith frequency; I know that that the allowable ERP at 800MHz is only about 0.4W, compared to the previous 7W Max. transmitter power (the old standard did not consider antenna efficiency). I also know that 800MHz products designed well below the 7W transmitter power level usually did not meet the 0.4W ERP or that other parameter, SAR (for products held close to the ear). Yes, our handheld devices may be exempted but my point is that, if FCC is using the 1992 IEEE standard, amateurs in residential areas (a large portion of the ham population) will at the very least be marginal at 100W, if they use wire dipoles, G5RV's, slopers etc., and I believe the small 600W linears will be out of the question. I hate to sound like I'm sounding a false alarm but I'm not ready yet to buy into ARRL's contention (D. Sumner) that the new regulation will show how safe amateur installations really are. I'm sure he has a high tower to take advantage of 1/R**2. The new IEEE limits are much lower than the previous standard, but we will not start seeing this until after we start making the measurements.

672. WWII Transceiver for sale

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-08 00:00:00 UTC
From: gianna@jhunix.hcf.jhu.edu
Message-ID: <4udb1e$jb7@news.jhu.edu>
Source record: 219247

I have a brand new WWII bomber radio for sale, It's a Bendix
TA-12b, with attached "Date of Manufacture" tag of 05/31/44. The di-
mensions are 16"w, 11"h, 11"d, Has a gray front panel, Serial #C1-797,
weight of 35 lbs - 4 oz, Input voltage of 25, It sits on a seperate
detachable shock mounted base (included) and has two chrome handles
on front panel for carrying. Also included is a remote control assembly.
The front panel of radio has a screw cap over the remote switching but-
ton that works with the remote assembly. All of the internal parts of
the radio are new. This has never been used. I believe this transceiver
was capable of over 4,000 different frequencies. It has the following
dials and knobs:
1 channel "selector" switch (4 positions)
4 channel "dial and lock" knobs
4 channel "Loading" knobs
1 female "IPAP" connector
1 female "PAP" connector
1 Dial "Amperes RF" antenna current (0 - 5)
1 Porcelin antenna connector
1 "REC" antenna connector
1 16 male pin connector on left rear

There are 4 locking straps on both sides of panel

I also have a machine gun turrent control assembly for sale.
Mfg by General Electric for the Glenn L Martin Co.
Model #2CGD 50 (cal) USC-3
24 Volts, has two red buttons on the two pistol grips
one is marked "M", the other "HS"
On the panel face is reset breakers for "Control"
"Gun" and "Booster" and a switch for "Both Guns" and
"Individual Guns" and also a swith with red hinged
cover marked "Gun Switch"

GE name plate reads "T-8601570-G-2"
"1693313- S"

ANY OFFERS ???????
Thankx

The radio can be seen at the following area

http://jhunix.hcf.jhu.edu/~gianna/bendix.html

The Machine gun turrent control assembly is at

http://jhunix.hcf.jhu.edu/~gianna/turrent.html

Thankx again

675. Re: CORRECTION - FCC Ruling Will Require Some Hams to File Environmental Impact Reports

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-08 00:00:00 UTC
From: Jake Brodsky <frussle@erols.com>
Message-ID: <320A7159.7682@erols.com>
Source record: 219250
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.policy,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

It is worth pointing out that the FCC standards are from the NCRP and they represent a total exposure over a six minute period. As long as you are running HF sideband (or heaven forbid --even morse) your duty cycle is such that you will not be likely to get a continuous six minute exposure.

Remember that a sideband signal's average power is typically 1/4 of the PEP and that unless you are quite chatty (the FCC thinks we'll transmit and receive 50% of the time) you are unlikely to hit the limits of your exposure at 100 watts. So my Kenwood TS-50 will likely still meet the standards set by the FCC even though I typically run 100 watts. As for how I'm supposed to document this and where I'm supposed to file this report --that has yet to be determined.

Does it include those (MANY) of us who *CANT* put up a tower; who operate with apartment balcony antennas or wires attached to houses? I can just see all the city boards gleefully getting rid of ham radio with the "We won't allow a tall tower, and the FCC won't allow power with a low antenna" opinions. I guess it is time to dust off the HW-8.

We are trying to promote ham radio other than 2M thru repeaters, and now we get socked with this. Or will it be like all those 300 watt Italian stations...

>end-fed wire from your balcony that would be nearly invisible. If lucky,
>you could leave it out if no one notices, or you could "throw it" out
when
>you want to operate and then reel it back in.

If I were just using a very slender wire, would the antenna still be safe
for transmission? The MF/HF transceiver that I'll most likely have access
to puts out 100W PEP, but I couldn't find a way to turn down the power,
and I don't exactly want to endanger the neighbors.

What would be the thinnest wire that I could safely use? (Also, would I
want copper, steel, aluminum, or some mixture for this kind of use? I was
thinking of using a copper-clad steel wire, but I was also thinking that
almost everyone else here has more experience)

>You might be surprised to find some landlords will allow you to put up
ham
>antennas, as long as you don't cause any permanent damage to the building

>(and don't cause RFI to other tenants!)... try asking them. I travelled
>around quite a bit when I was in the Air Force and got permission for my

The Richmond Amatuer Telecommunications Society (RATS) holds their annual Hamfest around January. Its called Frostfest.

The Virginia Beach club holds two large ones each year and I believe the next one is in September. It usually gets listed in either 73, QST or some of the other magazines. These are some of the nicer ones in the area.

> last part though.

Not quite right.....Power in the GMRS is 50-watts. Repeater, mobile, base.

The GMRS service allowed both personal and business communications at first.

A few years ago existing business use was grandfathered in provided there were NO changes in status, ie. change number of mobiles, change station location, etc. Any change would trigger and denial of license renewal.

There is nothing in the rules to prevent changing whatever you want to use your repeater system. I know, I use to run two GMRS repeaters and we would charge from as low as $25.00 per month for mom and pop, to up to $200.00 per month for business use. We did make a profit on repeater useage.

>what that's all about???

Congratulations on the new license, Scott. 10-10 is an organization
that was formed to help keep ten meters 'used'. During the downstroke
(now) of a sunspot cycle, not at many people use the higher bands.
Anyway, you can join 10-10 by working 10 people and collecting their
numbers. 10-10 will give you a number when you join. Somebody
else will have to tell you where to sign up.... There are also a bunch of
different 'chapters' of 10-10 international and they pass out individual
awards. Next time you hear somebody on 10 who has a number,
ask him for the address to send in and get your own.

The problem is that the FCC and big business have a virtual lock on all
RF spectrum. For example - to setup a small radio station is beyond the
fiscal abilities of most people and communities because the big guys
suck up spectrum. The perfect example of that is WDGE here in Providence
that broadcasts on both 99.7 and 100.3 which is a complete waste of
spectrum.

BTW - Christian Radio? Like there aren't enough churches and bible thumpers
around?

Tony (Who remembers that Christians are responsible for the best and
bloodiest of wars.)

>Look/listen around.

The problem is, Andy, is that it gives your hysterical neighbor, the do-gooders in your city planning department lawyers for some "Public Interest Research Group" and other associated crazies a "hook" to use in starting litigation. Just wait until they demand to see your EIS and then threaten to challenge its sufficiency in court unless you agree to comply with their conditions, including th right to audit. Complaints of non-compliance are almost sure to follow when they hear any interference on their cheap no type-accepted TV they boaugh at Uncle Sam's Barain Barn. It opens Pandora's Box and that spells trouble for anyone with a hobby these anti-technolgy Luddites don't share or understand.

>monitor the band with a spectrum analyzer and would most likely find a
>'pirate' station within a few days of it's debut.

Which brings up something else that I've often wondered...

Why is it that these religious stations can own and operate a seemingly endless number of low-powered FM translators? In many cases, these translators are relaying distant programming received via satellite, not merely filling in coverage "holes" of a local station (as is the required use of translators for commercial stations.)

But yet, if an individual were to construct a similar low-powered FM station, for the purposes of broadcasting original, non-commercial programming to a community, the station is then an illegal "pirate" operation to be found and removed from the airwaves.

What's wrong with this picture?

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #176 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 16-Aug:
-
1. FCC Adopts New RF Safety Standards for Amateurs
2. Commission Division Chief Honored for Distinguished Service
3. President Appoints New FCC Commissioner, Replaces Barrett
4. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
5. Special Event Station Calendar
6. Ham Radio Forum on MSN (Microsoft Network) Revived
7. Philadelphia's Franklin Institute Station Gets New Call Sign
8. OMIK Elects New Officers at 44th Annual Convention
9. Weekly Propagation Forecast
10. "The RAIN Dial-up" from Chicago
11. Thomas J. Kirby, W1EJ, NH State Senator, Avid VHFer, SK
12. Gioia Marconi Braga, Daughter of Inventor, Dies at 80 in NYC
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family of
North Webster, Indiana, and users of the N9SBH repeater system,
where "This Week in Amateur Radio" is heard in Elkhart, Warsaw, and
Ft. Wayne on 224.16 and 146.505 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
```

It depends on perpective. As I understand it, any non-commercial station (ie: pbs affiliates, community owned and others) can do the same. Each one is appropriately licensed by the FCC and assigned call letters. IDs need only be made twice each day. There are many of these than we are aware of, especially in rural and mountain areas.

I should have place a "smiley" up there. I do know he's on the West Coast.

>programs like logsat use negative for south and west.

My navigation charts of the North Pacific don't have negative
longitude on them. Neither does the Nautical Alamanac.

I received my navigation training while serving in the US Coast Guard.
No mention of negative longitude was ever made in any of my classes.

Aren't the "North" and "West" in Steven's position above redundant?
If he's going to use +/- then N and W aren't necessary.

Help celebrate the 150th Birthday of the Smithsonian Institue. NN3SI, the Amateur Radio Station at the National Museum of American History will conduct special operations 1400-2300 UTC, Saturday and Sunday, 10 and 11 August on or near 7250, 14250, 18150, and the 40 meter Novice band, as conditions permit.

729. ScanWare - End of FCC FRS

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-09 00:00:00 UTC
From: scanware@sincom.com
Message-ID: <320a949a.19683072@news.cais.com>
Source record: 219157
Cross-posted to: alt.radio.scanner,rec.radio.amateur.misc,rec.radio.scanner

In the fall of 1993 ScanWare Associates released version 1.1 of the FCC Frequency Retrieval System (FCC FRS). In the following months improvements and enhancements were made until the latest version, 2.15 was released in the summer of 1994. The program has proven to be so stable and user-friendly since that time that no further changes were deemed necessary. The FCC FRS as a DOS-based program has enjoyed exceptional popularity and has proven itself a valuable tool to over 1000 customers who have used and continue to use the program. Only twice in the entire history of the FCC FRS has ScanWare been asked to refund a purchase. It is believed that no other frequency retrieval program either DOS or Windows based can make that statement. Judging from user comments that we have received, no other retrieval system has ever produced the level of user satisfaction that ScanWare's FCC FRS has provided.

It is with much personal sadness that ScanWare Associates announces that on September 1st, 1996 we will no longer be accepting orders for the FCC FRS or any related products which we have offered in the past. Our most recent purchase of data includes the 1st QTR 1996 FCC Data. No further updates of data will be forthcoming from ScanWare. We will continue to honor any outstanding free database certificates however data provided will be limited to the current database on hand. Any certificates sent in for redemption must be accompanied by a check or money order in the amount of $5.00 to cover media, preparation, and shipping. Credit card payment will not be acceptable. Technical support of all ScanWare products will be limited only to any answers or solutions which can be provided via email. Replacement files may be provided via email at ScanWare's discretion but we make no claims or guarantees as to their continued availability.

The ScanWare Associates BBS will cease all operations at midnight on August 31st, 1996. The ScanWare Associates Web Page at URL:
http://sincom.com/~scanware/index.html
and the ScanWare Associates email address: scanware@sincom.com
will continue operation until such time as we consider their usefulness at an end.

ScanWare Associates wishes to thank all of our customers and friends who have supported our efforts. We hope that you will continue to use the FCC FRS as you have in the past and that you will continue to remain our friends. Although we will no longer be retailing the FCC Frequency Retrieval System and its related products, ScanWare Associates as an entity will continue to exist and we will continue to pursue activites in those areas of most interest to us. Perhaps in

the future we will meet again.

Sincerely,

Gene McAvoy, KG7XD
and
Matt Amis, AA7LP

-- For immediate release --

FARFEST '96

The Foundation for Amateur Radio (FAR) will sponsor the 39th annual FARFEST amateur radio ham-fest and swap meet on Sunday, September 8, 1995, from 6:00 am until 3:00 pm at the Montgomery County Agricultural Center (Fairgrounds) in Gaithersburg, Maryland.

Over 100 commercial vendors and 1,000 freelance "tail-gaters" will offer a variety of amateur radio and other related equipment for sale to the public.

A display of antique radio equipment will be on view, and a Special Events amateur radio station will be on the air, making contacts with amateur radio operators, known as "hams," from around the world. The Special Events station will be using broadcast quality, amplitude modulation (AM) amateur radio equipment using the call sign W3PRL-AM.

Interested amateur radio operators can contact W3PRL-AM on either 3.870 MegaHertz (MHz), 75 meters shortwave; 1.950 MHz, 160 meters shortwave; 7.230 MHz, 40 meters shortwave, or; 14.230 MHz, 20-meters shortwave. W3PRL-AM operating times will be from Saturday, September 7 at 9:00 am EDT (1300 UTC) until Sunday, September 8 at 2:00 pm EDT (1800 UTC).

To get to FARFEST '96, take Maryland Interstate-270 to Exit 11 and follow the "HAMFEST" signs. Directions to FARFEST '96 will also be broadcast on amateur radio frequency 146.520 MHz.

Tickets for FARFEST '96 are $5.00 at the gate.

All proceeds go toward the more than 50 educational scholarships awarded annually by the Foundation for Amateur Radio.

i haven't researched it, but if it's like some other channelized HF i've dealt with, the first bit of the channel number also implies the band..so the first 2 digits would be 14. i would guess that channel 14001 would translate to 14.200 MHz, 14002 would be 14.203, etc.

There's no mod to allow storage of non-amateur frequencies -- unless you call buying the HTX-242 a mod! This is the new version of the 212; it's generally the same, with just a few minor updates (the ability to store non-amateur frequencies, for example). How to tell which is which in the dark? The backlight of the 212 is green -- the 242 is amber.

736. Family Radio Service -- a list of FAQ's

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-09 00:00:00 UTC
From: Joe Fitter BV/N0IAT <FITR%mimi@magic.itg.ti.com>
Message-ID: <320BD66A.2705@magic.itg.ti.com>
Source record: 219164
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,

Found these FAQ's. Whoever maintains the FAQ
of the rec.radio newsgroups might want to add these:

1. What is the Family Radio Service (FRS)?

FRS is a private, two-way, very short-distance voice communications service
for facilitating family and group activities [95.401(b)].

2. Where did FRS come from?

Tandy Corporation's Radio Shack division proposed FRS to the FCC in 1994. The
FCC authorized FRS May 15, 1996.

3. Is FRS "UHF CB"?

FRS is one of two Citizens Band Radio Services. The other is the Citizens Band
Radio Service at 27 MHz.

FRS is the real (and the only) "UHF CB" in the United States.

The General Mobile Radio Service (GMRS) is often mistakenly described as "UHF
CB".

GMRS was formerly Class A Citizens Radio, never Citizens Band.

4. What are the FRS channels?

Channel (MHz)

1. 462.5625
2. 462.5875
3. 462.6125
4. 462.6375
5. 462.6625
6. 462.6875
7. 462.7125
8. 467.5625
9. 467.5875
10. 467.6125
11. 467.6375
12. 467.6625
13. 467.6875
14. 467.7125

5. Do I need a license to operate an FRS unit?

No license will be issued. You are already allowed to operate an FRS unit if
you are not a representative of a foreign government, and if your authority

to operate an FRS unit has not been withdrawn by the FCC, and if you comply with all FRS rules in Part 95, Subpart B-Family Radio Service (FRS).

6. Is my FRS radio an unlicensed Part 15 "intentional radiator" like a cordless phone?

No. It is a radio station in the Citizens Band Radio Service, "authorized by rule" under the Communications Act.

Unlike Part 15 intentional radiators, FRS users are subject to operator rules.

FRS manufacturers are subject to FRS technical standards found in Part 95.

7. May I use my FRS radio for business communications?

The FCC does not limit the types of communications FRS may provide, as long as they are not contrary to federal, state or local law.

The only comment regarding business use of FRS made by the FCC is: "Small businesses...may be users of this service in their business activities." (Report and Order, WT Docket No. 95-102, at 20(D).

8. May I use my FRS radio to communicate with a station in the General Mobile Radio Service (GMRS)?

We interpret the GMRS and FRS rules to permit GMRS-FRS intercommunication. Others do not. The FCC has not issued any formal rule interpretations on the subject. We consider it unlikely that the FCC would take issue with GMRS and FRS users talking to each other.

GMRS licensees are not permitted, however, to transmit using anything but a FCC-certified FRS radio on the 467 MHz FRS channels 8 through 14.

You may not use your FRS radio to communicate through GMRS repeaters, or on any of the GMRS primary channels, or any channels not already built into your FCC-certified FRS radio.

9. Must I identify my FRS station or transmissions?

The FCC does not require you to identify your station or transmissions.

10. May I set my FRS radios up as a repeater station?

The FRS Rules do not expressly bar FRS repeaters. The FCC said only that repeaters are "inconsistent with the type of communications FRS is designed to satisfy" (Notice of Proposed Rule Making, Docket No. 95-102, at footnote 28).

You would have to set your radios up as a repeater station without connecting anything to the FRS radio that was not FCC-certified as part of the radio.

Repeater controllers, external receivers etc. are unlikely to be FCC-certified as part of the FRS radio and so could not be connected to it.

11. May I connect an external antenna or power amplifier to my FRS radio?

You may not attach any antenna, power amplifier, or other apparatus to an FRS unit that has not been FCC certified as part of that FRS unit [95.194(c)].

12. May I connect my FRS radio to the telephone?

No FRS unit may be interconnected to the public switched [telephone] network [95.193(c)].

13. May I broadcast music over my FRS radio?

You may only use FRS to conduct two-way voice communications with another person [95.193(a)]. Only these types of one-way communications are permitted [95.193(a)]:

* To establish communications with another person (to call them);

* To send an emergency message. The FCC defines an "emergency message" as "concerning the immediate protection of property or the safety of someone's life";

* To provide "traveler assistance":

* To make a voice page;

* To conduct a brief test.

14. May I use my FRS radio to transmit one-way paging messages?

Yes, but only voice paging messages [95.193(a)]. You may not transmit "tone-only" pages (a tone-only page consists of tones communicated in order to find, summon or notify someone).

15. May I use my FRS radio to transmit data communications?

The FRS radio may only transmit tones to make contact or continue voice communications with a particular FRS unit. [95.193(b)].

16. May I operate my FRS radio anywhere?

You may operate your FRS radio in the United States and certain locations specified by the FCC [95.192].

If you want to use FRS aboard a vessel or aircraft owned or operated by a U.S. citizen or company, you will need permission from the captain (see 95.192(a)(1)).

However, the captain may not have authority to give you permission (for example, if FAA regulations forbid it).

17. May I transmit continuously over my FRS radio?

You may transmit only as long as you are conducting two-way voice communications with another person or transmitting lawful one-way communications as listed in question 13.

18. Must I listen to the FRS channel before I transmit?

You must share the channel with other users [95.191(b)].

There is no meaningful way to share the channel with others unless you listen before transmitting and wait until the channel is available before you transmit.

To listen to the channel, you must disable any tone squelch or other feature that can keep you from hearing other users.

Also, you must at all times and on all FRS channels, give priority to emergency messages [95.193(d)].

You would not be able to do this if you didn't listen for emergency messages.

19. Doesn't my radio monitor the channel before transmitting?

This is unlikely. The FCC does not require that radios do this by themselves.

20. How much does a FRS radio cost?

FRS radios are not yet available. We expect them to cost $100-200.

21. When can I get FRS radios?

Radio Shack has stated it will have radios on the market for Christmas 1996 or in the first quarter 1997.

Far too clean for the landfill...Anyone interested in ancient computing gear (a vintage packet controller for use with your SX-28?)

TRS-80 III computer "48K RAM" w/dust cover, Floppy: Model III TRS DOS, Floppy: Sublogic T80-FS1 flight simulator, Floppy: Monty Plays Scrabble, TRS-80 Line Printer II w/dust cover.

Immaculate - looks like it spent the last 15 years under the dust cover. Computer boots up and games play, didnt try printer but it looks clean and even has a roll of paper and bracket gizmo of some sort.

cpomputer would also make a cool terrarium, aquarium, lamp, housing for your antenna tuner, etc.

$50 + shipping from 48603 (or trade for black wrinkle finish gear like arc-5, BC-221, TU-X-X, etc)

I have had the same problem at times. The news server goes down and
when the provider reboots all the groups get renumbered starting at 1.
That means Netscape thinks you have already read them until the number
get back up to where it was. The solution is to edit a file in the
NETSCAPE/NEWS directory called NEWS.RC (or some other name.RC). The end
of each line contains the numbers read (i.e. 1-200). Just change all
the last numbers to 1-2 and you'll be back in business.

Exactly! What about hospitals (where one goes to get healed supposedly) and their 5 kilowatt ERP pager antennas? I'm serious, I've seen the specs required by some hospitals here in Md for their paging network. Not to mention commercial pagers.

Like the new bogus stricter vehicle emmissions laws, if you don't meet EPA requirement you have to pay waiver penalty (in Maryland, $150 for 2 years).

Sounds like another money-grubbing scam from Washington.

Technically, out of band MODS *aren't* against the law. TRANSMITTING on a radio frequency for which you aren't licensed, or TRANSMITTING with non type accepted equipment outside the amateur bands is another thing, however.

Try my new Morse Code program, International Morse Code Processor
(IMCPW311.ZIP), at

http://www.simtel.net/simtel.net/win3/ham.html

Below are its major features:

Morse code tutor for Windows 3.1 & Windows 95. Excellent for learning and
maintaining one's Morse code skills. Has code speed of 3-50 wpm and a
character speed of 3-50 wpm for Farnsworth code. Includes comprehensive
help facility, main menu and popup menu, and eleven code practice
lessons. Fully customizable from the Options menu. Sound card not
required. Requires 692K of free hard disk.

Ah yes...
I see now...
Very Clearly as a matter of fact.
You wanted a suggestion for aradio that covers the aircraft frequencies
through 162 MHz.
Intellectually speaking, if I recall correctly, the aircraft frequencies
do not and have never extended thru 162MHz.
Now, If you would like to re-state your question to maybe,
Oh I don't know... let's try this:
Can anyone recommend an HT that covers the Air Band 110MHz - 137MHZ,
the 2M Amateur Band, and the VHF Public Service Band 150MHz - 173MHz.
Also, the HT should have the capability of being rugged and possibly wet-proof
and may even meet Mil-STD-810c for ruggedness.
I would also like the radio to be very portable and pocket-sized. A computer
interface capability would be nice as well as being able to operate directly
from 12Volts.
Then I imagine you would have received more viable answers.
But, considering your posts of the past and the way your question was asked
this time, and judging from your attitude in responding to other's posts.
I doubt you will get anything useful.
Good Luck.

Have an FT10 and FT40, used FT10 less than 1 hour since purchased at Dayton. I like the audio on both radios, features are great, out of band mod works great, and DPL works even better. I bought the FT10 because I bought the FT40 before Yaesu introduced the FT50, so I "needed" a VHF radio to go with the UHF. If your interested in Ham radio only, not stereo reception of FM stations, the price difference between an FT10 and a FT50 is something to look at very carefully.

In this thread there has been mentioned of the FCC study on this issue. A number of months ago I downloaded this " article " for work it prints out to be over 70 pages. We have nbeen looking at this issue for a while now casually. It was worth the time to download , lots of information was surprized to see how many typre of antennas the FCC used for testing and the tables and charts with test results included..
Download and print it today. Take a few nights to read and digest it.

Robert,

It may sound fun (when I was in college, we tried to do the same thing, but were unsuccessful, luckily.) If you do succeed, you WILL most likely be caught, unless you are in an area with almost no radio stations. As an assistant engineer at an FM station with several translators, we regularly monitor the band with a spectrum analyzer and would most likely find a 'pirate' station within a few days of it's debut. I'm sure you've read the posts from others outlining the fines.

Radio is an appealing hobby. I'm sure your intent is not to break the law. Why not go about it through the existing channels? If your desire is to communicate, try amateur radio, it's lots of fun! If your goal is to get your music 'on the air', seek out a local college or technical school radio station. I'm involved in both amateur radio and broadcast radio, a rewarding hobby and career. Good luck!

748. DXHUNTER: your score raises.

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-09 00:00:00 UTC
From: vmi@vmi.it
Message-ID: <4ufdbh$jb1@qualcuno.nettuno.it>
Source record: 219176

73s & TNX for reading this message.
The DXHUNTER 5.0, a new sw pack for DX CLUSTER users, is now a big reality; its target is to assist you in the DX activity, to raise up your score; this target is reached, you can bet it!
Previous releases were in italian language; the english version is now available.
Here is a list of the Internet sites where it can be found.
The name of the file is DXHUNT5E.ZIP, size about 1M.

english language:
http://www.coast.net/msdos/hamradio.html
http://www.simtel.net/simtel.net/msdos/hamradio.html
http://www.funet.fi/pub/ham/hf-work/
ftp://oak.oakland.edu/pub/hamradio/dos/ham-utils/

italian language:
http://www.alpcom.it/actis/hamradio/

Read the following lines, to get a summarized description of the prg.

*DXHUNTER is a DOS, shareware, freely distributable program for PC and TNC modem (note: no BAYCOM modem support), for DX CLUSTER users.
You can run DXHUNTER in a DOS session simultaneously with your favourite programs, such as your log: PIF and ICO files are included, to use the program under Windows, so you'll not have to abandon your dear old LOG program, when adopting DXHUNTER.

*Automatic DXCC data import from different log types (such as DXBASE, TOPLOG, EASYLOG...).

*Alert on New Ones: you can set an alert type and an alert duration; you can choose between 5 different new one classes to accept (cell, band, mode, band/mode, total). Allowed alert types are SOUND, MUSIC, CW and VOICE; the CW and VOICE alert types execute the spelling of the alerted spots (call and frequency) also on the PC speaker, making it possible to remotize alert events via radio.

*You can enable the announcement of any incoming spot, wich will be performed in CW or VOICE, by spelling spot's call and frequency, also on the PC speaker (useful for people who are blind).

*Some special features allow you to decide which alerts to accept, at a spot's CALL/FREQUENCY level; the band planning can be adjusted to your needs.

*Automatic connection/reconnection to the DX CLUSTER, also via an unlimited number of intermediate nodes: your presence is not needed,

even when the link drops.

*Antitimeout function, to avoid inactivity disconnections.

*A monitor mode function allows you to operate also when disconnected; a smart anti spot repetition function avoids identical spots display (this filter is active also when operating in connected mode, to avoid looped spots repetition). The monitor mode function supports also the special spot format used on forward links, between cluster nodes!.

*Incoming new ones are saved apart, on an active list: once you select an item from this list, you can play it (in CW or VOICE), you can send its frequency to your RTX via RS232; the spots that currently result to be more probable (because they were received into a one hour window centered on current z time) are displayed marked.

*DXPED and SKED reminder, with automatic deletion of expired events: when a DXPED becomes active a visual warn is displayed; when a SKED becomes active, a phone-like alert is executed.

*Prefix recognition without errors: the DXHUNTER is probably the best in the world in recognizing simple or slashed prefixes; if you keep the data base updated, by adding or deleting prefixes when needed, you'll get the best from this program. An on line prefix check function, allows you to check for any prefix with immediate response.

*Filter on far away originated spots: some DX CLUSTERS collect spots being originated from far away sites (i.e. spots coming via the Internet); very often the far away originated DXes are not feasible for you; if you want to exclude alerts on these spots, you can act on the originating field (DX de...) by filtering any originating country you want (unwanted spots will not be alerted but still displayed, anyway).

*Non std. IRQ support for any comm port, at any speed (up to 115200).

*Remote control on RTX via RS232 port. This control includes frequency and mode setting on the RTX; the control can be manual (you manually type in the desired frequency and mode) or fully automatic (linked to the last received spot or to the new one list).

*Voice keyer (Sound Blaster-like card needed): you can record up to 10 voice messages on the fly and then send them back with a snap, with PTT activation on a selected COM or LPT port.

*Audio loop recorder (Sound Blaster-like card needed): you can record up to 25/30 seconds of audio onto a circular RAM buffer (thus without disturbing your Hard Disk); you can keep your recording session working for unlimited time; at any time you'll be able to play back the last 25/30 seconds of the current recording, marking audio portions to relisten, with saving capability; you can also select a slower or faster playback speed (6 speed levels: very useful for CW relisten). A switch signal to redirect audio to headphones is

included.

*Text and audio file capture/storage functions (for audio features a Sound Blaster-like card is needed); a multimedia text/audio archiviation program is included; during the audio playback an hardware switch is activated, to redirect the audio to the headphones.

*Automatic CW Key (from 5 up to 100 WPM); you can simulate your CW key with very regular transmission with simple keystrokes or by recalling preset strings; the key switch is performed via a selected COM or LPT port, in a CT like standard.

*Unlimited and smart word search function; you can search for any word on entire DX spots, or just on their comment fields; you can also search for IOTA or LOCATOR strings in the comment fields; when a searched word is found, an alert is executed.

*RF disturb robustness: some programs block when RF disturbs the serial port; the DXHUNTER simply warns you that you're causing RF disturbs and you might loose data.

*Screen capacity selectable, up to 50 text lines.

*Automatic talk reply in NOHERE state: you can set a standard message that will be automatically sent as an answer to anybody attempting to talk to you, when you are in a NOHERE state.

*Save disk space option (when enabled, all the lists are kept limited in size).

*Night mode feature, with blank screen operation (the screen is restored when an alert occurs or at user's keystrokes).

*Minimum hardware requirements (the program runs on any PC, from 8088 up, also from floppy disk).

*Different acoustic signalling of DX spots, talks, or other messages.

*Self documented functions, with on line brief help comments in english language; a printable, justified and page formatted ASCII manual in english language is also included; the manual is schematic and complete at the same time; it has been divided into different sections for easier info retrieval (italian language program and manual also available upon request); the manual also includes some schemes to build the simple required interfaces (PTT, audio switch, RS232<>TTL to drive the RTX).

This, and much more, make the DXHUNTER a unique program.
Believe me, it will raise up your score dramatically.
Many big DXers (scores over 310) are currently using the DXHUNTER with success and satisfaction: they consider it an indispensible DX tool.

DOWNLOAD and test it NOW!!!.

Problems, advices, suggestions, bugs, tips and other, may be reported
to the following Radio Packet BBS Address: IK4VYX@I4UJB.IEMR.ITA.EU
(my name is Fabrizio), or to the following Telephone number:
+39 545 32916 after 19 UTC.

749. Free Electronic Filing of FCC Forms 610 For ARRL Members

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-09 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <320B33BF.704D@arrl.org>
Source record: 219177

ARRL News Release

August 8, 1996
For more information contact:

Bart J. Jahnke, KB9NM
ARRL/VEC Manager
Phone: 860-594-0300
(internet: vec@arrl.org)

ARRL/VEC to Offer Free Electronic Filing of FCC Forms 610 For ARRL Members

Effective immediately, the ARRL/VEC will electronically file with the FCC Forms 610 for ARRL
Members. The ARRL/VEC can electronically file FCC Form 610 applications for amateur station license renewals, or for address, name or call sign changes. This service is FREE to current
ARRL Members.

What is required to use this ARRL Member service?

ARRL Members must send a correctly-completed, signed and dated original Form 610 to the ARRL/VEC. Members can send the Form 610 by US mail, by courier, or hand deliver to: ARRL/VEC,
225 Main St, Newington CT 06111 (USA). Applications received by the ARRL/VEC must include an
original signature. Forms 610 cannot be accepted via fax.

Special Information Regarding Applications:

* Renewals (Box 4F): Only applications for renewal made on FCC Form 610 may presently be electronically submitted by VECs. For now, VECs cannot process computer-generated Forms 610-R
(which are mailed by the FCC directly to upcoming expirees)--those must go directly to the FCC
(also, VECs cannot presently process FCC Forms 610-A, 610-B, 610-R or 610-V). FCC Rules stipulate that renewals be submitted to them no earlier than 90 days before the license expiration date. Licenses that have been expired for less than two years may still be reinstated--a Form 610 for renewal must be submitted to a VEC or FCC before the two year grace
period has ended.

* Systematic Call Sign Changes (Box 4E): Applications submitted for a systematic call sign change must have Box 4E checked, and the applicant must initial the line adjacent to the box.

* Address Changes (Box 4D): Applications must include a current mailing address that is within
the United States or its Possessions/Territories (where mail can be delivered by the United States Postal Service).

* Name Changes (Box 4C): Applications submitted for a name change must include a copy of a legal document showing the formal name change. The former name must be written on the line next
to Box 4C. Typographical errors can be corrected using Form 610.

Any questions regarding Form 610 application processing for ARRL Members can be directed to the ARRL/VEC by calling 860-594-0300 (weekdays and evenings, from 8 am to 9 pm eastern time).

Yeh right, what planet are you from ? As somebody who has been through
many zoning restriction tower "battles" this whole EPA bull will be used
as just another tool to prevent us from putting up efficient antennas.
Been there done that. If I didnt have a decent tower now (which probably
is worthless with these new restrictions) I would NEVER go through the
hassles again.

Propagation Forecast Bulletin 33 ARLP033
From Tad Cook, KT7H
Seattle, WA August 9, 1996
To all radio amateurs

SB PROP ARL ARLP033
ARLP033 Propagation de KT7H

Solar activity declined this week from the week previous, but solar flux was above the average for the previous 90 days for the thirteenth day in a row. The current 90 day average has just risen from 70 to 71.

Solar flux is expected to go below 70 until August 22, and then peak around the mid-seventies again on August 28. The geomagnetic field is expected to stay stable over the month. 40 meters remains the best worldwide band at night, while 20 meters is most reliable during daylight hours.

W4VOS wrote a nice note pointing out an error in the text of ARLP031, which stated that there were sunspots visible on July 19, when it was really July 20 when we saw a sunspot count of 12. Also in the mail this week was a generous gift from W7EYE of the 1953 edition of The Sun, by Gerard Kuiper.

Sunspot Numbers for August 1 through 7 were 32, 34, 30, 29, 20, 13 and 26, with a mean of 26.3. 10.7 cm flux was 80.4, 79.6, 79.3, 77.6, 74.1, 73, and 71.6, with a mean of 76.5.

This week we have a special path projection from the United States for the Worked All Europe CW Contest this weekend.

From the East coast, check 80 meters from 0000z to 0600z, with signals peaking around 0230-0330z. 40 meters looks good from 2230z to 0730z, with strongest signals around 0030z to 0430z. 30 meters looks good from 2100z to 0330z and again from 0500z to 0630z and around 0900z. Strongest 30 meter signals should be from 2300z to 0300z. Check 20 meters from 1500z to 0130z, with the best bet from 2200z to 0030z. 15 meters may open around 1900z to 2100z.

From the mid-USA check 80 meters from 2230z to 1300z, with your best shot around 0130z-0300z. 40 meters should be open around the clock with the best period around 0100z and weakest signals around 0830z and again at 1800z. Check 30 meters from 1200z to 0430z, and 20 meters around 1430z-1530z and 2000z-2130z.

From the West coast check 80 meters from 0200z to 1100z, with best signals around 0400z-1000z. 40 meters should open from 0030z to 1300z, with strongest signals also around 0400z-1000z. 30 meters looks good from 1230z to 1600z and 2200z to 0600z, with strongest signals from 0200z to 0600z. Check 20 meters from 1430z to 0330z, with best conditions around 1700z to 2200z.

Just to summarize this situation, last Feb. 28th, Jon posted
a message that he would buy old Bearcat scanners (working or not).
I responded and he said he could only offer $20 each (sight unseen).
After a couple of e-mails, we decided that I should send them for
his evaluation as I felt they were worth more than that. I sent
them UPS on Apr 18th. After requesting my money each month for
3 months, I finally resorted to posting on this newsgroup to
beware of him.

He wrote me e-mail within a couple of days and said he had just
gotten back from a trip at sea and had just plain forgotten to
send me a check. He apologized both privately and publicly.
I think it was an honest mistake on his part. I also think I
waited a quite reasonable amount of time before getting nasty.
I think we should just chalk it up to circumstances.

I'm not going to wait until the check clears. It would not be
fair of me to drag it out any longer before posting this message.

So everybody please erase from your minds any bad thoughts about
Jon Van Allen.

By the way, the check was for $40.

73,

Jack VE3EED/W7

Message-ID: <wb6siv-0908960331100001@host50.cyberg8t.com>
Source record: 219187

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted.

Visit http://www.sarrio.com and participate in your first cybersched.

760. linked repeaters in Calif?

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-09 00:00:00 UTC
From: tgeyer@rain.org
Message-ID: <4ufq60$l5q@news.rain.org>
Source record: 219188

I'm interested in any open linked repeater systems in Calif. I don't have a 220 radio, so the CONDOR folks aren't willing to let me on. However, I have heard of the WALA and EDISON systems.
Does anybody know of a repeater listing for these systems? I've tried searching the internet and cannot find any info. Repeater call signs would help.

Tom

First, it seems to me when I was in Anaheim a month ago, the repeater had
a standard -600kHz offset albeit it's on an odd-ball frequency and doesn't
conform to the usual rules as to where plus or minus repeater frequency
offsets are customary. But then it's far from the only California
repeater with that characteristic.

Second, why doesn't the FCC not only shut the repeater down/zap the
trustee but also silence/punish all those who are engaging in illegal
activity on that machine?

There are guaranteed seats on the FCC for both parties. A northern
California woman from San Francisco made news here because she was
appointed to one of the guaranteed Republican seats.

Marv, you're as irritating as Burt when you email your responses.

As I told you, the Germans got credit for everything they used to kill
people. They got a raw deal because they didn't write history. Whoever
writes history, usually writes about themselves, not the other guy.

advance!

I have absolutely no complaints about mine. As far as the audio quality goes, other listeners say it sound fine (not muffled and not overmodulated). The built in speaker is loud enough for handheld use, but I have been using this as my mobile radio as well, and I have to use an external speaker to hear over road noise. I don't really consider this Icom's fault, more mine for using the radio in ways it wasn't designed for.
One nice/wierd thing about the radio is that it will let you tune to any frequency from 10MHz to 999.990MHz . It doesn't really recieve directly outside of the VHF band, but you can hear images of some other bands, like the 450MHz band, that show up when you tune around 300MHz. Once I figured out how to tune in specific frequencies, it turned out to be sort of a bonus. However, I have not heard any unwanted signals (beside imtermod) in the intended 144-148MHz band.
Let me know if you buy one and I'll send you a formula you can use to tune in the 450MHz band.

Subject: Re: article

Phillip,

Below is a text version of your article. Thanks for contributing
it to the Palmtop Paper.

Rich Hall

*** Article begins here ***

*Using the HP Palmtop
with a Ham Radio

This user connects his Palmtop
to other computer systems via a Ham Radio.

By Phillip Nichols

About the author: Phillip has been interested in computers since he purchased his first computer, a Commodore Vic-20. He spent his Junior year in High School as a teacher's assistant in his school's first computer class. Since then, he has used his personal, palmtop, and amateur radio skills to help others, spiritually and otherwise.

Recently my notebook PC took a trip to the doctor; maybe it was a vacation since it was gone for almost two months. My computing was done solely on my HP 200LX. It so happens that at about the same time I received my FCC license for Amateur (Ham) Radio. (I had the urge to try Ham Radio, studied from scratch, aced the test, and waited around for the license).

All right! My license came in (KC8DQF)! Now I could "boldly go where no-one has gone before...," or at least where I'd never gone. I immediately wondered if I could tie my Palmtop into the radio for wireless work. I read about something called "Packet-Radio" -- a way of connecting computer systems and networks by means of Ham radio. Then I saw an ad for a "packet modem" that plugs into a computer to convert it to a TNC. A "Terminal Node Controller" is what Ham operators connect to their radio for the digital/analog conversion of the computer data as well as for providing error

correction protocol called AX.25.

You need the right stuff

The packet modem was the BP modem by Tigertronics (1-800-8-BAYPAC). It comes with special communications software and the modem (a small 2-inch-square custom analog/digital modem based on the old Bell-202 standard). The BP draws 9ma of power directly from the serial port of the computer. No external power supply for the modem is needed with a standard PC. The general advice with a Palmtop is to use an AC adapter when connected to a modem. However, I find that the BP modem does not significantly reduce battery life and don't bother with the adapter.

The final piece of hardware in this setup is the actual radio transmitter/receiver (a RadioShack HTX-202 Transceiver). I prefer this radio because it does not allow Wide receive 108-174Mhz. What this means is that it is less bothered by what is called "Intermod" or interference from ghost signals "mixing" with Ham signals. This is important in choice of radios for this type of work. Now the question was: "Can I hook all this up to my HP Palmtop?"

Getting it all to work
with the Palmtop

Sure enough! I fiddled around and got it all to work, and then discovered that someone on the web has done the same thing with the exact same equipment (minus the antenna). So now there were at least two of us using the same Palmtop/packet radio combination. Now I could really send and receive "airmail." Although I use this system mostly at home from a desktop PC, the fact that it works with the Palmtop means that I can logon anywhere. Even from inside a shopping mall or at work.

I physically connect my Palmtop to my wireless transceiver using my packet modem. Previously I have loaded the necessary software drivers on the Palmtop so that it can communicate with the modem. I start the Packet radio communications software on my Palmtop and type "connect" followed by the call letters of the person I want to communicate with. It's that simple.

Each packet radio area will probably have many PBBS's (Packet Bulletin Board Systems) running a newer communications protocol known as JNOS. This protocol is similar to an Internet TCP/IP protocol in that it lets you communicate with packet radio addresses that are not in your immediate area.

Once you establish connection, you get a menu just like a normal BBS menu. There are up to 30 commands you can access, so there is a lot you can do depending on what BBS you connect to. As with Internet, Packet BBSs let you "telnet" (link) to other sites in neighboring counties or states. You can even send files by radio, although 1200 bps is a bit slow.

Another user's story

Jason Baack of Maine, the other person I mentioned that uses this setup, told me how he got started.

"I was first introduced to packet radio two years ago on Rainbow Lake in northern Maine (U.S.A.). The total permanent population for the area was listed as four, living in a township called 'T2R11.' There were no roads into the lake, (you had to fly). Three 1.5K generators provided power during the daylight hours, so I was able to use my ancient Packard Bell 286. I got my Ham operators license while I was up there, got a wave antenna and other necessary equipment, and had a blast the rest of the summer connecting to DX nodes, the far reaches of Canada, Nova Scotia, and talking 'keyboard-to-keyboard' to some local (20 miles away)."

Jason (call sign N1RWY) has plans to contact the Mir space station someday from a nearby mountain, while I, though no less adventurous, am stuck in the flatlands of Michigan. I am planning to operate a land-mobile packet station while I ride on vacation trips this summer and also would like to find a pilot at a nearby small airport willing to try a little air mobile to see how far I can QSO (Amateur Radio communication on the air) with another station.

As it is now I can hit a packet Bulletin Board Service near me and get mail, topical groups, and telnet to other stations that may otherwise be out of my power range. There is even a World Wide Web/IRC-style conferencing area called CONVers for communication with other "packeteers" around the United States. And finally there are Gateways that tap directly into the Internet to speed things up.

Amateur Radio:
A hobby that's fun and helpful

Amateur Radio operators and clubs perform services by providing communications in times of disaster (both natural and man-made) and sending messages from non-hams to people around the globe that they may have lost contact with! Ham operators seem very interested in helping both the ham and non-ham. One fellow ham gave me an old receiver to help me improve my Morse-code abilities so I could communicate over world-wide frequencies. He also gave me 26 back issues of QST, a relevant Amateur Radio magazine. Another Ham is going to help me improve my antenna.

[Note: QST is a publication of the Amateur Radio Relay League (ARRL). Call 1-800-326-3942 for information on becoming a Ham operator as well as joining ARRL. Membership includes the monthly QST magazine. They also have a NEW-HAM kit, which they'll give you free of charge (no membership required). It's their way of introducing you to their services and getting you started in ham radio. I also received an offer to receive a free Ham-related book.

I chose Hints and Kinks from the list of titles. It contained a lot of little fix-it tidbits good for new Hams to know before hand, like how to mount your first antenna on your car without destroying your car in the process.]

Amateur Radio Clubs also get together monthly and have special activities for both fun, as well as some that help emergency preparedness for the community. An example is the Amateur Radio SkyWarn system that tracks severe weather and reports it to local weather services. In Ontario, Canada; I have met some who chase and report on storms as well.

Amateur Radio provides you with the opportunity to experiment and challenge your own personal limits. In addition, it lets you give something back to your community. I definitely stretched my Palmtop's capabilities, but there's more room to grow. With my HP Palmtop I can run satellite tracking programs to locate Amateur radio relay satellites in "real time" using REAL95.ZIP <contact info at end of article>. I have another TSR program I run while on packet that can help locate and calculate the distance between myself and the ham on the other end (GRID.ZIP <contact info at end of article>). I have modified a Palmtop-database for keeping a log of my contacts (ARS-LOG.ZIP <contact info at end of article>).

You can investigate ham-related topics by contacting a SIMTEL site on the Internet. Most have an amateur-radio and packet directory listing topics of interest. One such SIMTEL site containing about 100 topical directories is:

http://oak.oakland.edu/simtel.net/msdos/index-msdos.html

Another non-SIMTEL, but more ham-specific site is:

http://www.cdrom.com/pub/hamradio/oak

The more I look, the more people I find using their Palmtop with radio. We hope to "QSO with you on 2meters (144-148Mhz)" sometime, or else exchange some packet e-mail! So how about getting your license? It's now easier than ever to get started, you don't even need to learn Morse-code to begin (but you'll earn more respect if you do). You have nothing to lose, and world of ham operators to gain.

For more information visit Jason's web site at:

http://www.umecut.maine.edu/~baack

or Ham-Radio On-line at:

http://www.accessone.com/~vbook/hronline.htm

Packet radio networks

Ham operators designed their own "Network" of computers back in the late 70s. The Canadian Department of Commerce legalized Packet Radio by ham operators in 1978. Then the TAPR '80 (Tucson Amateur Packet Radio corporation) began developing radio communication protocols. 1981 TAPR decided to use a version of the computer industries x.25 communications protocol, calling it AX.25 ("A" for amateur radio). Packet radio communications started with a few people who could afford computers and to modify Bell-202 modems with the TAPR chip protocol.

Soon computer prices fell and Terminal Node Controller kits were becoming more available. Radio networks were being set up much like a unix "on/off LAN" and businesses "constant-on LAN." An example of an "on/off LAN" is an Internet web browser, that is not actually connected to the web site all the time, but intermittently connects to ("pings") the web site for information. A computer bulletin board system like CompuServe is an example of a "constant-on LAN" because it is always connected to the net and to other nodes in its system.

Pricing and Contact Information for products mentioned in this article

All prices are manufacturer's suggested retail price. It may be possible to purchase the product for less at third-party vendors.

BP Modems
Model 2 -- $49.95
Model 2M -- $69.95

Shareware/freeware
mentioned in this article

HAMRADIO.ZIP -- available on the July/August 1996 issue of the HP Palmtop Paper ON DISK and includes the following three pieces of software:

REAL95.ZIP -- Executable satellite tracker intended for use on the Palmtop. Freeware. Also available on the Internet at : ftp://eddie.mit.edu/pub/951x/NEW/

GRID.ZIP -- Amateur radio executable and documentation files. Shareware. Contact: David Eanes, 4866 Drusilla Lane, Baton Rouge, LA 70809,U.S.A.

ARS-LOG.ZIP -- Database template for the Palmtop for logging radio contacts. Freeware.

GEOCLK40.zip -- Graphical display of sun/moon for grey line propagation
GEOMNO44.zip -- converts EGA version to CGA, customize cities to display contact points by entering lat/long of gridsquares and label

with state name or grid square worked.

All software mentioned can be found by ftp at
eddie.mit.edu/pub/hp95lx/NEW

>>|Look/listen around.

>>|Andy

I think the idea in so far as enforceability is concerned is so the powers-that-be can have one more thing to hang over your head just in case you do something to displease them.

I am not completely prepared to debate this, nor do I think this is the proper forum(s) to do so in, but I have come to the conclusion that the government has decided that the normal legal / legislative process has become ineffective in dealing with the issues (read: percieved *threats*)

Our politicians spend so much time preening and posturing before the American people, rather than dealing with substantiative issues, that the entire political process has become more of a circus side show, than an exercise in effective government. I am not altogether convinced that the people we elect to office are even qualified to understand the issues, much less deal with them.

So they sidestep the whole issue by creating a multitude of agencies with administrative (read dictatorial) authority over just about every aspect of our lives. These agencies rule by fiat, and in many cases are not accountable to anybody. (Canonical example: The I.R.S.) There are so many rules and regulations, so haphazardly written, and in some cases, mutually contradictory, that I suspect that no matter what you do, you are going to be in violation or one or more. Period. This sets the stage for selective enforcement, which means that if you attract thier (agency) attention, you get stomped on.

This flap over environmental impact statements is just another example of a government spinning wildly out of control.

Unfortunately, I am not a politician, just a humble electronics enthusiast, so what can I do?

From: greg@virginia.edu
Message-ID: <greg-100896032907@ara-mac-220.itc.virginia.edu>
Source record: 219127

Hello All:

I have a Yaesu FT-411E, and the darned NiCd battery is still going
strong after 3 years. However, I want to get one of these new-technology
batteries. Does anyone have any suggestions ?
I am familiar w/ computer batteries. Surely HT batteries have
progressed from the NiCd stage. But, can my old 411E handle the new
technology?

OK, so, E-mail replies are appreciated <mailto:greg@virginia.edu>.

:>skip window on 10m from CA to UT, NM and later in the day to WA.
:>Several stations were calling out 10-10 numbers. Could someone tell me
:>what that's all about???

It would be a lot easier if you check out the 10-10 International Web page Scott. History, purpose, new member app, contest info, awards, and just about anything else you might want to know about it is all there.

The URL is http://www.lehigh.edu/lists/tenten-l/

Note that on the "tenten-l" it is a lower case "L" and not the number "one". Also don't forget the " / " on the end.

As Jim pointed out this is the bottom of the cycle and the long skip is hard to come by on 10 now but the shorter E-skip has been very good but very unpredictable. The band might die out for days at a time or open to who knows where for many days in a row. Enjoy and good luck.

>of the rec.radio newsgroups might want to add these.

Thanks for posting the FAQ Joe, although I would have
appreciated credit for writing it ;-)

By the way, the Family Radio Service is as of a few
days ago, no longer the only UHF radio service in the
CB category (see FAQ question #3).

There is a new one: the Low Power Radio Service (LPRS).
The LPRS may only be used for these 4 purposes:

1. Tracking of stolen goods (this is technically called
Law Enforcement Tracking Systems or LETS),

2. Auditory Assistance (transmitting classroom instruction
or church services, for example, to headsets worn by the
hearing-impaired).

3. Health Care Assistance (medical telemetry)

4. Control stations in maritime radio.

No other uses are allowed. No CB style ragchewing is
allowed. The chances of an ordinary person even getting
their hands on a LPRS radio are minimal - they won't be
sold at your local Radio Shack.

Nevertheless, LPRS is officially a form of CB Radio in
the U.S. There is no doubt about it. LPRS operates with
100 mW at 216-217 MHz. No licenses are issued.

Best 73s de David / 4Z5DK

Hi David, Here is some DX Packet Cluster info from KA9FOX's excellent page:

DX PacketClusters accessible via Internet

To use these links, you will need to have a TELNET application associated with your browser.

KI8W-6 Cluster
IK5PWJ-6 Cluster
N8BJQ Cluster
K9FN Cluster
WD5B Cluster
VE3CDX Cluster
WB9DFD Cluster
KS9K-7 Cluster
NO4J Cluster
F6CNB-6 Cluster
KA9FOX URL is:

http://www.qth.com/KA9FOX/links.shtml

Also check out the OH2BUA Page at:

http://www.clinet.fi/~jukka/webcluster.html

Here is a snip from OH2BUA's page:

"DX-Spots and WWV-information from PacketClusters. Check the World Desk with input form!

World Desk with 3 WWV's, 15 DX-Spots, 3 Announcements and INPUT FORM
Last 25 or 250 or 1000 DX-Spots
Last 25 or 250 or 1000 Announcements
Last 25 or 250 or 1000 WWV-Infos
1.8MHz , 3.5MHz , 7MHz , 10MHz , 14MHz , 18MHz , 21MHz , 24MHz ,28MHz 50MHz , 144MHz , 430MHz , 1.2GHz , 10GHz Beacon , Digital , IOTA , QRP , Satellite.

Hope this helps

Hi Bette, you can get your desired info at URL:
http://www.arrl.org/

Then click on the following:

How to Get Started in Ham Radio: EEK -- Your journey of ten thousand
frequencies starts here.

Then for exams in your area click on exams or goto URL:

http://www.arrl.org/exams.html

Should give all the info you will need.

BTW: We have a young persons net here in San Diego, ages 12 - 17,
about a dozen or so are involved. So Hams are really glad to see the
young folks enter the hobby.

Good Luck from San Diego.
Please E-Mail if I can be of further assistance.

I don't have the TH-22 but but I have its 440 MHz twin, the TH-42. I love
it. Good operational features, great size, solid feel. I've had it over
two years and it has performed perfectly. The audio qulaity is good and
the output is sufficient for my normal use which is as an HT, *NOT* as a
substitute for a real mobile rig.

(*****
The following is a QST

The FCC preempts all restrictions on television reception antennas and it could be good news for ham radio. This story and more on Newsline report number 991 coming your way right now!

(*****
FCC PREEMPTS LOCAL ANTENNA REGULATIONS

The FCC has adopted rules to prevent local governments from restricting the rights of homeowners and businesses to install television antennas and satellite dishes. These new regulations could also stop municipalities from restricting most two-way radio antenna systems, including those of licensed radio amateurs.
The new rules were enacted on Tuesday August 6th and prohibit the enforcement of local laws, rules, private covenants and homeowner association regulations that in any way interfere with television

reception. This includes over the air broadcast stations, satellite delivered services and microwave delivered wireless cable systems.
Enactment of these far reaching regulations is based on a regulatory interpretation issued earlier this year. At that time the commission acted to prevent any and all entities from restricting the installation of the popular pizza sized direct to consumer pay television systems.
Broadcasters and other RF based delivery services that compete with cable systems claimed that regulations governing antennas for their services made interference free delivery difficult. As a result broadcasters saw the satellite television gaining an unfair advantage and began pushing for a similar exemption. The result is the across the board action that bans restrictions on all over the air television delivery services.
The new regulations do grant communities some leeway in interpretation. For instance, communities can still enforce local safety rules even if such regulations hinder reception. This includes banning the installation of antennas on fire escapes.
Antennas can also be restricted in regions that are considered to be historical districts but do not cover the installation of antennas on common property found in many planned communities. Also excluded is the placement of antennas on rental property, but the FCC says that it wants to receive comments on rules that could be enacted to protect those involved in rental situations.
Don't look for any immediate help to ham radio. The action covers only antennas and satellite dishes specifically intended for the reception of television signals. But it does open the door for FCC action on a similar request by the two-way radio industry. The two-way folks filed a request to the FCC late last year asking the commission to ban any and all local restrictions on communications antennas. If the FCC decides to invoke extended preemption for the two way radio industry, it may not be impossible for restrictions to be selectively enforced against the nations Amateur Radio community. Stay tuned, this is just the beginning.

(*****
NEW HAM RADIO RF SAFETY STANDARDS

New FCC RF safety standards effective January 1, 1997, could affect the way some hams operate, including those using vehicle-mounted antennas.
The changes to ham radio are far reaching and come in the wake of a Report and Order on RF safety adopted by the FCC on August 1. As a result, the Part 97 Amateur Service rules will now require hams running more than 50 W PEP to conduct routine RF radiation evaluations. This, to determine if RF fields are sufficient to cause human exposure to RF radiation levels in excess of those specified. Where routine evaluation indicates that the RF radiation could be in excess of the limits, hams will be forced by law to take action to immediately remedy the situation. According to the FCC, this could mean altering operating patterns, relocating the antenna, revising the station's technical parameters and other remedies.
Exactly what is involved in conducting a 'routine RF radiation evaluation' is not yet clear. These guidelines will have to be established by the FCC. Speculation is that they could be as simple as field measurements with some form of RF sniffer to as complicated as a full blown

environmental impact study. Nobody knows for sure.
The ARRL says that it is now studying the 100 plus page docket, to see if the League should seek reconsideration of any aspects of the FCC decision. Executive Vice President Dave Sumner, K1ZZ notes that the FCC expects it will not be difficult for most amateur stations to show that the specified limits will be met.
Sumner says that for high-power mobile operation and for operation with indoor antennas, particularly in apartment buildings and other situations where there is ''uncontrolled exposure'' to neighbors and the general public, ''amateurs may well have to make changes in how they operate.''
K1ZZ says the ARRL Lab staff and the RF Safety Committee will be evaluating the new requirements.
The new regulations also will require the addition of five questions on RF environmental safety be added to the amateur examinations for Novice, Technician, and General class. Sumner notes that the Commission's Report and Order does not take into account the practical problems associated with such a significant revision to the volunteer administered amateur examinations, and that more time than the Commission has allowed will be required to do a good job.
This is obviously a developing story. We will have more in future Newsline reports.

(*****
KEENEY TO COMMISSION

Still with FCC news, word that the lady who used to run the commissions Wireless Telecommunications Bureau may soon be an FCC commissioner. President Clinton has announced his intention to nominate Regina Keeney to a seat on the five member Commission.
Keeney is currently serving as the Chief of the FCC's Common Carrier Bureau. Here she has lead the commissions implementation of the 1996 Telecommunications Reform Act. Before joining the FCC, Regina Keeney served as the Senior Republican Counsel for Communications to the Senate Commerce Committee. A graduate of Georgetown University, Keeney practiced communications law before taking on her senate duties.

(*****
TWA FLIGHT 800 HAM RADIO EPILOGUE

Amateur Radio operations are expected to continue indefinitely to support recovery efforts in the wake of the TWA Flight 800 disaster off the Long Island, New York, shoreline. This, according to Mario Maltese, WF2T, of the Amateur Radio Emergency Service. Maltese told the ARRL Letter that the New York City Red Cross requested communication to Suffolk, which was arranged on UHF, linking Nassau and Suffolk counties and New York City. A call also went out to Sid Wolen, K2LJH, of Azden in New Hyde Park, New York, to supply additional radios, which the company was able to do.
As the situation developed, the Red Cross mission became to feed the 2000 to 3000 rescue workers at the crash site and to provide mental health support for the workers and the victims' families. The local telephone company donated cell phones, but WF2T reports that these initially were

useless. With 3000 rescue workers and thousands of members of the press severely overloading the local cellular sites.
Ham radio did work. WF2T says that ARES provided vital communications links between the American Red Cross Headquarters in New York, the lead Red Cross official at the site, and the Red Cross official at the morgue. This was expanded later with shadows for other officials. Late word is that hams remain on call in the wake of this second worst ever United States air disaster.

(*****
PHONY DISTRESS CALL SEARCH ENDS

The U.S. Coast Guard all but called off an ocean search that began on July 17th for a possible downed airplane off Ensenada. According to Coast Guard spokeswoman Lt. Lisa Blow, there is a distinct possibility that it's a hoax.
The search started when unidentified ham radio operators from Alabama, Texas and Massachusetts reported hearing distress calls from an airplane. The pilot reportedly spoke English, but the aircraft tail number he provided was of Mexican registry.
According to news reports in Los Angeles, a Coast Guard helicopter searched a 2,500 square mile area off the Mexican coast but stopped after no overdue aircraft had been reported to Mexican aviation authorities or United States FAA.

(*****
SALINA KS MURDER FOLLOW-UP

Police in Salina Kansas say that Delores Mc Kim, the widow of Jim Mc Kim, W0CY, her daughter and grandchild were the victims of severe trauma, indicating that all three were beaten to death. This, by one or more intruders that apparently were invited into the Mc Kim home.
Initial police reports indicated that there were signs of forced entry to the house, but further investigation shows this less likely. Police also say that two empty purses have been recovered along with Mrs Mc Kim's red Oldsmobile. This indicates that robbery was probably the motive behind the crime.
Salina police have set up a toll free number for public help in the investigation. If you have any information, please call 1 800 K S CRIME.

(*****
AM EXPANSION PROBLEMS

The expansion of the AM broadcast band may again be in trouble. The trade publication Radio World reports in its August 7th edition that eight petitions for reconsideration have followed the release last March of an announcement by the FCC naming AM stations that will be permitted to move to the expanded broadcast band. The FCC must now resolve all of these petitions before the allotment plan can be called final.

(*****
WIRED SCHOOLS VA HAM RADIO

Amateur Radio may soon have an even harder time getting special education programs geared to the hobby started in the nations schools. This, after cable television executives announced plans today to offer elementary and secondary schools in the United States free, high-speed equipment to link to them to the internet and world wide web.
Fifteen cable companies pledged to provide 3,000 schools in 60 communities with the Internet connections in the coming twelve months. This, as part of a new industry-wide program that aims to eventually hook up all elementary and secondary schools in the United States. National Cable Television Association president Decker Anstrom, told the nations press that the goal is to wire as many of the nation's 95,000 private and public elementary and secondary schools as soon as is possible. Once the schools are wired, it will be interesting to see if educators are willing to continue training in ham radio or if it will all go to the web and internet domain.

(*****
TEXAS ATV FORUM

Twenty four registered attendees showed up at the First Texas ATV conference. Presenters included Bill Potter, N5MBM, Fred Juch, N5JXO, Henry Ruh, KB9FO, and several others. The gathering was sponsored by the Houston Amateur Television Society, Inc.

(*****
COLLOQUIUM '96

And this years Amsat-UK Colloquium at the University of Surrey was attended by 92 people from five continents. The big news reported was the fact that Phase 3D is almost certain to fly on the Ariane 502 as early as mid February 1997. Phase 3D is not insured. As such, this flight worries several people. Professional opinion is that the Ariane 502 flight has to be successful if the European Space Agency is to retain credibility in the launch business.

(*****
ARRL HONORED FOR SAREX

The American Radio Relay League has been honored for its role in the Shuttle Amateur Radio Experiment or SAREX program. The League was recently named one of 43 American Society of Association Executives ''Award of Excellence'' winners. The society presents the annual awards to associations whose work best exemplifies the leadership role of associations in creating a positive business and social climate.
Educational Activities Manager Rosalie White, WA1STO, submitted an entry earlier this year on behalf of the League. Award of Excellence winners were recognized at an August 11th ceremony in Boston.
By the way, the present "waiting time" for a school to have a SAREX scheduled contact now averages one to two years.

(*****
SAREX NAME CHANGE

What happens to the Shuttle Amateur Radio Experiment when the U.S. starts to use other space platforms than the Shuttle? Consideration is being given to replacing the word "Shuttle" with "Space"; this would, of course, retain the present acronym SAREX.

(*****
SEDSAT UPDATE

And the Marshall Space Flight Center's Small Expendable Deployer System will not be a part of the SEDSAT mission on STS 85 slated for launch on July 17, 1997. This is a result of difficulties the Marshall Center was having in assuring the safety of the Shuttle due to the tether during the deployment.
The SEDSAT Project Team hopes to the launch on the STS 85 shuttle flight.

(*****
SAT BAND PROTECTION

From overseas, word that Region One of the International Amateur Radio Union is extending its Monitoring Service to protect the satellite bands as well as HF. In Europe, terrestrial interference to satellite operations it is a big problem in some countries. For example, signals from alleged Spanish taxi communications in the 2 meter band frequently block satellite uplinks. While the problem exists outside Region the other regions have not yet made the commitment to support IARU Monitoring Service.

(*****
SPACE STATION

Also, plans for the International Space Station include digital, sstv and atv modes as well as the traditional transponder FM, SSB and CW modes. Likely bands are 21 to 28 MHZ on ssb as well as 144, 435 and 1260 MHZ. It is anticipated that all operations will utilize external antennas installed during a space-walk.

(*****
GB2RS SCRIPTS

And the Radio Society of Great Britain's GB2RS scripts, including the regional news bulletins, are now available on the RSGB Headquarters Home Pages on the Internet. The pages were officially launched on July 1st. The address is:

http://www.rsgb.org.

SEANET WORLD WIDE DX CONTEST 1996

From the contest calender, the Madras Amateur Radio Society is inviting
world wide participation in this year's "SEANET 96" contest. This, to
publicize the 24th. Annual Seanet Convention in Madras, South India, on
November 22nd to the 24th,

(*****
WORLDS TALLEST BROADCAST TOWER

A mountaintop just east of the Duke City is the new home of the nations
tallest broadcast transmission tower. The trade publication Television
Broadcast News reports in its July issue that Andrew Corporation has
completed installation of the new structure for Albuquerque, New Mexico
stations KRQE and KASY. Located atop Sandia Crest, the tip of the new
tower stands 10,849 feet above sea level and provides excellent coverage as
far away as Los Alamos and Santa Fe.
This is no ordinary tower either. According to Andrew, the structure is
designed to support eight inches of ice on every one of its components
simultaneously at 70 lb per square foot of wind pressure.
All of this makes us wonder how long it will be before hams at the
station decide to put up the highest repeater in the United States.

Dan,

I dont have anything in writing, someone faxed me a diagram. All I can remember is that you remove the keypad by unscrewing the screw underneath the Nicad label on back of radio. Then, on the board under the keypad, main radio board, not keypad board, is a few very small chip 0 ohm resistors. One of them must be removed, and a radio reset performed. Can't help on which one.
Tom

Source record: 219057

Hello Again

First, i would like to thank thoses who have replied to my letter Malicious Interference. second I would like to point somethings out. First WB9YHQ is the control operator/station licensee of the 146.955 Me and him both agree that he should be the one to say there is "interference" Second I have written the Federal Communication Commission (FCC) back in febuary. the Law Enforecment Division sent it to the Compliance and Information Bureau in Chicago who in term sent it to the Amateur Auxiliary Representative and stating in their letter to me that the letter was sent to them by the Wireless Bureau, concerning the possible abuses in the amateur service. Finally all this started when i got exempted for my general licenses. the ones complaing about it was the same one s about the repeater and packet. but that is what started all...and it is also neat that one of those complaining about my liceses is a also a VE. but thinks all for your comments

12 August 1996

Hello All,

This is some updated information on Peter, 3D2PI's activities, and QSL Info.

Peter (VK2ZPH) is currently Maritime Mobile in the South Pacific, aboard the Island Mercy using his Fiji call 3D2PI. The ship is currently in Vanuatu, where it will stay until it sets sail for Newcastle, NSW, Australia, to arrive on 25 August.

The Island Mercy is a 1000 tonne, 150ft hospital and missionary ship pperated by Mercy Ships, which is the marine wing of Youth With a Mission (YWAM).

Equipment includes an ICOM HF base/mobile transceiver, tuner, and an "inverted V" antenna suspended from the rear mast. Peter also has a Yaesu FT-23R 2m handheld which will be used while near land (including the VK4 & VK2 on the way home).

The schedule is as follows:

Times : 0100 UTC and 1030 UTC (11:00am and 8:30pm Eastern Australian Time).

Frequencies (kHz): 80m 3605, 3612
40m 7050 Primary frequency
20m 14200
15m 21200

All +/- QRM.

Communication will first be attempted on 40m. Should contact not be made, 20 and 15m will be tried in that order. 80m is being abandoned for the time being.

This weekend Peter also made skeds at 0500 UTC, and this may continue on future weekends.

Peter's QSL Manager is Simon Clowes.

QSL cards should be sent to:

3D2PI c/- VK2WLM
133 Taylor St
Glen Innes NSW 2370
AUSTRALIA

Also see my Web page: "http://godzilla.zeta.org.au/~julian" which includes link to other info on the ships.

Thanks,
Julian.

814. A new DX award

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-11 00:00:00 UTC
From: Burt Fisher <k1oik@ccsnet.com>
Message-ID: <320DB736.14CF@ccsnet.com>
Source record: 219060

This is a bulletin on behalf of the Societe Ancient Telegraphers Intentional Reducio Extremis (SATIRE), one of the world's smallest and slowest growing amateur radio operating awards organization. The group hereby annouces a brand new certificate : the WORKS ONLY DX (WODX) AWARD. (hates Americans).

This is an on-your-honor award; no QSLs are required. If you qualify in your own mind , you get the award without needing to submit proof. This is a NO FEE award. To receive your certificate, simply copy the certificate below to file, then edit the file to include your callsign, check any special endorsements, and then print out and post it in your shack.

Certificate:

"SOCIETE ANCIENT TELEGRAPHERS INTENTIONAL REDUCIO EXTREMIS"

-- WORKS ONLY DX AWARD --

In recognition of an extraordinary operating accomplishment, amateur radio operator _____ is hereby awarded the prestigeous Works Only DX Award, based upon the fact that said operator limits his contacts to DX STATIONS ONLY, and has not, within the past 6 months, had any on-the-air conversation (either by CW, phone or other operating mode) with any other operator residing in his own country.

In addition to denying himself the pleasure of chatting with his fellow countrymen (in dedication to his single-minded pursuit of rare DX contacts), said operator has achieved further distinctions. The following special endorsements to this certificate also apply:

( ) Works only stations from countries from which he has not already received a QSL card.

( ) Devotes at least 6 hours each day to monitoring packet cluster spots

( ) Exchanges only minimal information, to avoid unnecessarily prolonging contacts and learning what real people are like.

( ) Abruptly terminates any domestic contact which may have been erronously made during the heated pursuit of DX for fear of actually getting too personal.

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and is being resurrected
now on the WWW for currency and convenience.

Ham Radio.FAQ contains 3 chapters and many, many links to radio
related sites!

Chapter 1 - Introduction to the Ham Radio.FAQ
Chapter 2 - Amateur Radio Organizations, Services, and Data Sources
Chapter 3 - Amateur Radio Advanced and Technical Questions

Please scan the file. Know of links that should be added? Info that
should be corrected? Let me know! All help is welcomed!

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams
that you know or share with them the URL to this site:

It is in the TRW parking lot at the North West corner of
Aviation Av and Marine Av in the City of Manhattan Beach. Or you could
say it is in the
1800 block of Marine Av. The border between Manhattan And Redondo is
Aviation Av.

824. This one is just for you Burt

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-11 00:00:00 UTC
From: n5ejs@linknet.net
Message-ID: <8b7cc$829b.2cf@NEWS>
Source record: 219070

The last paragraph is just for you Burt, it came from WD1V's Web page. Now I'm sure that you can spit out some of those one-liners that you have been practicing on for your students this year. But it seems to me that you are starting to react to ALL people who post here as though they were from your SPECIAL group of snotty-nosed disrespectful kids that you will always get every year.

If you respond to ALL post in this manner, even the well thought out ones with good subject material, how can you expect ANY of your points or comments to be taken with anything other then the delete key? This applies to your class room also.

If you want good relevant discussion, you have to pour a little water in the pot so the bottom doesn't burn thus ruining the whole meal inside. But don't expect to get clams out of the pot when you only put in rotten potatoes. I guess you could look at it another way too. Just because you have a pot of boiling water, don't expect everyone to come running up with clams to toss in it. If they do come up with clams for the pot, why burn them with the hot water? The results will be the same as below. But Mark Twain says it very well and I leave you with that.

>We should be careful to get out of an experience only the wisdom
>that is in it---and stop there; lest we be like the cat that sits down on
> a hot stove-lid. She will never sit down on a hot stove-lid again---
>and that is well; but also she will never sit down on a cold one anymore.
>Mark Twain (Samuel Langhorne Clemens, American Writer, 1835-1910)

826. Russian R-148

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-11 00:00:00 UTC
From: "Lloyd A. Scott, Jr." <"wpul1130@concentric.net"@Concentric.net>
Message-ID: <4uks1o$11h@herald.concentric.net>
Source record: 219072

WTB Antenna for Russian R-148 transceiver. The antenna in appearance looks like the antenna for the Russian R-105M, however the base of the antenna that fits into the connector on the radio is SMALLER.

>all of SouthEastern Wisconsin for only $15/year! Heck, they even have
>satellite receiving stations in the more distant areas I frequent.

There's a big difference between the two. With GMRS you can put mobile and portable radios in the hands of everyone in your immediate family for communication between them. The amateur service can only be used by those with their own licenses, so it's only good for family communications if the people involved have all passed the test.

Don't compare apples to oranges.

There's already a trend in general aviation toward radios that combine GPS and two-way voice capability as opposed to the traditional "nav/com" radios that combined communications with basic VOR capability (sometimes not even at the same time).

834. Need help Identifying Micor .mobile?. repeater

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-11 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <4ullu5$2m7@hptemp1.cc.umr.edu>
Source record: 219080

Hi, I just got hold of a Motorola Micor which I need help identifying.

It's model number is: Q2033A SN# 539CNW0006

It is a UHF (462 MHz) radio with 10 reciever channel elements.
There isn't any place for TX elements so I assume it derrives the TX freq
from the RX channel elements.

On the end of the radio there is n extension aout 5 inches long. In that
extension there is a duplexer! It is set up on a 5MHz split.

The radio has two RF connectors on top 1 UHF and 1 BNC.

The radio also has a tone board.

This looks like a perfect candidate for making a 440MHz repeater.

Can anyone give me more info on this radio? I have a VHF Micor mobile
manual and a 50MHz Micor repeater manual, but nothing I have comes close
to this. I need to find someone with a manual.

Also, why does it have two RF connectors at the top and can I use a
regular Micor control head with it?

Any help would be appreciated.

Thanks,

Scott Sidener

The Ham Radio Online web is still "on the air." However, our new web server located in California's Silicon Valley lost power during the massive west coast power outage this weekend and as of Sunday morning (U.S.) 11 August the http web server is still not functioning. Our ftp access to the web site came back up this morning so we've updated the files. We assume the web server will be brought back online by Monday.

You can access the Ham Radio Online web site at:
http://206.13.40.11/
(www.hamradio-online.com when InterNIC gets their directory updated.) You can also check for updates at our backup web address:
http://www.accessone.com/~vbook/hronline.htm

We've completely redesigned the "List of Other Ham Radio web sites", "Commercial Products Directory" and the Ham Radio Online Library for easier access to all the information that is stored online. It really looks cool and we had a lot of fun learning how to use "frames" for the web pages.

Thanks!

supposed to be a place in alaska that had to dump fishing waste into a stream upstream of a water treatment plant so it could be shown that the addition of the waste treatment plant water would improve the water's quality (had to do with EPA rule requiring treatment plant to improve water quality x%, without taking into account the initial condition of the water or what the water would be like if the treatment plant were not there....). anyone got the exact info on this one?

>> that begin with a title: How to build a (enter your
>> favorite band here) meter antenna that looks like a TV
>> antenna :-)

actually, wouldn't a TV antenna work for 6 and 220 without too much effort?
and 2m might just work on an LP type antenna...will have to see if it's possible
to do some measurements....wouldn't expect there to be too much modification
needed for the use of an existing TV antenna as a transmitting antenna in
the amateur service -- short of adding a balun (6:1 for 300:50 transformation) and
maybe doing some minor changes to the element lengths.

I have miplaced my QST from a couple of months ago. It had an article on interference from small electrical appliancers. My neighbor is giving me an S-9
AC buzz from his newly installed alarm system. It seems to me that a regulated power supply would help, but I cant find the article to back me up. I will pay copy and postage.

Kevin W1FWB tnx

SB DX @ WW $OPDX.266
Ohio/Penn DX Bulletin No. 266

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 266
BID: $OPDX.266
August 11, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N5OGP, K6ANP, NL7TB & USI, 5B4JE, 4Z5GY, DF4RD, F5CCO, F5JJW, F5JPE, G0ARF & BARTG GB2ATG News, JA1HGY, JF2MBF, JJ2QXI, PA3ERC, RA3AUU and VP2ML/WB2CHO following DX information.

SPECIAL NOTE FROM THE EDITOR. Please send all DX announcements/information ONLY to the addresses below and NOT to the distribution InterNet address of: dxinfo@barf80.nshore.org

4X9 & 4Z9, ISRAEL. The prefixes of 4X9 or 4Z9 are being used by Israeli novice class licences. Following the 9 digit, there should be 3 letters suffix (e.g. 4Z9FIG). This licence permits operating on HF (40 and 15 meters) in CW mode only.

6Y, JAMAICA. Fred Maia, W5YI (editor of the W5YI Report), will be operating as W5YI/6Y5, August 11-18th. Look for his 5-watt CW signal 10-40 kHz up from the bottom of the 20 and 40 meters bands. QSL to his home address: P. O. Box 565101, Dallas TX 75356-5101.

A35, TONGA (UPDATE). An update received direct from Paul Kidd, KK6H, now signing A35RK, states he arrived in Tonga on July 31st. He became active on August 1st and at the present, he is operating 40-30-20-17-15 meters with operations on CW/RTTY/AMTOR. He is expecting a "package" of new antennas from Force 12 soon. When they arrive he will be active on 80-10 meters. Paul states again there will be NO 160 meter operation at present, and it's very doubtful that he will have a 160 meter antenna in the near future. Paul also mentions the following: "The "A35 BURO" situation is still uncertain. Discussions with the Director of Tonga Telecom, Hama Naati, are in progress. What we may end up with...and this is only a very preliminary speculation...is a bureau which will only handle cards for paid-up members of the Tonga Amateur Radio Society."

CARIBBEAN DXPEDITION. Peter/PA3BBP, Rob/PA3ERC, Ronald/PA3EWP and Dick/PA3FQA, all members of the Contestgroup Oude Maas (PI4COM), will spend their HAM holiday on Guadeloupe (FG), Dominica (J7) and Martinique (FM) between September 13th and October 6th. They will be active with two stations around the clock on all bands CW, SSB and RTTY. The equipment will be two FT990s, two R7000s and many copper wires to make an antenna for the topband. Their schedule looks as follows:
FG-GUADELOUPE
September 13-18 - Signing as FG/homecall and will be active during the WAE SSB Contest.
14-15 - Using a special call, TO5C (callsign not confirmed yet) as a multi-single entry.

J7-DOMINICA
September 18-30 - Signing as J7/homecall and will be active during the CQWW RTTY Contest with a special callsign J77C (not confirmed yet) as a multi-single entry.

FM-MARTINIQUE
Sept 30 to Oct 6 - They will be active as FM/homecall.

All QSLs will be handled again via PA3ERC by the bureau or direct to Rob Snieder, Van Leeuwenstraat 137, 2273 VS Voorburg, Holland.

CORRECTION. In last week's bulletin (OPDX.265), we mentioned the activation of TM5BEN from Bendor Island as a IOTA island. We have learned since then Bendor is not an IOTA, but this island is valid for the DIFM (Diplome from French Metropolitan Islands) Award.

DX, PHILIPPINES. Nao, JA1HGY, will be active August 13-16th, as DX1RVN. From Manila his suggested frequencies are: 10104, 10114, 18074, 18134, 24894, 24934 etc.... QSL via JA1HGY, Nao Mashita, 8-2-4 Akasaka, Minato, Tokyo 107, JAPAN

FO0, FRENCH POLYNESIA. The LYON DX Gang will once again be active to provide IOTA and EWWA contacts. They will be signing FO0SUC (same as 1995 operation from OC-66 and OC-131). Their activity will be all HF bands on CW and SSB. From October 9-14th, they will be active from Rurutu Island (OC-050). This island is located at 580 km south of Tahiti in the archipelago of Australes. Their operating QTH will be on the north shore, nearby Moerai. They report a submission will be made for a new DXCC country (after 2 failed attempts)!!! From October 14-19th, they will be active from Tubual Island (OC-152). This island is located at 670 km, south east of Tahiti and their operating QTH will be Mataura village in the north shore of the island. Their equipment will be a Kenwood TS-50, a vertical HF6V and a 20 meter dipole. The QSLs must be sent via the bureau to F5JJW or direct to: P.O. Box 7, 69520 Grigny, France.

FREE COPY OF "ISLAND HOPPER". Terry, W9JOO (E-mail: qrziota@aol.com), reports you can receive a FREE copy of "Island Hopper", which is published 26 times a year and is devoted to island hunting anywhere in the world (IOTA, USI, CAN. ISLANDS). Just E-mail Terry your call and mailing

address; and a copy of "Island Hopper"/Subscription infomation will be on their way 1st class mail! Published by Art, N2AU (Publisher of Inside DX) and Terry, W9JOO (Contester & DXer).

GW, ST. TUDWALS ISLAND (WALES). This Welsh island, IOTA EU-106, will be on the air August 16-18th. The callsign to be used is GB2STW. Activity will be mainly on 20 meters (ed. probably on 14260 kHz), but there will be some 80/40 meters operation. This activity was postponed earlier from June due to bad weather. QSL via G3JNJ or via bureau.

JD, OGASAWARA ISLAND (Just a reminder!). Begin looking August 14th for a large operation to take place from here. Operations will last for about 9 days with the team signing JD/7J1AYK. Details on frequencies and their WEB-site can be obtained in OPDX.263 by sending a message to:

opdx-request@nshore.org
SUBJECT: archive
get volume96/263.0 (In the message text. This is case sensitive.)

KL7, ALASKA. Jerry, KD0WZ/KL7, is currently active from Middleton Island, Alaska (NA-042 and AK-132S). Listen to the IOTA frequency of 14260 kHz where Jerry will report in from time to time (if time permits). Jerry is a U.S. Government engineer at the FAA station on the island. If you need Jerry, a sked can be arranged via E-mail by Mike, AL7OB, who works him on 75 meters most nights. Mike's InterNet E-mail address is: melum@anc.ak.net

NEW OFFICERS FOR DX CLUBS 1996-97.....
The following were elected officers in the Oklahoma DX Association. These members will serve during the 1997 associational year (October 1, 1996 through September 30, 1997).

President - Jim Hood, WV5S
Vice President - Ross Hunt, K5R
Vice President - Steve Sweetko, AA4BG
Secretary/Treasurer - Mark Byard, N5OGP

QSL DATABASE (FREE!). Download the latest QSL info file for FREE via the WWW. The latest version now contains over 43.000 QSL Managers or direct addresses. This file is updated monthly and the best part is it is free. Get your copy at URL: http://www.coredcs.com/~mtw

QSL CARDS UPDATE.....
Masahiro, JJ2QXI, reports that all the direct requests for VP5/JJ2QXI have been sent. Cards via the bureau will be sent after VP5/JJ2QXI becomes a member of Japan Amateur Radio League....

RTTY CONTEST. Here is your chance to work some new ones on RTTY! The SARTG WW RTTY Contest will be next weekend and has three periods of operation starting 0000-0800z and 1600-2400z Saturday, August 17th. The final period is 0800-1600z Sunday, August 18th. Exchange consists of RST plus QSO serial number commencing 001. Bands to be used are: 3.5, 7, 14, 21 and 29 MHz.

SPECIAL CALLSIGN. Aris, 5B4JE (Genernal Secretary of CARS), reports Cyprus stations for the months of August and September will be using the special callsign C4UWC. The callsign will be used to celebrate the 5th World University Windsurfing Championship which will take place in Limassol, Cyprus. Participating stations will be signing their callsign/their suffix.

VP8, FALKLAND ISLANDS. Sergej, RW0LBW, is currently signing VP8CWI and is the first Russian HAM on Falklands. He started his activity in the middle of July and will be active for about 1 year. There have been no QSNs reported recently. Sergej does ask for QSLs to be sent: Box 559, Stanley, Falkland Island

VK0, HEARD ISLAND (Team Update). Bob, KK6EK, announces one member of the team for the Heard Island expedition unfortunately had to withdraw for professional reasons. Bob states, "We therefore have a vacancy. If you are interested in joining the expedition, please contact us." The current team is: EA8AFJ/Michel Sabatino, HB9AHL/Willy Rusch, JH4RHF/Junicho Tanaka, KA6W/Ted Algren, K0IR/Ralph Fedor, K4UEE/Bob Allphin, K9AJ/Mike McGirr, KK6EK/Robert Schmieder, N6EK/Bob Fabry, NP4IW/Carlos Nascimento, ON6TT/Peter Casier, PA3DUU/Arie Nugteren, RA3AUU/Igor Booklan, VK2TQM/David Muller, W6OTC/Glenn Vinson, W8FMG/Wes Lamboley, WA0PUJ/Glenn Johnson, WA3YVN/Al Hernandez and 9V1YC/James Brooks. Bob can be reached via E-mail: cordell@ccnet.com

WH0, MARIANA ISLANDS. Yoshi, JE2EHP, and Nob, JF2MBF, will be on the air from Rota Island as WK3D/WH0, from August 11-17th. Activity will be on 40-10 meters with operations on both SSB and CW. All QSLs should go to JF2KOZ either bureau or direct (SASE).

1997 INTERNATIONAL DX CONVENTION will be held at the Centre Plaza Holiday Inn, April 4-6, 1997. The Park Centre Fresno location is more spacious than the Visalia venue. More rooms are available, as is RV parking. There will be a special convention rate of $78.00 per room. The telephone number is (209) 268-1000.
Convention Co-chairman Rich, WB6UDS and Rich, AB6ZV promise that this convention will have more activities and prizes. And, in addition to the usual convention patch, every registered attendee will receive a unique gift. Future notices and details will be forthcoming.

Intelligent, classy messages like the one you wrote are rare
here. Most of what you said is lost on the typical ham.
So if I come up with one liners it is because more than
that will cause most hams to drift away like a Heath VFO.

I don't know what a 733 is, but don't worry about KAWIN. First you
have to fix the radio part, then worry about the software part. The
obvious problem, is that the radio part isn't set up properly. First
you need to have a 9600 capable radio (is the 733 one?), then you need
to adjust the deviation. The simple way to adjust deviation is to start
at minimum and keep turning up until you can connect and transfer data.

Tell dad to adjust the audio, he'll know what you mean :-)

Burt:

Your general attitude usually convinces us that any show of intellect
would be wasted on you, so we keep it well hidden whenever you're around,
and especially on the air.

Can't believe you typed a whole paragraph at once. Watch out or you'll be
over your word and sentence quota for the year.

Even if (as I suspect) you're using sarcasm and irony to provoke hams
into thinking of new ways to relate to other hams, remember the fate of
other writers who pushed it too far -- Swift for one -- you're not quite
subtle enough to pull it off.

T have a 50 ft tower for sale. it is taken down, 2 25 foot sections. the rotor is mounted in the bottom and there is a mast all the way to the top. Thrust berings top and bottom, with a grease fitting at the bottom with a tube to the top bering. The guy did a great job, he was a machinist. 2 coax cables still on it. Guide cables, hand winch, (you will want a dead man, so you can lay it down). and a catcher to support the top of the tower so you can work on the antenna. nice setup
I am moving and didn't get a chance to put it up.
Victorville, CA. $200

And who's great great grandson carries the hate in his heart to this day. Spoken like a true redneck. This is the rite place for this thead Dave. Hell, we do WWII once a month, we can do the Civil War in our spare time. Maybe you could start us off by telling those of us who don't know (or don't really give a shit) what "Remember Andersonville!" means ? After all, Dave, there really isn't much meaningful discussion going on here that relates to ham radio anyway, so if you wanna spice things up a bit with some 'South Shall Rise Again' horse pucky, then go for the gold. There's a bunch of people laying in the weeds who will jump on any and every band wagon that drives by, so you won't get lonely, I can assure you of that. Personally, I'd love to correspond with some of my friends in Kentucky that I don't get to talk to much anymore since I got off the digital satellites.

73, Jim Kehler KH2D

Great-great-grandson of Mr. Elmer Kehler, Acme Candy Company,
who sold candy to the American Indians and thereby introduced them to tooth
decay. (To bad the SOB didn't invent dental floss, I might have been rich
instead of good looking).

861. NCSU club open house

NCSU HAM CLUB OPEN HOUSE

Come celebrate with the NCSU StARS (Student Amateur Radio Society).

When: Saturday, August 24, 11:00 am - 4:00 pm
Where: W4ATC Shack, 428 Daniels Hall, NCSU, Raleigh, NC
From Hillsborough and Horne (1st intersection east of big
library building) enter campus on E. Broughton Drive.
Daniels is 3rd building on left. Parking permit not required.
Talk-in on 145.13- MHz.
What: See the shack and operate if you like (your license or ours).
Gear includes
- HF rigs with big triband yagi and wire antennas
- 6m phone/CW with 5-el yagi (150 watts)
- 2m all-mode with 13-el yagi (165 watts)
- packet
- work Mir and Russian ham sats (11:15, 11:50, 13:00, 14:30, 16:00)

Old QSL cards (since 1934) and other items on display.

For more info contact:
Jim Price N3QYE, jwprice@unity.ncsu.edu

862. Unprecedented Access to Electronic CAE Capability!

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-12 00:00:00 UTC

TEL 414.367.6825
FAX 414.367.6824
kgoerg@webblabs.com

PRESS RELEASE

WEBB LABORATORIES ANNOUNCES EDUCATION PARTNERSHIP PROGRAM
MODERN RF/MICROWAVE CAE CAPABILITY FOR EVERY STUDENT!

In an unprecedented action aimed at establishing truly inclusive access to electronic computer-aided engineering for every engineering, electronics and advanced science student, the Webb Laboratories Education Partnership Program now guarantees access to powerful electronic CAE! Students, faculty and staff are granted explicit authorization to copy, install and use the CAE capabilities and documentation, both on and off site, on an indefinite basis and without expiration!
The Circuit Analysis and Structure Synthesis Option combines powerful audio-to-microwave nodal circuit analysis with comprehensive transmission structure synthesis and analysis, encompassing a multitude of single and coupled planar, wire, coaxial and non-TEM topologies.
The SystemPlus(TM) Option combines system gain, noise and intermodulation analysis with T/R link, radar and terminal bookkeeping, receive and transmit spurious characterization, and system phase noise analysis.
The Circuit/Structure and SystemPlus(TM) modules are available individually or combined with an integrated user interface for the IBM PC and compatible platforms. At last, truly unrestricted access to modern analysis and synthesis!

865. Need help 'with Atlas 210X Power Output Problem.

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-12 00:00:00 UTC
From: "miker in Tigard, OR." <mreiney@hevanet.com>
Message-ID: <320F95CF.4567@hevanet.com>
Source record: 219021
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have an ATLAS 210X that works fine on 40M up, but has only 60W
power output on 80M.
I think that the full power on higher bands eliminates a transistor
problem?
I've swept the output filters, they look fine and low loss, at least at
low power.
The ALC and SWR circuit had all the diodes blown. Can't figger out how
this could happen, but I fixed that. The ALC and SWR limiters are not
the cause of the limited power.
I've examined all the inductors as best I can without disassembling
them. No visible core cracks.
I've tried measuring voltages and comparing between bands. There's so
much RF floating around, that I have no meaningful results. Signal
substitution is out because of the way the coupling transformers are
made. I'm afraid to take them apart. Is there a way to test the
broadband transformers without removing them?

I'd appreciate any advice/experience with low output on 80M.
Thanks, miker

866. Large Ham Classified database->http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-12 00:00:00 UTC
From: wb6siv@cyberg8t.com

Source record: 219022

The Raymond Sarrio Company's Ham Radio WWW site has a very large data base of ham radio classified ads. ALL LESS THAN 30 DAYS OLD! at:

http://www.sarrio.com.

This new classified section allows Hams to search for equipement with the help of our new and unique search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

Sounds like a nifty piece of legislation we have up here now called
EMCAB-2. Part of the reality of it is the necessary tests involve taking
measurments every metre in a cubed grid about the station! Wonder how
much that one is going to cost. It's been stressed at a few meetings that
it's not likely to get to that stage and might only be applied in the
event of an otherwise unresolvable EMI problem, not exactly with you have
to put up with. 73 John VE6OTC

Source record: 219033

Someone asked recently if there was a program to display
an azimuthal projection map. Several years ago, I translated
an algorithm from a basic program in BYTE magazine. This
would probably suffice, although it is now quite dated as
far as screen resolution is concerned.

A better program by far is the Postscript printer program, and it
works well with Linux and Windows (although Ghostscript is easier
with Linux as it's part of the OS distribution usually). AZPROJ or
something like that. It should be easy to find with Web search.

Anyway, for an easy solution try:

ftp://ftp.ucsd.edu/hamradio/packet/tcpip/misc/map.zip

It's also on the QRZ CDROM.

Be careful with the GC.C program included. It has a bug in it
in the area of Radian conversion, I believe I forgot to convert
one of the variables. I wrote a corrected version, but I don't
think it ever got off compuserve. I'd have to type it in again, as
all I have is an old printout (shouldn't trust backups...).

Amen to that. Here's a little story that will amuse and horrify you.

When I took my 20 wpm test (April 1984, the next-to-last session the FCC gave in Seattle before VECs took over), they gave 20 wpm first. There were two or three of us copying. The rest were waiting, getting more nervous by the minute. We were seated at several large tables, so I had to take my test with a bunch of guys staring at me.

One fellow at my table was so fat that his legs barely fit underneath the table. He was very nervous about his upcoming 5 wpm test, and began to jiggle his legs just as my test started! As went his legs, so went the table. So I had to copy several words on the equivalent of a heaving ship. When I saw a "double-dash" coming, I slammed my fist down on the table in front of him and hissed "CUT THAT OUT!" He stopped immediately.

I passed the test with no problem, but I was pretty rattled and the adrenaline really flowed! Fortunately, I had worked my speed up to 25 wpm before taking the test, and done a lot of CW ragchewing on static-ridden 40 and 80m in the months before. Between test anxiety and unexpected distractions like Mr. Jello Legs, it's good to have an edge. And back then, asking the kindly FCC inspector to restart the tape was *not* an option.

73,
Peter - KD7MW

Burp, you're building skills must be rotten. You've mentioned
drifting Heath VFOs on another occasion, also. The Heath HG-10
I built stayed put for hours. If the problem isn't in the contruction,
then maybe its due to you spilling your beer on the VFO.

They do exist. Really. They're used in place of jumpers, I believe.
Someone said that the machines that mount components onto a PC board
can't handle wire jumpers very well, so the zero ohm resistor is
used instead.

I have a old crap 8088 'tole box' as you can say! With the power supply. It's rated 7Amp at 12 Volts but i'm wandering if i can use it to supply my mobile (used as a base) 13.8V tranceiver unit. I dont know much of switching power supply technology and i want to know if it's safe. The problem may be when i switch from RX to TX and from TX to RX... could there be a fatal burst of voltage? Or peraps with a big cap, like 22 000uF, at the exit i can control those peek?

Unfortunately, i dont have an scope to make charge test.

E-mail me on that please...

Thanks and 73 to all readers

: investigation into the radio arts without pecuniary interest according
: to the ITU. The FCC adds that it should also serve to provide public
: service and promote international goodwill. Both bodies recognize that
: the amateur radio service has a role in emergency communications.
: Neither recognize it as a substitute for *routine* uses of cellphones
: or pagers.

: It is obvious that your wife doesn't have a personal interest in
: the radio arts, has no interest in conducting technical investigations,
: nor apparently in supporting public service or emergency communications.
: Thus she doesn't meet any of the primary criteria for being a radio amateur.
: (No amateur has to fullfill *all* of those criteria, though a well rounded
: amateur will participate in more than one.) There are other radio services
: for people like her. CB, GMRS, FRS, and cellphones and pagers were all
: designed for people needing a communications utility, but who have no
: personal interest in the radio arts.

Well said, as usual, Gary.

I plan to contact the repeater owner, inform him of the violation, ask him why his control operators haven't intervened, and let him know that when he asks for my further financial support in the future (January 1st) that it won't be there unless he corrects the situation.

I'm sure that there are people who get into ham radio as a substitute for other communications, many unaware that they are violating the rules. The two that I alluded two in an earlier post certainly do know that what they're doing is wrong.

You probably don't have an HF rig, but if you do, try the 75 meter youth net. This is a new net on 3.970 Mhz every Sunday evening at 8:30 PM eastern time. I just tried to run it, BUT THERE WERE NO CHECK-INS!

ALL YOU PEOPLE OUT THERE COME OUT FROM YOUR PILEUPS AND EXOTIC OPERATING MODES AND TRY THE NET!!! It is for all ages, but geared for the younger generation.

I PUT UP A NEW ANTENNA DURING THE DAY TODAY FOR TONIGHT'S NET, AND THERE WERE NO CHECK-INS! COME ON PEOPLE! WHATEVER HAPPENED TO THE RAGCHEW?

Anyway, this is an HF youth net you can try, and there are many youth nets around, so there is plenty of exposure for younger hams. I am almost 16, and I got into the hobby at 14, and found alot of new friends my age, and older (HIHI) very quickly through my local club.

Good luck!

To "Rigless" from Kerry in Texas,

Man, I feel like I'm answering a personal ad or something! My wife
has been pretty much dulled by the catalogs. She got her ticket and
now she gets the catalogs!

More to the point, I just built a NorCal 40A, from Wilderness Radio.
I think the kit is $135 or so, do a web search for NorCal or
Wilderness Radio. It is a qrp transceiver, about 2-3 watts, covers a
40-50 KHz segment of 40 meters, has a superhet rx and a great 400 Hz
4-pole xtal filter.

I've had mine for about 2 months now and am having a ball with it. It
took me about 5 hrs to build, although some people take 15 hrs. It
has excellent instructions, similar to Heathkit. If you are handy
with a soldering iron, you won't have any problems. Sorry, I read the
engineer part, but some of my EE friends don't know which end of the
iron to hold until it has been plugged in for a while!

73 es good luck with the project and the wife!

I have noted that my display fades when the batt. voltage drops. First check to see that your battery(s) are holding a charge properly. My TH-79A(D) had this problem right out of the box... I had the battery analyzed and found that it was defective, not putting out rated voltage and with a ma capacity of less than half it's nominal rating. My dealer exchanged it with no hassels.

Well, it is that time again! It is Hamfest Season, and it is time
for the annual Duke City Hamfest! Here is all the information:

WHEN: Saturday, August 17th - Sunday, August 18th
TIMES: 8:00 AM-5:00 PM (Saturday), 8:00 AM-2:00 PM (Sunday)
WHERE: National Guard Armory, 601 Wyoming NE, Albuquerque, NM

* * FEATURES * *

* VE Testing (Saturday at 1:00 PM) * Outdoor Tailgate Swapfest
* Hourly Door Prizes * Grand Prize Drawings
* Search & Rescue Forum * Contests
* On-Site T-Hunt * ARRL Forum
* MARS Forum * AMSAT Forum
* RV Parking (Sorry, no hook-ups)

* PACKET FORUM - Information, plus the start of NM's Packet Users
Group!!! Please sign up!

TALK-IN FREQUENCY: 147.15 (+ No PL) Repeater

* * PRIZES * *

Grand Prize: Yaesu FT-840 HF Transceiver
Second Prize: Alinco DR-150 2 meter mobile
Third Prize: Alinco 2 meter HT

* * PRICES * *

Tables without Power: $10.00 each
Tables WITH Power: $15.00 each
RV Parking: $10.00 per Night
Raffle Tickets: $2 each, 3 for $5

See everybody there!! Please E-Mail me if you need any information
before the Hamfest.

Best of 73,
Brian, N5ZGT

FCC-type-accepted FRS
>HT on the FRS frequencies.

I got the biggest laugh out of the last comment. Nothing personal against the writer, but "against the law" when it comes to communication law means NOTHING. No one enforces the law anymore. The FCC has done nothing about the CB "sidebanders" and the numerous problem operators on the ham bands. As for the FRS, does anybody think the FCC is going to chase down violators of the law with this service....hardly!

Based on what the tech at Alinco told me and the mod sheet that came with my 605T there is only one mod. This is to cut the blue wire behind the front panel. This opens up the transmit and receive for CAP/MARS. Alinco designed it as a low cost dual band so it doesn't have all the hidden goodies that some of the more expensive units have.

TORRANCE, CALIFORNIA, 12 AUGUST 1996

When the lights went out on August 10, all over Los Angeles County, there wasn't any point in trying to phone home. Both wired and cellular phones were immediately saturated, and generally unable to complete attempted calls. Within minutes, however, ham radio operators throughout the area were following practiced emergency procedures, on the air and giving public safety agencies detailed reports on the developing situation.

In the South Bay area (between Los Angeles International Airport and Long Beach), members of the Los Angeles County Disaster Communications Service and the Torrance Amateur Radio Association activated a pre-planned emergency channel, which is tested three times a week with regular drills -- as well as being used for public service events, such as communications support for the Armed Forces Day parade. More than a dozen stations checked in to that emergency network, providing minute-by-minute reports on power and water service in various communities, along with eyewitness confirmation on the containment of the discharge at the Mobil oil refinery.

The South Bay net control station monitored both broadcast stations and the county's emergency center transmissions, relaying this information to the local hams. In turn, the local reports were fed to the county's station, which gathered reports from every part of the county in a systematic procedure. More than 50 different stations checked in with the county's information center, using everything from hand-held radios and mobile units to powerful home stations with battery backup power.

Regular drills and major annual events, such as the amateur radio Field Day each June, keep ham radio operators ready for situations like this past weekend's. The proof, however, only comes in a real-world unscheduled test. Ham radio and the Disaster Communications Service demonstrated once again that Los Angeles County has communications that it can count on.

How about buying a NorCal 49'er. It is a 40 meter (Tuned to 7.040 MHz) TRANSCEIVER that fits in one of those metal Altoids mint boxes - with its 9 volt battery!
Power output is 250 mW (More than enough for a nice QSO) and the cost is just $25. The kit is very easy to build and it is a great rig. I earned the 1000 miles per watt award with my very first QSO with it after my first 2 CQs!
For more info, look att he NorCal QRP Club web page. I'm not too sure what the URL is, but you can use a search engine. (I think it starts with http://www.fix.net). Good luck!
72/73,
Brian, N5ZGT

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK .....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
6,000 FILES IN 119 FILE AREA'S..so far !

latest list of AMATEUR RADIO WEB SITES & PAGES
now 2,405 websites & pages !!!!!!!!!
and GROWING FAST ?!?!!

P.S. also available on the web at:
http://www.netcom.com/~kb6axk/ham-web-site.htm
or
http://www.padl.ac.at/schule/chemie/bob.htm
look for web-sites by KB6AXK on the page........

FYI:there are roughly ,over 33,000 pages,just pages,
that relate to amateur radio/ham radio on the web ???????
My list is primarlly websites.............

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.

>What a lowlife.

Mr Fisher et al,

There is a bit more to the story than Mr Greenhalgh cares to tell. He was citing "Medical Facts" the veracity of which were in question. He was challenged to provide a disclaimer when making these assertions. While using the University account does not explicitly infer an official position it can implicitly imply University support of a position. Since several physicians took issue with Mr. Greenhalgh's "Medical Facts" I suggested he disclaim. He refused and invited me to contact the University if I wished. Based upon the response I believe that several people contacted the University. If it was not such a serious matter no one would have ever contacted them. I don't want to reopen this thread but thought you ought to know the rest of the story. No doubt this will be challenged but it is how I see things.

As to you Mr. Fisher. I take issue with your comments about hams and people of German extraction because I am both. Once in a while the urge to jerk your chain overcomes me. I am aware you have the good sense to have your own personal internet accounts and do your posting from there. Obviously your employer has no vested interest in what you say so contacting them would be quite wrong. One of my mentors had a series of numbers tatooed on his forearm. I suspect he had a great deal more personal stock in the German issue you are always raising than you do. Yet he did not refuse to talk to me or teach me. In fact he regularly spoke German with my father. I think you could have learned a lot from this gentleman. He took the Torah rather more seriously than you seem too.

Sorry for the bandwidth I will not beat this horse any longer. It is not possible to debate Greenhalgh as the truth is not in him, and Burt, well, Burt is Burt and I don't think my puny efforts will change him. Going back under my mossy rock Adios Jim et al.

73 Jerry

I am not sure if I am following exactly what you want to do.

If you want to have the same plate on more than one car, I would say
"good luck".

Here in California (and I imagine many other states) you can get ham
plates for you car without paying too much. A one time fee (lat i
checked it was $21) and that was it. No added annual fees such as those
charged to "personalized" plates.

Just like any other type of vehicle registration - you can't have the
same plate number on two cars (exception here being car dealer,
distributer and manufacturer plates - but they pay a lot for those
"special" plates). Even when personalized, plates need to be unique.

But if you want to, you could put "call" plates on your second car and
name like a packet node or something. For example "N7THL-2". But in CA
that second one would just be a personalized plate and would be subject
to all of the associated setup and recurring charges. Don't know why you
couldn't do that in Oregon.

Curtis

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 AUGUST AND FORECAST FOR 14 AUGUST - 16 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 70/5

GOES satellite data for 12 Aug
Daily Proton Fluence >1 MeV: 5.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.4E+06 (normal)
X-ray background: A3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Aug 15 Aug 16 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Aug: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Mostly quiet with one single unsettled
period 0300-0600UT.

Estimated Indices : A K Observed A Index 12 Aug
Learmonth 6 2322 1111
Fredericksburg 7 6
Planetary 5 5

Observed Kp for 12 Aug: 1222 2212

2B. MAGNETIC FORECAST
Date Ap Conditions
14 Aug 5 Quiet
15 Aug 5 Quiet
16 Aug 8 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
13 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST

I have been reading the messages for the past few weeks concerning you vs. the world. You have said things that deeply offend me, so I stopped reading what you wrote. I had a friend over and showed him this newsgroup, and I was embarrassed at what I found during the demonstration.

I happened to read your "challenge" to hams for meeting over the air. I thought about responding, but then I realized that it would be stupid to jeopardize a license that I have worked so hard for. I would be almost as sick as you to waste something like my callsign on you. I believe that many other people here feel the same way.

You have an appalling lack manners. My grandfather tells me stories about people like you. Quite frankly, I think that you outperform several individuals at my school in rudeness.

Respectfully, you have every right to be here, and I have no right to tell you to leave. But please, out of courtesy, stop the flaming in this group. I really have no problem forgiving and forgetting what has been said here, but just stop. It's not a good thing when a teenager like me feels 30 years older than someone like you.

-Adam Kern
N1TYF

And, thanks, but I'll keep my callsign.

What does this have to do with Ham radio? Maybe I don't understand the connection, because the author is so eloquent in his use of the English language.

On 08/10/96 this station upgraged to Extra Class after 4 years of hemming
and hawing about time spent on code. The code is not easy for me so I had
to practice 26wpm (jitter factor) for hundreds of hours. After all was
said and done, I was really suprised how good it felt to earn the
privileges rather than have them given to me. Now I can go back to my
nice comfortable 12-15 wps!!

Message-ID: <9608222359412899@atdbbs.com>
Source record: 218980

>> The FCC authorized FRS May 15, 1996.

The FCC is in receipt of Petitions for Reconsideration that were submitted within the proper time allotted for them - and they have not yet formally responded to them.

>>May I use my FRS radio for business communications?
>>"Small businesses...may be users of this service in
>>their business activities."

This REALLY makes the point clear - this was NEVER meant to be a true, "Family" Radio Service. If so, why are businesses included as viable operators?

For the first time in history, the FCC has forced licensed, commercial operators to share a band with unlicensed, untrained operators. The FRS is within 1/2 "channel" from existing repeater inputs...and there's absolutely no recourse for intentional interference from the new service.

clint.bradford@atdbbs.com

921. Making morse midis

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-13 00:00:00 UTC
From: angus@hamgate.concordia.ca
Message-ID: <4uomfs$t7i@newsflash.concordia.ca>
Source record: 219039

I'm trying to make a midi that is merely composed of morse code, but I'm having quite a lot of difficulty. Obviously, what I'm requesting shouldn't require a lot of power from the application that I would compose these midis, however, finding an application that can generate midis from the PC keyboard is turning into a quite an ordeal.
I think it was Improvise that I got working, and I found that certain brass instruments and synth instruments, when playing a verry high note, sounded pretty close to the 800Hz morse beep. You can imagine the consternation when I found out that Improvise was for playing midi accompaniments.
Are their any applications out there that:
-allow for PC keyboard input
-can play a variety of sound (or one sound that is completely monotonic, with a ~800Hz(?) sound)
-AND runs under Win95, or Dos95, for that matter.

Hello Mr. Kehler,

I see that name calling is still the high water mark in your reparte no matter. I just got a little fed up with Burt insulting folks like you and I (hams, german extraction etc.). If you are seeking to be Burt's Champion you have got to stop calling him Spurt. I am assured by any number of people that I am a character so I guess that it will be OK to use that word in my posts.

Remember if you can't say anything nice then blase away.

Best wishes

Jerry

>Would that be the same netiquette you were following last Christmas
>when you were giving Drew his "Christmas Present" I can repost those if
>you wish.

Hello again Gerry.

I posted only facts about drew, and did not call names or threaten him...or anybody elese for that matter.

>Do you enjoy what Burt has to say about all hams, all persons
>of German extraction? Perhaps you enjoy his challenging older hams to
>physical confrontations?

No I dont Gerry...Burt is out of line too, but if folks like you would ignore, rather than squat to his level, he would go away.

>I respect those older hams who made this hobby
>and can still teach guys like you and I a bunch.

No doubt, and I agree.

>Or is it you are still
>so upset about making a fool out of yourself a few months ago you just
>have to take a cheap shot at me when you get a chance.

(LOL) I have never made a "fool" of myself...fact is, you were the one that was chasties and laughed of thr thread.

You can continue to "fabricate facts" Gerry...it doesnt bother me...everybody knows what the truth really is.

>Since you don't have a disclaimer; am I to assume this an official
>position by the Ohio State University?

Try reading the sig again Gerry...it says "..Tech II at The..".

"At" is the key word there. It means that is my line of work, and it is there (as many others do) for informational purposes only.

I really never thought I would have to explain this to you, but aparently your are having a hard time understanding.

> If you're going to take shots
>you might consider leaving the University out if it.

Your last contact with my employer, in an effort to get me in some sort of trouble, was brushed off. The Ohio State University wont give you the time of day now. Oh sure...they will be polite...but it will end with all of us laughing at you again.

One last question Gerry...why didnt you post your threats to sue me AND The Ohio State University here? Afraid you would be laughed at? Remember what I said...The University has one of the nation most powerful legal departments...hire a REAL GOOD lawyer. :)

Lets look at this a moment...my pink slip says "termination because because he asked Gerry to go to alt.flame, and including where he works at in his internet signature". Spare me Gerry...Im starting to laugh already. One last question, will I be arrested and taken to where you are, or will the trial be held here in Columbus?

Do you have a 440 radio? There is an OPEN linked system of three
repeaters in the 440 band now. The repeaters are KJ6TQ, located on
Mt Lukens, 446.650 - PL 67.0, KN6JE, located on Oat Mtn, 446.4375 -
PL 67.0, and KO6TD, located in Granada Hills, 445.2875 - PL 123.0.
These are a completely open system, any licensed ham invited.
You can hear their weekly net on Mondays at 1800 hrs.

Note: two of these are on "splinter" experimental frequencies. My
Kenwoods all tuned them fine via direct input to the VFO. Some radios
may require you to change your step size to 12.5 KHz first.
This group has been around since the spring of 1993, I believe.
They call the system MARS (Metropolitan Amateur Repeater System).
Try this system out. I promise you will like the people there.

73 & TNX for reading this msg.
In my recently published Internet site list
(msg. title: "DXHUNTER: your score raises"; date 9 Aug;)
about where to find the DXHUNTER program
(DXHUNTER is a new sw pack for DX CLUSTER users),
there was an error on the first listed URL.

Here is the complete list again, with the correction.
http://www.coast.net/simtel/msdos/hamradio.html
http://www.simtel.net/simtel.net/msdos/hamradio.html
http://www.funet.fi/pub/ham/hf-work/
ftp://oak.oakland.edu/pub/hamradio/dos/ham-utils/
(name of the file: DXHUNT5E.ZIP)

Sorry, if you tried the wrong URL, wasting your time.
The above listed URLs refer to the english language
version.

The italian language version can be found at:
http://www.alpcom.it/actis/hamradio/
The italian language version is also available on the
italian BBS radio circuit, where it has been forwarded
a few weeks ago.

Enjoy DXHUNTER: it will raise your score.

You can contact me for any question at:
IK4VYX@I4UJB.IEMR.ITA.EU
All the Best.

>He contacted your employer?

Yes. In an attemp to claim I was representing the university with my sig line.
The ACS department took one look at my sig, and his first words were, "Thats
it!?". We all ended up laughing at Gerry's attempt, but now his latest stunt is
to sue me! (LOL)

>What a lowlife.

I dont call names, but I must agree. Its truly amazing what levels Gerry will
lower himself to, simply because his opinion is not shared by others. Truly
a challenged and immature individual.

Take care.

Rick,

I suggest trying the SW-1 (sold by its designer, Dave Benson NN1G) for about $55 postpaid (he's good in the callbook, write him directly), or the earlier NN1G Mark II transceiver (sold by Dan's Small Parts & Kits, 1-406-258-2782) for $59.95 plus postage.

Both of these are superhet receivers with crystal i-f filters, full QSK, VFO on tx/rx, about 1.5 Watts output, easy to build, and perform well. I have one of each and I like them very much (SW-1 on 40m, NN1G on 20m).

Give 'em a try!

I would check the connector for a shorted braid to center conductor. What are you using for a radio and SWR meter? If you are using a meter in the radio, you could have a bad connection in the radios antenna connector. I have seen this due to people trying to tune their SWR, transmitting too long and melting the solder connection at the circuit board or so239.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 921 11TH AUGUST 1996.

COLS COLUMN

THE CAST IS FAIRLY LONG THIS WEEK, SO I WILL KEEP THE COLUMN SHORT THIS TIME. I HAD A PACKET FROM DAVE VK2KFU RE JIMS FLYING CAREER. HE WAS AMAZED THAT JIM WAS FLYING DC3'S BEFORE HE WAS BORN. DAVE SAYS HE IS GOING ON A DC3 FLIGHT SOON AND WOULD JIM BE INTERESTED. I HAVE PASSED JIM'S PACKET ADDRESS TO DAVE, SO LETS HOPE JIM IS ABLE TO HAVE ANOTHER RIDE IN THE BIG BIRD. BY THE WAY, JIM WAS FLYING DC3'S BEFORE I WAS BORN TOO (AHEM).

[Comment from Dave: I'm in my 40s, and I didn't think that the author was much older than I was.]

WE HAVE OUR TWO MONTHLY MEETING TONIGHT (FRIDAY 9TH AUG), I WILL INCLUDE A REPORT ON THE MEETING NEXT WEEK AND TRY TO HAVE READY AN ANNUAL PRESIDENTS REPORT ON THE STATE OF THE NATION.

FOR THOSE STATIONS THAT COPY THE BROADCAST ON 40 METRES, AS AN EXPERIMENT, I WILL LEAVE MY SYSTEM ON MAILBOX MODE THIS SUNDAY AFTERNOON. IT WILL BE AVAILABLE FROM END OF CALLBACKS UNTIL TO APPROX 0600 UTC, THATS 1600 EST TIME. IT WILL BE OPERATING ON BOTH AMTOR AND PACTOR MODES. IF SUCCESSFUL AND THERE ARE SUFFICIENT CALLERS TO WARRANT IT, I WILL SHARE THE AVAILABLE TIME BETWEEN 40 AND 20 MTRS SO THAT MORE DISTANT STATIONS CAN OBTAIN A COPY ON SUNDAY AND NOT WAIT TILL IT ARRIVES ON PACKET

THATS ALL FOR THIS WEEK, HOPE TO SEE YOU ON MY MAILBOX LOG.

ANARTS RTTY CONTEST UPDATE

ALL STATIONS ARE REMINDED THAT THERE IS ONLY 3 MORE WEEKS TO GO BEFORE THE CUT-OFF TIME FOR SUBMITTING YOUR LOGS. ANY STATION THAT HAS NOT YET SENT THEIR LOGS IN, GET CRACKING.

ABOUT 65 LOGS HAVE BEEN PROCESSED AND ANOTHER TEN HAVE JUST ARRIVED, SO THERE SHOULD BE WELL OVER 80 LOGS IN TOTAL, HOPE-FULLY WE MAY JUST MAKE 100. WE HAVE THIS YEAR A RECORD NUMBER OF STATIONS TAKING PART SINCE JIM VK2BQS BECAME CONTEST

MANAGER. WE WILL HAVE AN INTERIM REPORT ON THE RESULTS OF THE CONTEST BY THE END OF SEPTEMBER. THANKS AGAIN TO ALL THE VK STATIONS FOR YOUR SUPPORT THIS YEAR.

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(2 AUGUST - 08 AUGUST)

ISSUED ON 09 AUGUST 1996

SUMMARY
Date 02 03 04 05 06 07 08
10cm 80 79 78 74 73 72 70
A 11 8 9 8 8 5 (5)
T 9 1 11 1 5 8 11

SOLAR ACTIVITY WAS VERY LOW, OR LOW, THROUGHOUT THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES, EXCEPT FOR A PERIOD FROM 1300 TO 2000 UTC ON 7TH AUGUST WHEN FREQUENCIES WERE ENHANCED TO 30 PER CENT. SPREAD F WAS REPORTED ON 3RD, 4TH AND 8TH.

FORECAST (09 AUGUST - 15 AUGUST)

Solar: Very low

Geomagnetic: Quiet to unsettled

Frequencies: Near predicted monthly values

A Windows version of the IPS HF prediction software, ASAPS, will be available from early August 1996, for AUD350. Upgrades from DOS versions 2.0 and higher will be available for AUD50.

For more details, or to obtain a free demonstration copy, please contact IPS.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 265 - Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2AEV, K6OZL, NL7TB, WB9PTN, AH0W/OH2LVG, DF4RD, DL8ZAJ, DL9GOA & DX News Letter, F6AJA, F6IIE, G4BUE & DX News Sheet, HL1SSG, and LA4LN following DX information.

5N, NIGERIA. The DX New Sheets report that Pete/W0AW, Mike/N9NS, Joe/K8JP and Vincent/G0LMY, will be active October 22nd to November 3rd, on CW/RTTY and satellite RS-12 and AO-13. They will also be active in the CQWW SSB Contest as 5N9N and are looking for two more operators. Contact Pete, W0AW, if you're interested. QSL via N2AU direct only.

5R, MADAGASCAR. Theo, DJ1RL, and Hans, DK8FB will be active starting on Monday, August the 5th. Operation will be until

the 13th. Theo's callsign will be 5R8EY, and he plans to be active as usual in CW with most of his operations on 160 meters. He will transmit on 1824 kHz and listen on/between 1830 - 1832 kHz.

5R, MADAGASCAR. Jean Michel will visit Gerard, 5R8EN, between August 18th and September 8th. He will operate as a guest operator or with a personal call sign. During this period Jean Michel and Gerard will try to go to Nosy Be (IOTA AF057).

EL, LIBERIA. Carl, K4YT/DL4YT, has plans to be active for 2 to 3 weeks from Monrovia, starting August 12th. His callsign was not mentioned. QSL to homecall.

FK, NEW CALEDONIA. Hiro, JE5WIM, plans to be active mainly on CW from August 10-14th. QSL via homecall.

KH4, MIDWAY ISLAND DXPEDITION. The August 1996 DXpedition to the Midway Atoll National Wildlife Refuge, (KH4 and IOTA OC-030), is pleased to announce that the operation will now include satellite modes. Joining the team as satellite operator is Pat Guerin, NH6UY, of Honolulu who is well experienced in satellite operating from a number of other Pacific DXpeditions. The rest of the team includes AH0W/OH2LVG, W2UE, UA3AB and WA7LNW. QSL route for the Midway operation is Bob Johnson, KE7LZ.

KH6, HAWAIIAN ISLANDS. Eric, WB9PTN, will be on Maui from August 10-22th, signing WB9PTN/KH6. He will operate mainly on the WARC bands, and he will also try some low bands. He will also operate in the NA QSO party. QSL via 96 CBA or via WB9PGB.

TK, CORSICA. Paul, F2YT, will be active as TK/F2YT from August 18th to September 2nd. He will also try to be active from some coastal island.

SB DX ARL ARLD036
ARLD036 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Chris, G4BUE, the DX News Sheet, Jean Michel, F6AJA, Min, HL1SSG, Joe, NJ1Q, The DX News Letter, Uwe, DL9GOA, Frank, AH0W/OH2LVG, and Contest Corral from QST. Thanks to all.

FIJI, 3D2. Gianni, I5JHW, will operate 40 to 10 meter CW and SSB August 8 to 14, possibly as 3D2HW. Check out 14022 kHz. QSL via I5JHW.

SOUTHERN COOK ISLANDS, ZK1. I5JHW will be here August 14 to 20, perhaps operating as ZK1XO. QSL via I5JHW.

DJIBOUTI, J2. Jean Claude, J28JA, has been on 160 meters. Try between 0100 and 0200z around 1830 to 1835 kHz. QSL via F5PWH.

GREENLAND, OX. The Danish branch of the International Police Radio Club, IPARC, will sign OX3IPA from Nuuk October 28 to November 11, mostly with CW on 160 through 10 meters. QSL via OZ5AAH with SASE ONLY.

CRETE, SV9. HA0HW will sign SV9/HA0HW/P August 5 to 19, mostly on 30, 17 and 24 meters. He will also do some 40 and 20 meter CW and SSB. QSL via HA0HW CBA.

CORSICA, TK. Paul, F2YT, will sign TK/F2YT August 18 to September 2. He will try to be active from some coastal island.

SOUTH KOREA, HL. The Dongah University ARC of Pusan will go on DXpedition to Maemul Island, IOTA AS-081, August 8 to 12. Listen for HL0BDU/5. QSL direct or via the bureau. The Yonsei Amateur Radio Research Association is QRV until August 3 as HL0Y/3 from Sapsi Island, IOTA AS-080. Check 40 through 10 meter CW and SSB. QSL via HL0Y.

LESOTHO, 7P. Martin, G4FUI, should be active from Maseru until early December as 7P8/G4FUI. He operates CW and SSB. QSL via G4FUI.

COMING EVENTS

AUGUST 17TH-18TH SARTG WW RTTY

SEPTEMBER 28TH-29TH CQ/DJ WW DIGITAL

OCTOBER 19TH-20TH JARTS WW RTTY

I only had it happen to me once. When I use a batt pack bigger than 7.2V
WITH a rubber ducky. Not a big problem. I think any decoupling capacitor
will do the trick.

One problem with switching powel supplies is wideband noise. I used a
stock Yaesu switching PS a while ago, and with low and
shortened antennas the noise was overwhelming. It was OK with high
full-sized antennas.

That PS once gave up at a thunderstorm, something that has never
happend with the conventional PS.

HAMFEST/COMPUTERFEST CALENDAR 1996 - NORTHERN ILLINOIS
last updated June 24, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd annual Hamfest and Computer Festival. Will County Fair-grounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air conditioned main exhibition hall opens 8 a.m. Lots of covered flea marked space, acres of free parking. Grand prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub tickets $4.00, $5.00 at gate for more info e-mail Jim Riley KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at (217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Ham-fest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville,

IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Buildings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

NJ allows twosets of plates. The second set of plates includes a
small number 2 after the call letters. For example:

First set of plates - K2UNK
Second st of plates - K2UNK (2) whhere the two in parens is about
one third the size of the call letters.

We did an OK job in Phoenix too. A 2 meter net formed on the 146.94 machine shortly after the power went off, and passed utility outage information back and forth. The only real help that this net provided was directions to facillities where water and food services could be obtained.

I imagine that there were other nets going on other frequencies, but I didn't happen accross them. I was monitoring 52.525 and 223.500 for traffic, while listening to the 94 net.

Although my power came right back on after a brief fluctuation, I do have enough DC stored in batteries to last for a couple of days with moderate use. I also have an inverter, should small current AC devices need power. With the exception of my computer, everything in my shack operates on 12v. The 12v supply is automaticly switched to battery when power fails.

If anything, this little scenario should make us all take a look at our emergency power sources. Do you have one? How long will the power last? We need to be asking these questions, before we ask them in the dark.

Good news on the excellent ham coverage. Most likely, the success was because
of your constant drills which you mentioned.

Unfortunately, I read the following a day before yours, on a real news service.
Now which do you think that the Republicans are going to remember when it comes
to auctioning off the ham bands.

Quote from Business Wire.
>> NEW WIRELESS PHONE NETWORK COMES THROUGH POWER OUTAGE; PACIFIC BELL MOBILE SERVICES
REPORTS 100% INCREASE IN CALL VOLUMES AT REPUBLICAN
NATIONAL CONVENTION - Pacific Bell Mobile Services announced today
that its new wireless phone network serving the Republican National
Convention performed flawlessly through yesterday's power outage
affecting nine western states.
End quote.

Hi everyone,

I am looking for an old 2-mtr. mobile rig to use on my staion for packet and a very small percentage of voice coms (NO TONES REQUIRED). the rig can be in bad cosmetic shape(also). if it transmits good that's all i need but would be nice if both xmit&rcv worked. I don't have a bunch of money to spend on this rig so if you have an old rig collecting dust or if it NEEDS REPAIRED please let me know and maybe we'll both be happy, You get it out of your shack and I have a rig to run packet. -

Please synthisized if possible I have no luck with crystals. something like an ICOM 25-H,27-H OR KENWOOD TR-7400,7500.

THANKS Bob "KC7OSZ"

It doesn't matter if they are an ass or an elephant. When it comes to
money, issues like this have no party boundaries.

>Quote from Business Wire.
>>> NEW WIRELESS PHONE NETWORK COMES THROUGH POWER OUTAGE; PACIFIC BELL MOBILE SERVICES

And you know what? I'll bet that there will be other wireless services
available for the Democratic Convention. I'm sure that this "wire"
would convey the same message if some other convention of that
magnitude were to have occurred at the same time.

I guess it was the Republicans that took 11 meters from us, 5 meters,
220-222 and everything else right? Take a look at who makes the
decisions about these issues, and take a look at who appoints the
commisioners to seats at the FCC. <HINT> Clinton is about to appoint
one..

Dave,

If you have WWW access you could try the site at:-

http://linux.cec.army.mil/Bille/m*.htm, where * is the list number
starting at m1.

This site has a list of most (?) of the radio gear used by US forces
back to WWII and although most of the entries just give basic details of
equipment some of the older stuff has schematics in .GIF format. I'm
fairly sure that the BC-348 will be one of these as it has all the
different marks listed. I copied the BC-1306 TX & RX schematics and they
printed out nicely.

Cheers,

YEAH!!!!! That's the ticket. Not only can they NOT restrict you
from having a tower, you MUST have at least, say, a 100 foot tower.

If you can't afford one, the government must assist you in getting
one... today FOOD STAMPS, tomorrow TOWER STAMPS!! :-)

956. Icom-735 question.

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-14 00:00:00 UTC
From: torpor@fnal.gov
Message-ID: <4utd7r$mk3@fnnews.fnal.gov>
Source record: 218924

I would like to obtain information on how to unlock the
Icom-735 to transmit on it's entire frequency spectrum.
Has anyone performed these mod(s); or direct me to
someone who has?
Please reply to: torpor@fnal.gov

Thanks.

957. Anyone know what Motorola MUX stands for?

Newsgroup: rec.radio.amateur.misc

Hi, I just found out that I have a Motorola Micor that has duplex/MUX

I was wondering what MUX meant.

Thanks,

Scott Sidener N0WFL

Isn't it wonderful that in this country we have freedom of speech, which also is the freedom to act like a total ass. I'm glad you took advantage of that freedom, Steve. I'm also glad that you said what you said, because that way I don't have to say anything whatever critical of you -- you ensured that everyone who read what you wrote would understand that you took advantage of the freedom.

Where can I get a list of anticiipated dates for the release of the Gates? I'm surprised not to find more at this group on this topic. W3LOY wanting to become W8LOY since once upon a time I was also W2LOY.

962. DXer / Contester Florida Pool Home, $109,900

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-14 00:00:00 UTC
From: dsnowden@ncdc.noaa.gov
Message-ID: <4utded$ego_005@ncdc.noaa.gov>
Source record: 218930

Palm Bay --- 3br 2bath all brick pool home, 1760 sq ft, 2700 under roof. 3/4 acre private lot on cul de sac. Large 1 yr old pool with automatic cleaning/chlorinating equipment. Large screened enclosure. Deep well sprinkler system. Fruit trees (orange, guava, pineapple). 3 miles from new hospital, 5 minute drive to shopping. Palm Bay is located about 3 miles from the Atlantic Ocean as the crow flies and about 60 miles SE of Orlando/Disney World. Room for at least two towers. Up until a few months ago I had two towers as well as a fullsize 40m ground plane on a 30 ft pole. Home is slightly skewed on lot, enabling extra room for antennas. If you are a contester, I have won several contests from Palm Bay, and placed well n CQWW for 4 land several times all with little gun antennas/radios. Good DXing location. No TVI (cable tv) but in a country atmosphere. $109,900 Appraised at $123,000. No state income tax. Warm winters. Will consider offering furnished. N4IJ Call (407) 984-9360 dsnowden@ncdc.noaa.gov

dsnowden@ncdc.noaa.gov

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z AUGUST 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 AUGUST AND FORECAST FOR 15 AUGUST - 17 AUGUST

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 13 Aug
Daily Proton Fluence >1 MeV: 3.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 7.7E+05 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Aug 16 Aug 17 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Aug: 69/3

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled to active

Estimated Indices : A K Observed A Index 13 Aug
Learmonth 11 2223 4322
Fredericksburg 10 8
Planetary 10 6

Observed Kp for 13 Aug: 2212 2212

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Aug 8 Unsettled
16 Aug 6 Unsettled
17 Aug 6 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
14 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Aug Normal Normal Fair
16 Aug Normal Normal Normal
17 Aug Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Aug 2

Observed Australian Regional MUFs:
Darwin: 15 - 30% depressed for the period 00-08UT, otherwise
near predicted monthly values.
Townsville: Near predicted monthly values.
Sydney: Enhanced greater than 30% for the period 10 - 18UT,
otherwise near predicted monthly values.
Hobart: Near predicted monthly values, with spread F
observed during local night.

Predicted Monthly T index for August: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Aug 10 near predicted monthly values
16 Aug 10 near predicted monthly values
17 Aug 10 near predicted monthly values

Elephants have good memories. Like the fact Clinton was a draft
dodger and a pimp. At least Nixon got caught in only a cover-up,
Clinton got caught with the whole fucking FBI files. And that
asshole Panetta (or whatever the pimp spells it) saying Gingrich
lied when he said that the White House staff all had clearance
problems because of recent drug use. Turns out the spokesman was
the biggest pimp of them all.

Only a moron would claim to be a democrat...

I am aware of a gentleman who resides in Oregon and has additional vehicles
with Idaho and South Dakota plates on them. He uses a relatives address in
Idaho, and his Oregon address for the SD plates - apparently SD does not
require you to be a resident to have their plates. Yes, the SD registration
has an Oregon address.

BRANTFORD AMATEUR RADIO CLUB'S

FLEA MARKET

At Burford Fairgrounds, Burford, Ontario
On Highway 53 - 15 km West of Brantford

SATURDAY AUGUST 17th, 1996

From 9:00 am.....Admission $5.00
Vendors 7:30 am.....$8.00/table plus admission
Tailgaters Welcome.....$4.00 plus admission
Expanded: 2 buildings this year.....Acres of free parking
Major Door Prize: $700 gift certificate from Norham Radio Inc.
Talk-in on VE3TCR 147.150+

For more info and table reservations, phone or write:
Richard La Rose, VE3RLX Brantford Amateur Radio Club
153 Dunsdon St. P.O. Box 25036

Hey, there, folks

Just bought the wonderful ft50r and found out that I don't know what most of the functions there are for.

So, could someone tell me what DCS and/or ARTS modes are? I know what the abbreviations stand for, but have no idea what they mean!

Thanks very much for your help.

Why are you going to buy a radio that needs mods?

Or, asked another way, why are you wanting to mod a radio you are buying?

Inquiring minds want to know.....

BTW, I have the DR-610T and I am happy with it. In stock form.....

-snip-

I'm glad to hear things were successful in LA, but I don't feel they went so smooth in San Diego.

It seems there was very poor organization on amatuer emergency comm. here. I was only listening to the 2m band, which seems to be the band of choice for amatuer emergency services. There was a net control operator on the 146.730 Mt. Palomar repeater collecting information from different areas of town on utility status. He would call for an area, like Northern Escondido, and a station would come back with a report. Seems well enough, but he would randomly jump all around town and never cover some areas.

He seemed to cover mostly the north county of San Diego, but would occasionally drop down and ask for a report from La Mesa or El Cajon, in the southeast and eastern area, respectivly. He would leave some gaps in the transmission, so I read my call and community name (Spring Valley, in the south east), and I was instructed to stand by until he got to that area. Problem is he never got there and went into a 'standy by mode' waiting for any emergency traffic, which I did not want to interupt. He also missed several calls for net control during this time (non emergency calls, fortunatly).

Tuning around other popular 2m repeaters and simplex frequencies (including the ARES freq for my area) produced nothing except one unrelated QSO.
It seems that there also should have been some communications with local government and services, but I heard none of that.

I only critcize because I think we in SD can do much better than that. God forbid we should have a real emergency with life threatening situations, and amatuer radio has an oportunity to help out and drops the ball. Did anyone else in SD participate or monitor this as well? I am interested in your opinion either way.

Thanks for you time,
-BP

996. HTX202 mod fix,heres all of it

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-14 00:00:00 UTC
From: richard <n6uzs@juno.com>
Message-ID: <3211A111.BFB@juno.com>
Source record: 218993

Ok folks heres the mod for the ER2 error message on the 202. I had
posted a few days back and couldn't get the info until Sunday.

The ER2 message is displayed when there is a current ripple coming off
a battery such as a BP8 on keydown. The ripple is strong enough to
cause the CPU to reset therefore "ER2" on the display.

To filter out this ripple perform the following mod:
Place a .01 microfarad capacitor between the positive and negative leads
where they connect into the main PC board. These leads come off the
bottom battery plate and head for the PCB. Each leg of the cap will
bridge both wires and filter any ripple. The type of cap to be used
as indicated by my friend is a ceramic disk cap.

PLEASE NOTE THE FOLLOWING DISCLAIMER:
This mod came from a technician at the Tandy Repair Center located in
Santa Fe Springs, California. My friend Jeff had this ER2 problem for
a long time before describing it to a technician at the Repair Center
in "person". The tech then came up with this cap fix for the radio.

This is the reason nobody at Radio Shack seems to know how to fix this.
I asked my friend why nobody else knows this bit of info outside
of the Repair Depot. His answer was a confused "I dont know!".

You'd think that technician would like put this info in some kind of
repair bulletin and spread it around. Then again maybe he needs the
repair work REALLY bad here. ;)

That's why I encourage everyone to spend the 40 bucks on thier TSP
deal for nice 5 year warranty package for repairs free of charge.
My friend has taken both of his 202's in at least 4-5 times already
but he only lives 30 minutes away.

Hope this helps all those 202 owners out there. Please post to the NG
here in regards to any results you come up with after the cap mod.

Good luck,
Richard N6UZS.

The "facts" Gerry is refering to, were in question only to him.

>He
>was challenged to provide a disclaimer when making these assertions.

A blatent lie.

>While using the University account does not explicitly infer an
>official position it can implicitly imply University support of a
>position.

Only a child or challenged person would see things this way (see my sig at the bottom).

>Since several physicians took issue with Mr. Greenhalgh's
>"Medical Facts" I suggested he disclaim.

The only alledged physicians the took issue with my post(s), agreed with me. Again, I believe this to be a blatent lie.

>He refused and invited me to
>contact the University if I wished. Based upon the response I believe
>that several people contacted the University.

Nobody but Gerry contacted OSU...and his claims were promptly laughed off this campus.

>If it was not such a
>serious matter no one would have ever contacted them.

Well I still have the same sig, dont I?

>I don't want to
>reopen this thread but thought you ought to know the rest of the story.
>No doubt this will be challenged but it is how I see things.

Gerry most recently has threaten to sue The Ohio State University, because ...now get this...I asked him to go to alt.flame! I think this clearly sums up

Gerry's character...enough said.

Take care all.

998. Digest of Articles - QST Jun 96 (Long - 44k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-14 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <4usfon$9dc@news1.infinet.com>
Source record: 218995
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the June, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub3/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
SEND INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:The Radio Sky
Author>Emerson, Darrel - AA7FV, G3SYS
Source>QST Jun 96, pp. 32-35
Abstract>Many types of astronomical objects, such as stars, clouds of dust and/or gas, and galaxies, emit radio noise. Radio astronomers study these signals to learn more about the cosmos.

Digest>For more than 60 years, it has been known that radio noise is coming from the sky and is stronger from some directions than from others. For over 40 of those years, noise has been known to emanate from stars and many other celestial objects, from clouds of hydrogen atoms to galaxies. The study of such emissions is radio astronomy.

Cosmic noise can affect amateurs in that it adds to all the other sources of noise and degrades the signal-to-noise ratio during reception. This article illustrates the radio sky by means of a "false color" photo and contour charts showing how the noise is distributed over the entire sky. (False color means areas of the sky are shaded in various colors that represent noise amplitudes.)

It further describes the units that are used in measuring the noise level and how the values are affected by the beam width of the antenna in use, by the bandwidth of the receiver, and the frequency at which the observation is being made. The most common way of denoting noise amplitude is in degrees of "antenna temperature", representing the temperature of a resistor that would generate the same noise amplitude as that actually observed.

Title>TA2:Transfer Relays - Overlooked Bargains
Author>Ford, Jim - N6JF
Source>QST Jun 96, pp. 36-37
Abstract>Transfer relays, designed for switching VHF/UHF power, are very useful for amateurs. They are often available in hamfest flea markets at low prices. This shows how they can be used.

Digest>Transfer relays are devices that are often available from military surplus and found for low prices at hamfest flea markets. Although they are made in various configurations, usually they are cylindrical and on one end there are four N-connectors mounted in a square pattern. They are used for switching coaxial cable connections and are usually designed for VHF/UHF operation.

Internally, each contains two sets of contactor blades. If one identifies the four coax connectors as A, B, C, and D, actuating one set of blades connects A to B and C to D; the other set connects A to C and B to D.

The article illustrates a number of common applications for which transfer relays are ideal. They involve switching a power amplifier into and out of the circuit between a transceiver and an antenna; switching either of two transceivers to either of two antennas; and switching a pre-amplifier into and out of the front end of a receiver.

Title>TA3:Electrical Safety
Author>VanProoyen, L. - K8KWD
Source>QST Jun 96, pp. 38-40
Abstract>Low-voltage, high current sources can also be dangerous. Contains hints for working around automotive electrical circuits.

Digest>Much has been said and written about protecting one from death or severe injury from high voltage. This article describes the very real danger of injury from working around low voltage, such as 12-volt automotive systems. Among the advisories given:

1. Remove all jewelry before working on low voltage - high current sources. If a ring should get shorted across a car battery, for example, the heat could literally burn off a finger.

2. Always remove the battery ground lead before working on the system.

3. Always use a fuse, as close to the battery as possible.

4. Properly size the fuse for the wire(s) it must protect.

5. Properly size the wire for the current it must carry.

6. Secure all wires and always use grommets where wires pass through bulkheads.

7. Route cables with care near the engine or moving parts.

8. Never work alone. Some other person should be available to help, or to call for help, in case an accident occurs.

Rules for working on circuits of any voltage, high or low:

1. Never work while tired, or otherwise impaired.

2. Make sure a circuit is dead before working on it.

3. Do not trust interlocks to remove voltage. Test the circuit, and install your own ground jumpers. Never defeat interlocks.

4. Always short large capacitors to ground before beginning.

5. Periodically check permanently installed grounds.

Title>TA4:SMALL - A Surface-Mount Amplifier that's Little and LOUD!
Author>Ulbing, Sam - N4UAU
Source>QST Jun 96, pp. 41-42, 68
Abstract>Describes a very simple audio amplifier built from surface-mount components. Useful for boosting the audio output of an H-T transceiver for use in noisy environments.

Digest>A major purpose of this project is to gain experience in building equipment using surface-mount (SM) components. The device is an audio

amplifier that produces as much as 2-watts output, although the whole circuit, including a voltage regulator chip, is on a PC-board no more than 2- or 3-square-inches in size. The author uses it when operating his 2-meter HT in his car. The 2-watt output provides ample loudspeaker volume to override car noises.

The entire circuit is comprised of an LM-4861M amplifier chip, three resistors, two capacitors and the regulator components. Mr. Ulbing gives several helpful hints for working with tiny SM parts. He recommends tweezers to handle them, and a tiny soldering iron. He found the ideal tip for his Weller 25-watt iron to be one with a 1/32-inch-wide chisel tip. He used solder designed specifically for this use: Radio Shack's 0.022-inch diameter silver solder, Stock No. 64-013. One should also have a heat-insulated stick of some sort to hold the components down during soldering, since they are so tiny that the surface tension of the solder tends to make them stick to the iron!

The power output is sufficiently large that it requires a larger speaker than the typical 2-inch diameter types in H-Ts. He uses a speaker rated at 5-watts, maximum, which performs admirably.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:Ten-Tec T-Kit 1208 6-Meter Transverter
Author>Bliss, Norm - WA1CCQ
Source>QST Jun 96, pp. 62-64
Abstract>Review of an inexpensive, high-quality transverter that will allow any ham with an HF transceiver to operate on 6-Meters.

Digest>The 6-Meter band is underused in most areas, even though it has very attractive characteristics. It is the only VHF band that sometimes has F2 openings to DX countries. The fact that some popular HF transceivers now on the market provide 6-meter operation means that band occupation will certainly increase.

For amateurs who do not want to invest in new transceivers just to try the band, by far the least expensive way to do it is to build a 2-way transverter to use with their existing rigs. This review describes the Ten-Tec kit-built unit that sells for less than $100, complete.

In operation, the transverter uses a 36-MHz. crystal oscillator to convert 20-meter output from the transceiver to the 6-meter band, and the 6-meter received signals from the antenna to the 20-meter band. A solid-state r.f. sensing circuit performs the transmit/receive switching.

The maximum transverter power output is about 8-watts; that small amount of power is adequate to take practically full advantage of the band, especially since high-gain antennas are quite compact on 6-meters.

Using the transverter in transmit requires the excitation to be no more than 5-watts. Most modern transceivers can be adjusted to that level by front-panel control. If one's transceiver cannot be adjusted to that low an output, it should be relatively easy to design and build a circuit to attenuate the output to that level.

The 14-MHz. drive power is prevented from passing through the transverter to the antenna by the internal design which, Ten-Tec claims, attenuates it by 75-dB., or more. Used as a receiver, the conversion gain was measured as 17.9-dB. by the ARRL Labs. The noise figure measured 7.3-dB.

The reviewer found construction of the kit to be straightforward, so long as one carefully follows the directions contained in the excellent instruction manual provided. The only tools required are those in the typical amateur's toolboxes, including a 25-watt soldering iron. For adjustment, the bare minimum test equipment required is an accurate RF wattmeter on the source of drive power, and a VOM with a DC current range up to 1-amp. A frequency counter, 50-MHz. signal source, and a dummy load are optional, but would make the job easier.

Title>PR2:Radio Shack 22-168A Digital Multimeter
Author>Gruber, Mike - WA1SVF
Source>QST Jun 96, pp. 64-66
Abstract>Describes a digital meter which provides, in addition to normal VOM functions, four others: capacitance, frequency, and hFE (transistor) measurements, plus computer-interface for plotting graphs.

Digest>This review describes a shirt-pocket size digital multimeter. It performs the functions expected in a general-purpose VOM, plus four extras. First is capacitance measurement ranging in six steps from 0-1 nanofarad to 0-100 microfarads. Next is a frequency counter ranging from 1-Hz. to 19.5-MHz., by decades. Third, the unit comes with software and a provision to attach the meter to a personal computer which will log measurements and also plot graphs from the accumulated data. The fourth is a scale for measuring the hFE of transistors. (Note that this is not useful for testing FETs).

The interface causes the computer to log and plot the meter's measurements on a graph, similar to the display on an oscilloscope except that the sweep can take from seconds or minutes, to days. Maximum sample rate is about one per second.

The accuracy of the meter was tested by the ARRL Lab and found to be accurate to 0.1-percent of full scale, on almost all scales. But the manual that accompanies the meter was found to be barely adequate. The reviewer suggests that a user might also want to buy a Radio Shack book: USING YOUR METER, that gives much more comprehensive instructions. However, not even that book describes the PC interface. The software contains a file of instructions that can be read, or printed, by the computer.

The price of the meter is $129.99; the operations manual comes with it. A service manual is available for $7.20; USING YOUR METER sells for $5.99.

Title>PR3:RF Applications Inc P-1500 Digital RF Power/VSWR Indicator
Author>Lindquist, Rick - KX4V
Source>QST Jun 96, pp. 66-67
Abstract>Operation review of a digital HF power and SWR meter. It is auto-ranging and useful for both high- and low-power use.

Digest>This article reviews an HF power and SWR instrument. It is digital and autoranging, over a minimum of about 1-watt to full legal power. The instrument is remarkably tiny, slightly smaller than a 4-inch cube. It has only one control on the front panel: a mode switch. Pressing the switch sequences the instrument from Forward power, to VSWR, to Reflected power, and to True power.

In the middle of the front panel is a four-digit LCD indicator that displays the value. The overall accuracy is approximately the same as that of the familiar Bird analog wattmeters.

Full-scale span of the instrument is automatically switched over three ranges: 0-120, 0-750, and 0-1500 watts. As opposed to analog meters, the digital meter registers peak power, an advantage to SSB operators.

Operating power requirements are 12- to 16-volts DC at 200-milliamps, from an external source. The manufacturer's list price for the P-1500 is $219.95. A suitable power supply is $16.95.

Title>PR4:Azden HS-03 Headset
Author>Swanson, Glen - KB1GW
Source>QST Jun 96, pp. 67-68
Abstract>Description of a combined headphone and microphone assembly allowing hands-off radio operation.

Digest>The word "headset" means a combination of headphones with an attached microphone. The HS-03 is designed specifically for amateur use in situations like contests in which both hands must be kept continuously on the logging-computer keyboard.

The headband and attached phones are padded and adjustable for optimum comfort. The microphone is supported by an adjustable boom that pivots on one earphone. The dynamic mike element supplied in the HS-03 provides a frequency response from 300- to 4000-Hz., with a 6-dB. rise at 2500-Hz.

The manufacturer's list price for the headset is $69.95. An optional push-to-talk accessory box with a toggle pushbutton (push for on, push again for off) is available for $40. It also contains a preamplifier with a slide switch to select either a flat frequency response (for "Local" use), or a high-frequency boost (for "DX") use. A similar accessory that also provides VOX is available for $50.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:A Poor Man's DVR
Author>Markey, Rick - KN3C
Source>QST Jun 96, pp. 71-72
Abstract>How to adapt a computer with a sound board, and associated software, for use as a digital voice recorder. Allows playback through a speaker, and also through a transceiver.

Digest>KN3C operates a Kenwood TS-850 transceiver. He wanted the facility to record portions of the received audio during QSOs and, in some cases, to be able to play back some of the recording to give the originator an "ultimate signal report". To make this possible, he installed a Sound Blaster 2.0 into his computer, and used the accompanying software, called "Creative WaveStudio".

His letter gives full details of how the receiver audio output was fed to the Sound Blaster board. The output from the board was connected to both an accessory speaker and also, through an audio coupling transformer and attenuator, to the transceiver for retransmission. No doubt, with similar arrangements, it would be possible to accomplish the same results with other computer boards and transceivers.

Mr. Markey reports that the system is easy to use. Before starting a QSO, he puts the WaveStudio software into the "Record" mode, ready to begin recording any time he presses the "Start" button. After making the recording, he usually reviews it through the speaker before playing it back.

Title>TC2:Copper-Wire Shunt Precautions
Author>Bloom, Alan - N1AL
Source>QST Jun 96, p. 72
Abstract>Copper wire shunts have a high temperature coefficient of resistance. It may cause measurement errors if the operator is not careful.

Digest>This letter is a supplement to the article by K8TM in QST Jan 96: "How to Measure Large Direct Currents with Common Meters". The original article recommended the use of copper wire of different diameters for meter shunts. This letter points out that, while the wire makes very effective shunts, copper has a high temperature coefficient of resistance: 0.39-percent per degree C.

The meter shunts are usually in heavy current applications, so the shunt, itself, will dissipate power and its temperature will rise. This is in addition to a likely rise in ambient temperature if heavy current apparatus is used in the vicinity. A rise of temperature from 18- to

35-degrees C. (64- to 95-degrees F.) will change the resistance by 6.8-percent. Much higher temperature rises may be encountered in other circumstances, causing errors in meter calibration of as much as 25-percent. Users should be forewarned!

LAB NOTES (LN)
Prepared by: ARRL Laboratory Staff

Title>LN1:Troubleshooting Electrical Noise
Author>Hare, Ed - KA1CV
Source>QST Jun 96, pp. 73-74
Abstract>Contains hints for finding, and eliminating, radio noise emanating from electrical equipment and/or power lines.

Digest>In this article, written in a question and answer format, the author gives a number of hints for searching out and correcting receiver noise that emanates from electrical appliances, or other sources connected to commercial power lines. All kinds of electrical apparatus produce electrical noise in some circumstances.

The best place to begin is within the user's own household. The most effective tool for finding noise sources is a battery-operated AM broadcast receiver. Tune it to a clear frequency and put it in a location where the noise is loud, then turn off power circuits, one at a time, to find the one that causes the interference to stop. After isolating the noise to one circuit, it should be easy to find the source.

If it is found that the noise does not originate within the building, it will be necessary to search the neighborhood. For that use, an AM portable radio with HF and VHF bands is most useful. It can frequently be used as a direction finder, of sorts, to track noise sources. Often the noise will be loudest near where the power lines enter a house or building, indicating that the source is probably inside that building.

In many cases, the noise will follow the power lines. In that event, the best source of help is the power company. Most electric utility companies have technicians whose job is to find and correct problems of radio noise. Find out who that person is and request their help.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Step Start for the Heath SB-1000 Linear Amplifier
Author>Branca, Mike - W3IRZ
Source>QST Jun 96, p. 69
Abstract>A simple circuit that introduces a short warm-up time delay in an amplifier.

Digest>W3IRZ has a Heath SB-1000 linear amplifier and became concerned at the stress put on the filament of the power tube and the power supply components from the inrush current that occurs when the main power switch is first turned on. To provide a one- or two-second delay time for the full voltage to build up, he developed a very simple circuit.

The circuit places a resistor in series with the a.c. power line between the main switch and one side of the transformer primary. The operating coil of an a.c. relay is wired in parallel with the primary, and the contacts of the relay short out the dropping resistor.

When the switch is first closed, the load on the transformer is very high, since the filter capacitors are totally discharged and the tube filament is cold. The relatively heavy inrush current causes a substantial voltage drop through the resistor, allowing the transformer voltage to rise only part way. As the filament warms up and the capacitors charge, the inrush current falls and the voltage across the primary climbs. When it gets high enough to actuate the relay coil, the dropping resistor is shorted out and full power is applied to the amplifier.

The dropping resistor and relay were built on a small piece of aluminum that was mounted inside the SB-1000 cabinet. A wiring diagram, components list, and a photograph of the final installation are included.

Title>HK2:Tips for the Yaesu FT-1000D
Author>Williams, Barry - KD5VC
Source>QST Jun 96, pp. 69-70
Abstract>Improve CW operation with a narrow 3d IF filter; use two antennas for dual-diversity reception; and add a hi-fi audio system to enhance operation of the FT-1000D.

Digest>KD5VC offers three additions or modifications to the already fine Yaesu FT-1000D transceiver. The first involves the switching arrangements for selecting different IF filters. As built, the transceiver offers a variety of bandwidths in the crystal filters in the second IF, but only two ceramic filters (a wide AM and a 4-KHz. SSB filter) in the third IF. A great improvement in CW operation can be had with the addition of a 250-Hz. third-IF filter. This hint provides instructions for arranging the switching network so that the narrowest filter in the second IF will automatically be selected when the narrowest third-IF filter is called for.

The next hint takes advantage of the fact that the FT-1000D contains two complete receivers. The author recommends that a separate antenna switch be added and that two antennas be connected to the respective channels, one vertically and the other horizontally polarized. Known as "dual diversity" reception, this arrangement will often make dramatic improvement during conditions of deep fading.

His third recommendation concerns the use of an external stereo audio amplifier to increase the enjoyment of the transceiver.

Title>HK3:More on Magnetic Stainless Steel?
Author>Trout, Stanley R. - WB2SHR
Source>QST Jun 96, p. 70
Abstract>Not all stainless steel is non-magnetic. The 300-series grades generally are, but the 400-series grades are not.

Digest>In QST Mar 94, N1EDM noted that "magnets do not attract stainless steel". This author correctly points out that two general classes of stainless steel are in common use: the 300 series and the 400 series. The former grades are generally non-magnetic, but the latter are usually ferromagnetic (magnets attract them). However, he mistakenly states that the 300 series (most common grades: 303, 304, or 312) contain a good deal of chromium, whereas the 400 series (430 is most common) is high in nickel content. The exact opposite is the case; the 300 series is high in nickel (and also contains chromium); the 400 series contains chromium, but little or no nickel.

Title>HK4:A Space-Saving 2-Meter Antenna
Author>Shapiro, Gary - WD8DOT
Source>QST Jun 96, p. 70
Abstract>Describes a convenient and unobtrusive 2-Meter antenna that is usable almost anywhere. It is simply a half-wave mobile glass-mount antenna attached to an outside window.

AMATEUR SATELLITES (AS)
Conductor: Steve Ford - WB8IMY
Managing Editor

Title>AS1:The Death of OSCAR 13
Author>Ford, Steve - WB8IMY
Source>QST Jun 96, p. 81
Abstract>OSCAR 13's orbit is decaying. It will burn up in the atmosphere in December, 1996.

Digest>Nearly all hams, even those who do not operate via satellites, have known that OSCAR 13 has been in orbit for some eight years and has made DX contacts spanning nearly a whole hemisphere easy. The key to its success has been the highly elliptical orbit that takes it some 35,000-kilometers (more than 20,000-miles) above the earth at high north latitudes.

Now that orbit is decaying. The interaction of the gravity from the earth, sun, and moon has caused the perigee (the point on the orbit closest to the earth) to fall lower and lower. In a few more months, it will begin to touch the edge of the atmosphere. When that happens, each pass will incur enough air friction to slow its speed slightly. That

will mark the beginning of the end, because each subsequent orbit will make the orbit decay that much more quickly.

As the perigee falls slowly, the apogee (the point where the orbit is farthest from the earth) is falling much more rapidly, making the orbit less elliptical. It will finally become nearly a circle before the "bird" falls to its death.

By some time in November, each pass through perigee will encounter so much air friction that OSCAR 13 will heat up appreciably. About that time, the electronics it contains will fail. It will continue in lower and lower orbits for a few more weeks until, some time between December 5 and 12, it will burn up in the atmosphere at a place somewhere on the night side of the earth, near 50-degrees north latitude.

FEEDBACK (FB)

Title>FB1:"Explore Ham Radio's Software Bonanza", QST May 96
Author>Kleinschmidt, Kirk - NT0Z
Source>QST Jun 96, p. 68
Abstract>Corrects the identification of the publisher of SKYCOM PRO. The program is now renamed: PROLAB PRO.

Digest>In the subject article, SKYCOM PRO propagation software was reviewed and the publisher was mistakenly cited as Fuentez Systems Concepts. The program is actually offered by Solar Terrestrial Dispatch, Box 357, Stirling, AB T0K 2E0, Canada. It has been renamed: PROLAB PRO.

Fuentez Systems Concepts offers a different propagation program called SKYCOM 2.0. Their postal address is: 11781 Lee Jackson Hwy, Fairfax, VA 22033.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Jun 96, pp. 51-52
Abstract>Questions and answers on subjects of primary interest to newcomers to amateur radio.

Digest>Questions discussed in this issue include: proper use of 12-volt deep-cycle batteries; the proper length for ground-plane radials; how to use a microwave oven to test insulator efficiency; the advantages of quarter-wave over half-wave vertical antennas; Q signals; and other subjects.

Title>NHC2:A Simple LED SWR/Power Meter
Author>Rideout, Art - WA6IPD
Source>QST Jun 96, pp. 53-54
Abstract>Describes an easily-built substitute for the analog meter movement in an RF Power/SWR meter. Provides indication of peak power, not just average power.

Digest>When one is operating SSB, power/SWR meters using analog meter movements register a kind of average power, not peak. The peaks in human voice communication are instantaneous, and no moving-coil meter can keep up. An effective alternative that really shows the peaks uses ten LED indicators in a row, driven by an LM3914 bar-display driver chip. WA6IPD shows an easy way to build such a unit that can be used to substitute for the analog meter movement in the bridge circuit that all such meters use.

The article provides a complete schematic diagram and parts list, in addition to photos of two different versions that he has built. An etched and drilled PC-board for this project is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269 for $5.25, including domestic shipping.

Title>NHC3:Accessing the FCC Amateur Data Base on the Internet
Author>Baran, Fuat - N2YGN
Source>QST Jun 96, pp. 55-56
Abstract>"Callbook"-type data is now available, on-line, always up-to-date.

Digest>The Federal Communications Commission database containing all amateur licenses is now available on the Internet in convenient form. The FCC, itself, makes the entire database available online, but does not provide a conventional database search facility. Certain universities and radio clubs have set up their own databases which they update frequently from the official source and make available in a form easy to use. One is the University of Arkansas at Little Rock. It can be accessed by Telnet to Port 2000 on callsign.ualr.edu, or by Web Browser to http://www.ualr.edu/doc-hamualr/callsign.html. Another is the Columbia University Amateur Radio Club's Web page at http://www.columbia.edu/~fuat/cuarc/.

Some clubs monitor new licenses issued in their areas and contact the recipients by phone or mail to acquaint them of local activities and invite them to participate.

Title>NHC4:The Mailbox Matching Box
Author>Holsopple, Curtis - K9CH
Source>QST Jun 96, pp. 57-59
Abstract>Describes the construction of a versatile antenna tuner in a common rural mailbox.

Digest>K9CH has built an L-network antenna tuner in a common rural mailbox with the two adjusting knobs, for capacitance and inductance adjustments, coming through the fixed end of the box. He painted the box white, making a neat-appearing, versatile tuner that he uses in temporary Field Day operations, as well as at his home station.

The main body of the article is a general discussion of antenna tuners, with descriptions of the types of variable inductors used and sources where they may be obtained.

Title>NHC5:The Writing Game
Author>Ford, Steve - WB8IMY
Source>QST Jun 96, pp. 60-61
Abstract>An invitation from QST's managing editor to submit articles for publication. Includes advice for preparation of acceptable manuscripts.

Digest>Mr. Ford, QST's managing editor, issues an invitation to any interested person to submit articles for possible publication in the magazine. He goes on to offer advice concerning what the editors are looking for and procedures that aspiring authors should use to maximize their chances of acceptance.

Among the points he makes are that QST prefers to receive submissions of text on floppy disks, but photographs and drawings on paper. The editors are flexible about mistakes in spelling and grammar, and will correct a few, but those factors still count. Anyone who has a spelling checker with their word processor should use it!

Writing styles should be informal, not stuffy. He recommends that any would-be writer become familiar with: THE ELEMENTS OF STYLE, by Strunk and White, available in any public library. Also, they should obtain free copies of the QST Author's Guide. The full text can be downloaded from the ARRL InfoServer, or will be mailed to anyone who sends a request, along with a stamped and self-addressed envelope, to ARRL Headquarters.

If a person has an idea for an article and would like to know whether QST would be interested in it, before the author puts forth the effort of writing it, the editors are always willing to consider such a request and will give a prompt, frank answer.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:North Country Island-Hopping
Author>Reisenauer, Jr., John - NL7TB
Source>QST Jun 96, pp. 28-29
Abstract>A "DXpedition" to Alaskan islands.

Digest>In July, 1995, the author and two other hams made "DXpeditions" to two islands in Alaska. They were Fox Island and Douglas Island. Fox Island was designated AK-94S in the Amateur Radio "US Islands" (USI)

program, and also NA-197 in the "Islands on the Air" (IOTA) program.

Even though the activities were conducted in mid-summer, the weather was cold and stormy. Getting to, and setting up equipment on, both islands was difficult, uncomfortable, and even dangerous.

From Fox Island, they made more than 1100 contacts with 60 countries, all on 20-meters. Two-thirds of the contacts were outside of North America. From Douglas Island, they made 500 additional contacts.

Title>GI2:Cranberries Dragged Me into Ham Radio
Author>King, Frank - AA7XA
Source>QST Jun 96, pp. 43-44
Abstract>A newspaper reporter learns about ham radio while interviewing cranberry farmers.

Digest>The author of this piece is a journalist who wrote a newspaper article about a small cranberry-growing operation in Oregon. The growers were Sam and Carol Dorning, KA7EAT and N7HEH. While interviewing them, he noticed their radio antennas and station, and became interested in ham radio.

On their recommandation, he joined a radio class run by the late Bill Eidenschink, W7IHO, at Oregon Coast Community College, passed the license exam, and became AA7XA. This article describes the sequence of events and the pleasure he has since received from ham radio.

Title>GI3:Low-Power Transceiver Kits You Can Build
Author>Lindquist, Rick - KX4V
Source>QST Jun 96, pp. 45-50
Abstract>Product reviews of seven different CW transceiver kits.

Digest>This article is actually a product review of seven different CW QRP transceivers that are built from kits. Five different reviewers built one or two of the seven and have written summary reviews of them.

G-QRP Club GQ40
The GQ40 is offered by GW8ELR in Wales. It is for a single band, either 20- or 40-meters. It has a superhet receiver, 6-pole crystal filter, and a vernier dial in a cabinet about 3- x 6- x 7-inches. Power output is 7-watts, maximum, with full break-in operation.

The finished item is a "hot" receiver, with excellent selectivity and ample audio output for a speaker. The purchase price for the 40-meter kit is $156, the 20-meter one $165, including shipping in USA. It is distributed by Kanga US, 3521 Spring Lake Drive, Findlay, OH 45840.

Gary Breed Transceiver
This unit is a single-band transceiver, approximately 3- x 6- x 8-inches, with VFO control and 5-watts maximum output. It provides a single-signal superhet receiver with AGC, filters in both IF and audio,

semi-break-in with relay T/R switching, sidetone, S-meter, and built-in speaker. The IF filter is a 4-pole crystal circuit which, combined with the audio filter, provides excellent selectivity.

The unit is built around a Motorola MC3362 VLSI chip. It can be built for any amateur band from 80- to 15-meters. The kit is supplied by 624 Kits, 171 Springlake Dr., Spartanburg, SC 29302 for a price of $153.50, plus shipping.

Oak Hills Research OHR-400
The OHR-400 provides four-band operation (80-, 40-, 30-, and 20-meters). The receiver contains an RF preamplifier, a 4-pole crystal filter and a 4-pole audio filter. It offers full break-in and sidetone, and an optional built-in keyer is available.

The cabinet is about 4- x 9- x 9-inches. The reviewer remarked that the boards are among the highest quality that he had ever seen. They are a pleasure to solder, and instructions are thorough; but it is not a beginner's project.

The finished rig is notably easy to use. The dial is smooth and selectivity is very sharp. He found that it copies weak signals about as well as his full-size commercial transceiver.

The kit is supplied by Oak Hills Research, 20879 Madison St., Big Rapids, MI 49307, for a price of $319.95, plus shipping. The optional keyer adds $39.95.

S&S Engineering TAC-1
The TAC-1 is a microprocessor-controlled, synthesized, single-band transceiver. It uses a digital LCD frequency display. It can be built for either 40- or 80-meters. The receiver is a single-signal superhet with IF filtering and switchable audio filtering. Transmit output is 5-watts.

The reviewer was highly complimentary of the parts packaging and organization of the kit. Circuitry is built on two PC-boards connected by ribbon cable; no wiring is used, at all. A 75-page manual provides complete construction information, but this kit is not for beginners.

He comments that "operating the TAC-1 is one of the finer joys in life". Since the rig is the only one of the seven to have synthesized frequency control, the operator always knows the precise, drift-free operating frequency.

S&S Engineering is located at: 14102 Brown Rd., Smithsburg, MD 21783. The price is $199.95. An optional keyer is $29.95.

Small Wonder Labs Green Mountain 20
This is not a complete kit; it contains the PC-board and most components to build a CW superhet QRP transceiver for 40-, 30-, 20-, or 15-meters. It provides only the parts that are mounted on the board. Cabinet, connectors, pots and switches are not supplied. An experienced builder

will have no difficulty with the components and construction manual supplied.

It uses a varactor VFO, 4-pole crystal filter, full break-in, RIT, and an accurate transmit offset. Power output is limited to less than 2-watts. Receiver performance was found to be excellent; the selectivity allowed the reviewer to hear weak signals very close to strong ones.

The Green Mountain 20 is supplied by Small Wonder Labs, 80 E. Robins Ave., Newington, CT 06111. The price is $75.00, postpaid.

Wilderness Radio NorCal 40A
This unit is very small, about 2- x 5- x 5-inches in size, and was designed for the camper or backpacker. It is very simple in construction and is suitable for a beginner.

The quality of the boards and parts is excellent. Its 4-pole IF crystal filter provides very good selectivity (passband about 400-Hz.) and the receiver is extremely sensitive. Power output is about 3-watts and power consumption is very low. A small gel cell lasts an entire weekend.

The only calibration mark on the tuning dial indicates the QRP calling frequency: 7040-KHz. The front panel contains RF gain control, RIT on/off switch, RIT control, and the main tuning dial. The NorCal 40A is supplied by Wilderness Radio, PO Box 734, Los Altos, CA 94023-0734. The price is $129.00.

Wilderness Radio Sierra
The Sierra provides coverage up to nine bands, with plug-in modules for the separate bands. It is about 3- x 6- x 6-inches in size. It provides 2- to 3-watts output on all bands, contains an S-meter, a vernier dial, RF and AF gain controls, and RIT.

Construction of this unit, though not for a beginner, would be within the capability of one who has built one or two simpler kits. It is priced at $215 for the basic kit; with any three band modules, it is $295; with all six band modules, the total price is $369. Shipping is extra in all cases. The supplier is the same Wilderness Radio Company that supplies the NorCal 40A.

The Wilderness KC1 Frequency Counter/Keyer
Wilderness Radio offers an accessory for either the NorCal 40A or the Sierra. It contains a frequency counter with no visual readout; it announces the three-digit result of a frequency count in Morse code! Furthermore, one can enter a desired frequency in CW, then manually tune across the dial. When the tuning reaches the specified frequency, the device signals it. In addition, the accessory contains an iambic keyer that ranges from 8- to 50-wpm. The price is $45.00, shipping not included.

>Jeff KH2PZ

And Frank, if you're interested, this thread is a perfect example of what's
wrong with this newsgroup. I don't know if you read the whole thread, but
I'll give you a quick instant replay:

< Instant Replay On>

Somebody came along and said something about 'channels' on the ham
bands. A few other people pointed out (nicely) that the ham bands don't
have what are normally referred to as channels. Then the pro's jumped in,
and the technical debate started - never mind anymore if we have channels
or frequencies, we are at the stage now to see who's debating team wins.
Nothing being said about channels or frequency anymore, now we are
debating the technical definition of infinity. Forget channels, forget
frequencies, forget ham radio, now it's nothing but a debating contest.
Then the debating teams tire, or found new debates to debate and things died
off. And finally, the one line artists come along and try and keep things alive
with smart ass remarks.

<Instant Replay Off>

I constantly hear crying in this newsgroup about what certain people type that gives ham radio a 'bad image' and gives the 'new people who may be reading this group' a wrong impression of ham radio. There are a few people still using this newsgroup that have a lot of experience with the hobby, and who have a lot of valid information that they can add to any discussion concerning ham radio. Jeff happens to be one them. And Jeff happens to be one of them that says things in a nice way. In this particular case, what Jeff said is VERY valid - get on the ham bands on HF and start callling a frequency the 'center of a channel' and you are going to make anyone who hears you wonder how much you know about the hobby. But Jeff says it and you come along and give him bullshit. It's not his opinion, it's a fact. Anyone who has been a ham for more than 15 minutes would agree it's a fact.

Everybody's entitled to an opinion. Opinons are open to debate. It doesn't do much good to debate facts, because debate doesn't change them. Debating facts just confuses people who don't already know what the facts are.

Anyway Frank, here's why this newsgroup is how it is. People come along and 'find' it and try to add valid opinions or facts to a discussion. And they get back bullshit. So what seems to happen is one of two things. They either A) give up and go away, which in many cases is the newsgroups loss, or B) they get pissed off, and decide they don't have to take bullshit without slinging some back, so they start slinging. Pretty soon they realize that no matter what opinion they have or what facts they state they are going to be attacked, so they just become shit slingers themselves. Which is also the newsgroups loss. Any 'newbies' who come along probably leave totally confused thinking *everything* they saw here was bullshit.

There are no decent discussions about anything ham related here. There is nothing but bullshit. There are a few people left who have something worth hearing to say, but constant remarks like yours will eventually run them off or turn them into what everyone says they don't want here. There's plenty of unadulterated totally off the wall crap posted here every day. Why you chose to attack Jeff, instead of using your one liners somewhere that they would be more pratically applied is beyond me.

I can't imagine, Frank, that you are so ignorant of the hobby that you would channelize HF. I can only imagine that you enjoy the bullshit.

So anyway Frank, if anyone ever posts a message again asking why this newsgroup is so screwed up, and why it gives ham radio such a bad image, (which I'm sure they will) why don't YOU explain to them that it's this way because the people who use it every day made it that way, and seem to want to keep it that way, and are doing a damn good job of it.

Chris, we all read the AIDS debate. Then we read the debate of the AIDS debate. Now we are reading an instant replay of the debate of the AIDS debate. If you and Jerry were both here, I'd give you each a 2x4 and let you go out in the back yard and settle this once an for all. You don't have to keep defending yourself. You're smart enuff to realize that this has ABSOLUTELY nothing to do with ham radio. If you want to keep it up, I can send you Jerry's email address. He loves getting email anyway. You should both be glad you don't have AIDS. And we would all be glad if you use 2x4's, boxing gloves, lawyers, or whatever you need to use to settle this elsewhere, and then just let us know who won.

BURT!
Get a Kenwood TH-79ad. These are wonderful radios for the following:
1. They have those lovely FET power modules that will let you run 'em
for days on end without recharging. 2: They have DOT MATRIX
DISPLAYS!! This means that it can spell things; the thing has online
help, so you only need the manual for complicated stuff. 3: 80
memory channels between the two bands (2m/70cm). 4: Comes with PL
encode AND decode STANDARD, sir! 5: Comes with a nice dual-band
antenna, not your average duck. 6: You can enter alphanumeric labels
for your frequencies, so you can look at a repeater name instead of
the frequency, if you like (it's nice if there are lots of repeaters
you can't remember calls for.) 7: All the mods are already out, and
this thing goes all over the place (136-174, 410-470 tx/rx, although
I'm sure no hams are interested in extended TX.... :) 8: It's made
by Kenwood, and we can expect their products not to blow up for quite
a long time. I ordered from AES and got a nifty carrying case, too.
9: THERE IS NOW A COMPANY ADVERTISTING IN QST THAT MAKES
NICKEL-METAL-HYDRIDE BATTERIES FOR THIS RADIO... perhaps in the
future, we won't have to have exam questions about the infamous memory
effect. I got this radio when it was young for about $460, but the
price has probably come down since then. Even in my young version,
all the bugs seem to be worked out. This radio rocks. (I swear I
have no affiliation with Kenwood or AES... just one happy TH79 owner.)

Passed my no-code tech and now I'm wanting to play! :-) Of course the first thing I did was get the scanner in my car but now I want to yack a little bit. What all can I do? I was thinking of a mobile unit or handheld as it seems I'm always on the road. Figure it could also double as a base unit. I also saw a radio that you could make phone calls on. How do you do that? What are some good resources for a new HAM? I'd like to really be able to talk to people far away. Do I need to learn Morse for this? Any help appreciated!

More like a fantasy. I am *very* sorry to read of your loss; statistics show 1 in 4 women will suffer from that form of cancer. But let's please keep emotion out of this ruling. Self-denial that RF cannot cause illness will only hurt yourself, but coming on here and stating that to hundreds of thousands of folks is irresponsible.

Keep your HT at its lowest power setting (not only for health reasons but also to comply with Part 97). Use a speaker mic and hold the HT at arm's length when transmitting (who cares what that will look like - you'll be setting a good example).

Be safe,
Jeff KH2PZ

> > Eat sh*t and die Burt.

> How the typical gutless ham responds.

Burt Fisher you are a PUSSY so shut the fuck up.

You are dumb too.
------------------End John Mackey KA0SSF's anonymous post--------------

That particular post came from onyx.indstate.edu with the Organization
line reading "Myself & I-2." Your current "I own the Portland .435
repeater" came from biosys.apldbio.com with the Organization line also
reading "Myself & I-2." Both articles contain the address
suprise2@where2.edu, only this time you were actually dumb enough
to sign your name and callsign. I guess we should allow the possibility
that someone forged your name and call ("yeah, that's what happened")
but I believe that the accused is burdened in proving their innocence.

Prosecution rests.

Jeff KH2PZ

P.S. Any licensed ham can become a rptr owner - there's no virture
in that - and practically any transceiver can be made into a crude
rptr. Thus, you hold no special significance in the amateur community; but
now among the internet community you are scum for not having the courage
to use your real address to accompany your remarks.

start refering to each HF frequency as the center of a channel, be pre-
pared to be called a lid. In 20 years of being a General I've never
heard "channel" being used on HF.... One wonders if Shannon defines
`Ham Radio'."

One could consider that a bit of useful advice to newcomers. Our
ham radio culture is over 80 years old, and culture has to play
just as important a role in our day-to-day on-the-air activities as
textbook definitions. A new ham with only a textbook at his/her side
might become very discouraged very quickly if (s)he isn't made aware
of the cultural particulars of our hobby in advance; they might
encounter abrupt endings to QSOs otherwise.

So tell me Frank, what "usual crap" did I dish out in the above? What
do you find so offensive about it that you'd say it's a waste of
bandwidth (whatever that means - don't you mean disk space?).

>If Jeff were to take the time and read what others are saying instead of
>monologuing, that would help the group tremedously too.

The short paragraph above was a response to Gary, and was supposed
to finally end this textbook vs culture tug-of-war.

>I think this group would be a lot better without the one liners,
>unfortunately some people don't stop dishing out until they receive some.

If you insist upon projecting one-liners, why not consider doing so via
email?

>Anyways I'm gonna follow my one advice and save the bandwidth. (or is
>that channel???)

No, it's disk space.

> \|||/
> (o o)

Did you know that there are Bulletin Board Systems (BBSes) oriented
toward amateur radio? There are quite a few of them, in 63 area codes and
6 countries, and we are adding new listings all the time.
To find out where they are located, point your web browser to:
http://www.vni.net/thedirectory and go to the "search engine." Enter the
words "amateur radio" (and in a different search enter "ham"). It will
return a list of area codes where the boards are located. Click on the
links to go the individual area code listings.
Remember to return to the website about once a month as we regularly
find and list new boards and new descriptions for existing listings.
There BBSes on just about any topic that you may be interested in.
If you came by before and didn't find much with the search engine, come
back again. We found a problem with the search engine and it is now fixed.

jim -- this says that the convention's phone systems stayed up. one of the things that was considered for the new pbx at the office was a "in house cell radio" system where key people would have portable phones but would have all the features of a wired phone through the proprietary system (the phones are "cell" phones - the system works that way - but they're not interoperable with the normal cell radio systems..)

and performing flawlessly might not mean that it completed every call and presented every caller with dial tone when requested...

this could just mean that the local systems had batteries and inverters on line.

Well, you are probably right, but the prevous poster (the post to which you direct your amusement) did answer the question that was asked. Existing commercial / amateur gear will not, for the most part, meet the technical requirements of the law, even if it weren't for the type acceptance problems.

Posit: What will an FM transmission of 5 kHz deviation sound like on equipment designed for signals with a maximum deviation of 2.5 kHz? Will it be "obvious"? Of course, since 50% of the new FRS frequencies are the same as existing GMRS frequencies, I suppose it won't matter.

1026. WA8IMO wants to know !

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-15 00:00:00 UTC
From: georgehe@unix.asb.com
Message-ID: <Dw5uEB.6os@news2.new-york.net>
Source record: 218860

In response to a recent post by Bob Sull WA8IMO,

Why would you buy a radio to mod it?
"Inquiring minds want to know" ....

When purchasing a new dual bander I was considered if it can be
modified to broaden its coverage.

>> Begin debate thread<<<

I am very involved in ARES/RACES and when purchasing gear I want to
know if CAP and broadbanding mods are available.

On several occasions I have been invited by other agencies to communicate
within their system. There are systems for which I have authority to
use and they fall adjacent to the ham bands.

One could question such use for GMRS or the new FRS too.

>> Begin first comment <<

But I prefer only to resort to such tactics if/when such a situation exsists
which warrants such actions, or when specifically asked to do so.

>> End first comment <<

And later often happens....

The "type acceptance" issue......

Yes, a modified amateur radio is not type accepted for use in other services.
However to use a quote from an recent article by a popular amateur author

"In a life and death situation, dual band amateur radio handheld
equipment may be operated on frequencies outside of normal band limits.
FCC Rule 80.311 applies to marine channels, 90.75 applies to interant
channels, and FCC Part 95.143 applies to the GMRS"

So, in a life and death situation, or if you break the rules, only when
openly invited by an agency you may actually have benefit for such gear.

In making these inquires of this newsgroup I have heard tales of
horrible people such as volunteer firemen and DMAT teams doing
the exact same thing.

Read first comment again ....

OK, done with my explainations to the mindless.
When do the book burnings begin ?

George,
That sounds like a pretty rational explanation for modifying radios, thanks for explaining that to us. Most hams I have met who wouldn't buy a radio that didn't allow out of band transmit either suffered from a 'Junior G-Man' complex or the 'I-have-been-carrying-an-HT-around-so-long-that-I-think-I-am-a-Po-lice-man' syndrome.
There is just one thing you said that has me a little confused. I would appreciate it if you could expand on it a bit. You said:

>On several occasions I have been invited by other agencies to communicate
>within their system. There are systems for which I have authority to
>use and they fall adjacent to the ham bands.

What has me confused is this: If you 'have the authority' to use the systems you mentioned, why would you need to be 'invited by other agencies' to use them ?

I think I understand the part of the FCC rules that state when someone life is in danger, type acceptance doesn't matter. So I guess on the several occasions you were invited to participate in communications on the other agencies systems that you mentioned, something pretty dangerous must have been going on. Please tell use about that. Stories of hams helping to save lives are great publicity for our hobby.

73, Jim KH2D

Has anyone ever had any luck asking the truckers on 20 meteres to turn down their mike gain? These guys run their rigs like cb radios with amplified mikes running wide open and splatter +/- 10khz.

I think running a ham rig on a truck is great. If I drove one I would certainly have my rig on board. I just wish these guys understood what problems they cause and cared enough to "turn it down."

In TN you can have as many as you like, but an additional number is added
at the end of the call. They are so called "EMERGENCY" tags and cost no
more than regular ones. The numbering system example is: KF4KEK for they
first car then KF4KEK-2 for the second. You have to apply befor 9/31 to
get them in March.

1036. Hams help hospitals --- A new Web site

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-15 00:00:00 UTC
From: homingin@aol.com
Message-ID: <4uv9jl$mdd@newsbf02.news.aol.com>
Source record: 218870

For over 15 years, the 90-plus members of the Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

--- How HDSCS organizes to support hospitals
--- What "dedicated communicators" are and why they are important
--- Frequently Asked Questions about hams helping hospitals
--- The surprising answer to "How often do hospitals need hams, anyway?"
--- Response from hospitals served by HDSCS
--- Info given to new HDSCS members
--- Recruiting hams for hospital communications
--- And lots more...

URL is http://members.aol.com/emcom4hosp/

Please add it to links at your ham radio, ARES and RACES sites.

1039. OPINION Best HF radio to replace one hit by lightning

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-15 00:00:00 UTC
From: gbaron@deskmedia.com
Message-ID: <321309fa.44323602@news.deskmedia.com>
Source record: 218873

My HF radio was destroyed by lightning. It was a Kenwood TS440SAT. I
might want to upgrade to say a TS870 or perhaps the 450 is good enough
which is the value I will get from the insurance company. Is it really
wroth an extra 1000 for an 870 or Yeasu 736 or ICOM FT900 or what
would you suggest?
I am pretty much limited to an R7000 for an antenna or dipole. My R7
was also destroyed (took direct hit !!!),

Thanks for the Email, Jim. Seems my server just got this and I am now seeing it. As I've said in my email, Jeff's a big boy who can talk for himself. He started dishing out his usual crap and I responded. If he can only make an intellegent comment when HE posts then he should be able to make one when he contributes to someone else's posts.

If Jeff were to take the time and read what others are saying instead of monologuing, that would help the group tremedously too.

I couldn't care less about channelizing anything. Call freqs what you want. po-tay-to po-ta-to.

I think this group would be a lot better without the one liners, unfortunately some people don't stop dishing out until they receive some. An unfortunate part of dealing with egocentrics (Not necessarily Jeff).

Anyways I'm gonna follow my one advice and save the bandwidth. (or is that channel???)

1042. Using Keyers?

Hi!

I've never tried a "keyer" other than a straight key...
Would anyone care to comment on the pro's and con's of keyers?
Should I bother? What are they good for? When are they bad?
How should they be used? What should I *not* do with a keyer?

I don't even know what other questions or concerns might be
involved... any information would be appreciated. Thanks.

Most hams have NO CLUE what happens on a real scene; what PD/FD responders need or want from outside agencies in terms of assistance, communications related or otherwise. That RACES/ARES card does not buy you any legitimacy with most emergency personnel, unless you ARE or have been one.

So when some Joe Ham asks a somewhat legitimate question he gets flamed by the holier than thou extra's who think their 1X2 or 2X1 callsign makes them all knowing.

If it takes someone EXPLAINING why they would have a legitimate use for a modified radio to an EXTRA CLASS ham, then I would question that individuals grasp of the real world.

If your not a chef, then don't comment on the quiche.....

1046. GB2RS News 18th August 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-15 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <840159825snx@llondel.demon.co.uk>
Source record: 218880
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 18th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with the news that next weekend, the 24th and 25th of August, is the Historic Scotland weekend, when ten special event stations will be on the air from historic sites around Scotland. Each station will be active from 0800UTC Saturday until 1700UTC Sunday, mainly on 20, 40 and 80 metres SSB. Details of the callsigns and location of the stations can be found on page 94 of this month's RadCom, but please note that unfortunately GB2HSA will not be active. For full details, contact Mike Dalrymple, GM4SUC, whose address is correct in the Call Book, or phone him on 01292 443127.

A new 50MHz propagation beacon is now operational. As part of an experiment by the RSGB Propagation Studies Committee, Chris Deacon, G4IFX, of Darlington, County Durham, has been granted permission by the RA to use the callsign GB3IFX for his 50MHz tropospheric tests. The beacon transmits on 50.275MHz, on the hour, every hour, in 30 second bursts during which the callsign and time are sent twice.

Emley Moor 70 centimetre beacon GB3MLY on 432.910MHz returned to service on the 27th of July, having been off the air for about three months. It is now using a new ruggedised 6-element Yagi antenna beaming at 170 degrees. Any reports should go to Peter Blakeborough, G3PYB.

Listeners to the 2 metre GB2RS news broadcast at 9.30am local time in Cornwall should note that from the 1st of September it will be made through the north Cornwall repeater on channel R5 and not on S21. This will be for a trial period of four months. Reports will be welcomed either by the newsreader or direct to GB2RS manager Ian Kyle, GI8AYZ, whose address is correct in the RSGB Call Book. The purpose of the experiment is to improve coverage in this difficult terrain.

Jamboree On The Air takes place this year over the weekend of the 19th and 20th of October. All those applying for a GB special event callsign for Jamboree On The Air will receive a free 'JOTA Pack' containing lists of participating stations and countries permitting third-party greetings messages plus a newsletter from the Scouts Association. Groups intending to operate during Jamboree on the Air using club station callsigns with prefixes such as GX or GS should inform Eva Telenius-Lowe at RSGB headquarters by the 4th of October if they also wish to receive a free JOTA Pack.

The Radiocommunications Agency has agreed to a rise in the fees for Morse code tests. From the 1st of September the new rates will be 20 for the 12 words per minute test and 15 for the 5 words per minute Morse code test.

The Chairman of the RSGB VHF Contests Committee, Steve Thompson, G8GSQ has recently changed address and phone number. Steve, who was formerly GW8GSQ, can now be contacted at PO Box 2399, Reading, RG7 4FB. His phone number during evenings and weekends only is 0118 982 0848. At other times this line is switched to a fax machine. Steve can also be contacted by e-mail - g8gsq@blacksheep.org.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Madagascar, F6AJA is visiting 5R8EN and plans to be active either with that callsign or with a personal call from today, the 18th of August, until the 8th of September.

From Liechtenstein, a large German group will be active using the HB0 prefix in front of their own calls from Saturday the 24th of August until the end of the month. Activity will be on all bands including 6 metres, 2 metres, 70 centimetres and satellite.

And from Luxembourg, Fraser, G4BJM, will be active as LX/G4BJM/P on CW for one week from today, Sunday the 18th.

Next the Rally News:

The Red Rose Rally takes place today, Sunday the 18th of August, at Horwich Leisure Centre, Church Street, Horwich, near Bolton, just off junction six of the M61. The event features a bring and buy sale, special interest groups and an RSGB stand. Doors open at 11am, or 10.30am for disabled visitors.

The Great Eastern Rally also takes place today, Sunday the 18th, at the Cattle Market, Hardwick Narrows in Kings Lynn, Norfolk. This event also features an RSGB book stall and membership information stand, as well as an indoor exhibition and outdoor car boot sale. Doors open at 10.00am or 9.45am for disabled visitors, and talk-in is on 2 metres channel S22.

The Cardiff Amateur Radio and Computer Fair takes place at the Star Sports and Recreation Centre, Splott, in Cardiff today, Sunday the 18th. Doors open at 10.30am.

Coleraine and District Amateur Radio Society are holding a radio rally next Sunday, the 25th of August, at the Lodge Hotel in Coleraine. Doors open at 12.00 noon and for further details contact John, MI0AAZ, on 01265 54930.

The Stroud Amateur Radio Society car boot sale and radio rally is next Sunday the 25th of August. Details from G0PKJ on 01453 836206.

The Galashiels and District Amateur Radio Society's open day and rally takes place next Sunday the 25th at the Volunteer Hall, St John's

Street, Galashiels. Doors open at 11.00am at further details can be obtained by calling 01896 850245.

The Torbay Amateur Radio Society rally is held at Torbay Leisure Centre, Clennon Valley, Paignton from 10.00am next Sunday the 25th. For details ring 01803 214445.

Huntingdonshire Amateur Radio Society are holding their annual August Bank Holiday Monday Rally on the 26th of August at The Ernulf Community School, St Neots, Cambridgeshire. The event features a car boot sale and a large hall with traders. Doors open at 10.00am and talk-in will be on 2 metres channel S22. For further details contact David Leech, G7DIU, on 01480 431333.

And Swansea Amateur Radio Society are also holding an amateur radio and computer show on Monday the 26th of August in Singleton Park, Swansea, as part of the Swansea City and Council Summer Show. Doors open at 11.00am and for further details you can contact Roger, GW4HSH, on 01792 404422.

Now for the contest news:

The South-East Asia 'SEANET' SSB Contest is taking place this weekend, the 17th and 18th, and ends at midnight UTC tonight, Sunday. Brief rules can be found on page 23 of the July RadCom.

The Worked All Britain 144MHz QRO Phone contest will be on Sunday the 15th of September and not on the 8th of September as previously advertised. Full details are available from the WAB Contest Manager, Graham Ridgeway, G8UYD, whose address is not correct in the 1996 Call Book. Graham's address is 6 Rosewood Avenue, Blackburn, Lancashire, BB1 9SZ.

The RSGB 432MHz Fixed Station Contest takes place this evening, the 18th, from 1700 to 2100 UTC. The rules were in last September's RadCom.

Next Sunday, the 25th of August, the fourth of six sessions in the RSGB 10GHz Cumulative Contest takes place between 0900 and 2100UTC. The rules were published in the March 1996 RadCom.

And now the solar factual data for the period from the 5th to the 11th of August, compiled by Neil Clarke, G0CAS:

Solar flux levels averaged 72, and the 90-day solar flux average on the 11th was 71 units. X-Ray flux levels declined every day and averaged A4.5 units. Geomagnetic activity remained 'quiet' and averaged Ap 6 units. Solar wind data for the period from the 29th of July to the 4th of August saw solar wind speeds up to 610 kilometres per second on the 1st and the 2nd, otherwise levels were normal at 380 kilometres per second. Particle densities declined to 'below average' at only 5 particles per cubic centimetre. Bz hovered around zero nanoTeslas most of the time.

Now the ionospheric data for Central France, for the period from the 2nd to the 8th of August. The F2 daytime critical frequencies averaged 6.2MHz, although on the 8th they were very low at only 5.3MHz. The darkness hour lows averaged 3.0MHz. The daytime highs took place at 2000 hours every day except on the 3rd and 6th, when they were before midday. The darkness hour lows took place between 0300 and 0400 hours. 11 hours of blanketing E was reported by Meudon.

And lastly the solar forecast. This week the quiet side of the sun is expected to be looking our way. The active side of the sun will be rotating into view next weekend, although its effect won't be felt until the following week. Solar activity is expected to be very low, and the solar flux is expected to be in the mid to high 60s, although it is expected to increase next weekend. Geomagnetic activity is expected to be mostly 'quiet'. The MUF during daylight hours at equal latitudes is expected to be about 19MHz for the south and 16MHz for the north. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Juliet and M1 Alfa X-Ray series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Golf series.

My understanding was that on-air content was not limited to personal matters, but that licensing was, meaning that GMRS could be used for business communications, but licenses had to be obtained on an individual basis, the grandfather clause being the only exception. Is this incorrect?

You must have caught them on a bad day or someone with a bad mic. I've listened to those guys on several occasions and they aren't makeing nearly the mess that the bunch on 14.300 are. I listened for there splatter after someone complained a couple of weeks ago. At my location I didn't notice any. What I did hear before I kicked in the next filter was quite a bit of bleed over from 14.30 and 305. These guys were kinda caught in the middle.

That day someone demanded that they go "somewhere" else and play. Easier said than done. These people are friends and are traveling all over the USA. This is the scheduled meeting place and they have as much right to that spot as the people attempting the same kind of things on surrounding frequencies.

I hope that they don't bother you as much in the future, but remember to be tolerant. They are trying to make the most of their lives, jobs, and hobbies and doing it the best way that they can.

> only view of the world?

Excuse me? Some of the best teachers I ever had ENCOURAGED
the student to question them. I think this makes the best
student <> teacher relationship possible. I've never had a
problem questioning a teacher, and quite frankly, most of them
welcome it.

This promotes independent thought and the ability to question others
(and mankinds) spin on the world.

> You remind me of W2NSD and his editorials; he doesn't know how to

> de Jack N2MPU

Yeap, at times Burt does remind me of Wayne Green, W2NSD also. W2NSD,
in his editorials in 73 Magazine, often went against the "ham radio
collective" opinion/mindset. If you were able to finish his editorial,
it often made you think and question the status quo. It appears this
is painful for many people.

----- snip -----

I have an IC-M600 I would like to modify to transmit in the ham bands.
Could someone email conversion info to me please?

Thanks,
WA1KRX

Doug

----- snip -----

You don't need any modifications. Just program the frequency as
you would any other.

Peter,

First let me say I am NOT speaking for my employer, Pacific Bell.
This is just my personal message.

That said, I have to wonder out loud about your assertion that the
phone systems didn't perform, for whatever reason, call load, or
equipment problem. Is this a fact, or just the usual assumption?

I made numerous calls from my home with no problems during the
power outage. I was in touch with Pacific Bell's emergency control
center, and with ESAC personnel who would have been called in the
event that any central office didn't provide service adequately.
Through all that, I was unable to find any report of interruption.
Not even one. We who try to provide the service take exception to
any blanket assertion that "the phones were out" or "the system was
overloaded", if it wasn't true.

The phone system does indeed have its limits on capacity. There
is no getting around that. During major earthquake situations,
the demand is just too great. To engineer a system with that
much capacity would be prohibitively expensive to the public.
As far as I was able to observe, the power outage did not present

that kind of a challenge to the system.

BTW: I'm a DCS member in LA County myself, and I agree with your assessment that DCS has proved itself again. DCS work is often boring and thankless, but these hams always come through.

>_didn't_ cause it.

Well, I just lost my mother 2 months ago to breast cancer. She was not a ham, and you could not get her to even pick up a mic. It came on suddenly and ended suddenly. Started with a small lump in Jan 95, ended in death June 96. Cancer isn't funny, nor is blaming something for causing it without proof.

I saw what my mother went through, and wouldn't wish that on anyone. I hope you have much better luck, which I'm sure you will.

Perhaps the use of an HT helped keep the cancer cells at lower level than they would have been without it?

Just a thought.

Take care..

Let's face it, both the Dems and Repubs have had their fair share of problems and crooks along the way. What started this was the posit that the Repubs were going to sell off the hams bands. My contention was that the Repubs were no more likely to do it than the Dems. And that the info put out by the ARRL was in error.

Unfortunately, that discussion turned into a political discussion (rather than any counter or refute to my original comment)which has minimal relevance (if any) in these news groups.

>I cannot get the SWR reading below 6:1.

Probably a bit late to be joining in the fray, but what are you using for insulators, most particularly the center insulator. The reason that I ask is that I recently read that some PVC compositions can be _conductive at RF_. Now that's nasty, eh? I often use PVC pipe for small antenna projects.

I can't remember where the article was, but it suggested an easy way to check your particular piece of PVC. Put a glass of water (as a "safety valve") and a small piece of the PVC into your microwave oven. Turn it on high for 1 minute. Check the PVC for any noticable warming (to the touch.) If not, repeat immediately for a second minute. If still no warming, then the PVC is usable for your antenna projects.

>the mess that the bunch on 14.300 are.

The wide open amplified mikes are awful. I'm not sure they know it. I
agree that most are OK, a few bad apples spoil the barrel. The old guys on
14.300 don't cause any problem for me with splatter.

I listened for there splatter after
>someone complained a couple of weeks ago. At my location I didn't notice
>any. What I did hear before I kicked in the next filter was quite a bit of
>bleed over from 14.30 and 305. These guys were kinda caught in the middle.

I enjoy listening to the truckers. As far as I am concerned they are using
the airwaves for a much more better reason than a lot of the junk you hear
today. (14.313)

>That day someone demanded that they go "somewhere" else and play. Easier
>said than done. These people are friends and are traveling all over the
>USA. This is the scheduled meeting place and they have as much right to
>that spot as the people attempting the same kind of things on surrounding
>frequencies.

I agree, although I think another 500hz up from 14.300 wouldn't be too
much to ask. It may be the truckers and their buying power that ends up
saving ham radio.

>I hope that they don't bother you as much in the future, but remember to
>be tolerant. They are trying to make the most of their lives, jobs, and
>hobbies and doing it the best way that they can.

No problem here. You notice I was looking for a way to ask for it without
upsetting anybody. I hate it when you try to tell somebody something
constructive and they get mad at you. There is an old guy on 14.300 who
transmits about 100hz low and sounds lousy because of it. If you mention
it he gets all upset.

Try "Dataworld" in the Bethesda, MD or Washington, DC area.
If you give them the coordinates of the site, their computer will spit it out for you.
I am not sure of their present charges and I don't have their toll-free number.
Try 800-directory assistance.
Ask for John Neff when you get through.

Nice try guys, but I might wait a while before starting construction of that
favorite "look alike" antenna. This one is DEFINITELY going to end up in
court as has been discussed on several broadcasting list severs because the
FCC is trying to preempt deed restrictions and every homeowners association
is against this. Just waiting for the fireworks to begin.

1068. READ THIS NOW!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-15 00:00:00 UTC
From: pmcdaddy@usit.net
Message-ID: <4v18hd$l35@news.usit.net>
Source record: 218902

Turn a measly $5 into $50,000!

Taking 5 minutes to read this text may be one of the best decisions you

ever made.

I could make $50 000 within 4 weeks for an investment of only $5. I

thought it was a huge joke! I spoke to my friends about it

and they thought likewise. But after three days of desperate struggle

I decided I had nothing to lose.

My family and I sent $1 by snail mail to each of 5 names and addresses

specified in the article. We then

placed our own name and address in the article and posted it in 200

other newsgroups.

Two weeks later, I started receiving money in the mail! I could not

believe it! Hundreds of dollars turned into thousands, and in the 4

weeks,

I received a total of $53,654. It came from all over the world.

If you follow the 3 steps below, there is no reason whatsoever why the

same shouldn't happen to you. This is a perfectly legitimate investment

opportunity. You invest $5 and you receive a return on your investment.

So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY

LEGITIMATE!

OBVIOUSLY, IF YOU ARE NOT INTERESTED, THEN DON'T PARTICIPATE. BUT

PLEASE

PRINT THIS ARTICLE AND GIVE IT TO SOMEONE WHO MAY WISH TO TAKE

ADVANTAGE.

The procedure is very simple.

STEP 1. Write your name and address on 5 separate pieces of paper with

the words "PLEASE ADD ME TO YOUR MAILING LIST". Fold a $1 note or money

order or bank draft in each of the pieces of paper and mail them to the

following five addresses:

****

1. Qunwei Yu, 11405 Tiverton Court , St.Louis, MO 63146

2. Nat Heatwole, 7550 Damascus Rd., Gaithersburg, MD 20882

3. Jeff Katz, 7 Seir Hill Rd, #41, Norwalk, CT 06850

4. Eric Johnson 14817 Holden Circle, Horizon TX, 79927

5. Patrick McElroy 818 Hollow Creek Dr. Newbern, TN. 38059

****

STEP 2. Now remove the 1st name on the list, move the other 4 names up

(5 becomes 4, 4 becomes 3 etc) and put your name and address as number

5 on the list. You can do this by re-typing this article or simply

editing and re-posting it in this or another newsgroup.

STEP 3. Post your amended article to at least 200 new groups (there are

17 000 of them).

You are now in the Mail Order Investment Business and you will start

receiving $1 returns by mail within a week or two. The more newsgroups

you post to, the bigger your return will be. You may want to rent a

Post

Office Box to handle the volume of mail you are likely to receive.

If you wish to remain anonymous, you can use a pseudonym such as

"The Manager" or "The Investor", but make sure your address is correct!

NOW LET ME TELL YOU WHY THIS SYSTEM WORKS!

Of every 200 postings I made, I received an average of 5 replies, YES
-

ONLY 5, each with a $1 bill enclosed. You make $5 for every 200

postings WITH YOUR NAME AT NUMBER 5.

Each person who sent you $1, now also makes let's say,only 200

additional postings WITH YOUR NAME AT NUMBER 4, i.e. 1000 postings.

On average therefore, 50 people will send you $1 with your name at

number 4. You make $50.

Your 50 new agents make 200 posting each WITH YOUR NAME AT NUMBER 3

or 10 000 postings - average return 500 at $1 each is $500. They

make 200 postings each WITH YOUR NAME AT NUMBER 2 = 100 000 postings

= 5 000 returns at $1 each = $5 000.

Finally, 5 000 people make 200 postings each WITH YOUR NAME AT NUMBER
1

and you get a return of $50 000 before you name drops off the list.

AND THAT'S IF EVERYONE DOWN THE LINE ONLY MAKES 200 POSTINGS! Total

income in one cycle = $55 500.

From time to time, when your name is no longer on the list, you take

the latest posting that is appearing in the newsgroups, SEND OUT

ANOTHER $5 TO THE NAMES THAT ARE ON THE LIST, PUT YOUR NAME IN

AT NUMBER 5 AND START POSTING AGAIN. Remember, 200 postings is only

a guideline. The more you post, the greater the return.

Let's review the reasons why you should do this: THE ONLY COST
FACTORS

ARE 5 STAMPS, 5 ENVELOPES, AND 5 $1 BILLS. Anyone can afford five

dollars to put into such an effortless investment with SPECTACULAR

RETURNS.

Some people have said to me "What happens if the scheme is 'played

out' and no one sends me any money"? Big deal! So you lose $5 - but

what are the chances of that happening?

Do you realise how many Internet Users there are? Do you realise how

many times this scheme can be utilised over and over again - with COMPLETELY NEW people participating?

There are not HUNDREDS, NOT EVEN THOUSANDS, BUT HUNDREDS OF THOUSANDS OF NEW INTERNET USERS EVERY MONTH!

Remember, read the instructions carefully and play FAIRLY...that's the only way this will work. Get a printout so you can refer back to this article easily.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroup postings to make sure everyone is playing fairly. You know where your name should be.

1069. Mr Happy should be happy SOME of the time.

>from anyone that the telephone system was not working as planned and
>designed.

[snip]

Well Pac Bell better get to work in Torrance and fix that stuff. Sounds
like its all screwed up down there. ;)

Now seriously...

I was not in southern California but the lights went out here in the San Francisco area too. I was driving and didn't know anything about until a local radio station started giving initial reports of a masive blackout effecting the entire state. It was then that I noticed dead traffic lights as I crossed surface streets on the freeway.

I had paged someone from my cell phone (it worked) and she called me back from a pay in a powerless area. No problem. I made four or five other calls and received two pages. The calls had nothing to do with power failure - it was just business as usual and, "hey by the way, is your power out?"

Aside from Peter Coffee's press release, I heard no news reports of telephone service failures. Pac Bell has reported that their wireless network functioned without skipping a beat. And I can tell you that people were able to use tehir phones to call and page me.

While not trying to berate what the hams were doing, I don't think the public telecommuncications networks suffered near as bad as it was alledged.

However, I have my own theory that since the blackout occured on a Saturday, there was not as high a demand on the telephone system as there would have been during the business week. I figure most people didn't care enough about the power outage when they planned to BBQ, swim in the pool, or as I was heading out to do - sit on the aft deck of a friends boat at the Solano Yacht Club for the evening.

Pac Bell, AT&T, Cellular One, and the other similar carriers did not appear to let many people down - if any at all.

I think you mean "freebanders", not "sidebanders". Use of single sideband
on CB frequencies is perfectly legal. If you mean the people who are

operating above and below the assigned 40 channels, then you mean "freebanders".

I agree with you about the FRS. These units are intended for very short range. In most cases they will get less than 1/2 of a mile of range. Yes, there are situations that will permit communications of many miles between FRS units. If one unit is on top of a 30 story building or on a mountain and the other is 15 or more miles away, you will still be able to talk. If both units are in and around buildings, the range will be only 1/4 of a mile or less. Either way, the FCC is not going to put out money to hire somebody to sit in your neighborhood to make sure that the FRS users obey the law.

Gary,
I apologize for nor explaining in my original post that I have four
phone lines. One is a fax, one is the data line, and two are voice lines.
I made only one "is your power out" call, to inquire about my
mother-in-law's health with her air conditioner out. That was the ONLY
local call I made within my telco exchange. All other outgoing calls
were either "real" long distance or into the Sacramento exchanges.
I hope this answers your concerns about what I was doing when the
power was off. By the way, I was alerted to the power outage by a call
to my cell phone (on Airtouch) from my home alarm system and I
high-tailed it home to work on trying to restore the PacketCluster backbone.
Again, I am aware of ***NO*** Pac Bell outages during the power
failure that could be attributed to the power failure.

I have tried to use pin-11 on the rear accessory connector
on the back of my Motorola Spectra to get low-level audio
out of the receiver to no avail. This is a dash-mount unit.

I see in the book where pin-11 is specified as "SP customer
applications",
so I wonder what I must do to get the audio to come out
of pin-11. Is it programming or a jumper or what?

Thanx in advance!

>
> Tell dad to adjust the audio, he'll know what you mean :-)

make sure that the TNC is wired correctly and that you are going to the
front of the radio at the tnc port..look in the manual for the radio and
you will also find that there is a setting for 9600 packet that must be
turned on for it to work..all levels can be adjusted with the TNC unless
there are greater problems with radio..good luck .. as a side note I
have used KAWIN with my 9600 packet and it does a great job!

Hi,

I would like to be able to plug my tv/cd/tape player
into the phono jack on my stereo receiver. I was
wondering is anyone would know where I could get such an
adaptor or how to build one.

If this isn't the right newsgroup please point me
to a better one.

Best regards and many thanks.

Sincerely,

Matt B.

Well, it is that time again! It is Hamfest Season, and it is time
for the annual Duke City Hamfest! Here is all the information:

WHEN: Saturday, August 17th - Sunday, August 18th
TIMES: 8:00 AM-5:00 PM (Saturday), 8:00 AM-2:00 PM (Sunday)
WHERE: National Guard Armory, 601 Wyoming NE, Albuquerque, NM
(Near Wyoming & Copper, on east side of Wyoming)

* * FEATURES * *

* VE Testing (Saturday at 1:00 PM) * Outdoor Tailgate Swapfest
* Hourly Door Prizes * Grand Prize Drawings
* Search & Rescue Forum * Contests
* On-Site T-Hunt * ARRL Forum
* MARS Forum * AMSAT Forum
* RV Parking (Sorry, no hook-ups) * QRP Forum
* ATV Demonstration

* PACKET FORUM - Information, plus the start of NM's Packet Users
Group!!! Please sign up!

TALK-IN FREQUENCY: 147.15 (+ No PL) Repeater

* * PRIZES * *

Grand Prize: Yaesu FT-840 HF Transceiver
Second Prize: Alinco DR-150 2 meter mobile
Third Prize: Alinco 2 meter HT

* * PRICES * *

Tables without Power: $10.00 each
Tables WITH Power: $15.00 each
RV Parking: $10.00 per Night
Raffle Tickets: $2 each, 3 for $5

See everybody there!! Please E-Mail me if you need any information
before the Hamfest. Or call Judy, KC5HZE (Hamfest Corrdinator) at
(505) 891-9132 .

>the HAAT of a repeater site? Is their something on the web or is their

Well, you could buy a USGS topographic map of the site, draw 8 radials out from the site for 10 or so miles, plot 4 or 5 points on each radial and note what contour lies under them. Now you simply average all the points.

No spiffy computer graphics, but it works. I did it for our house, but only going out 1 mile... 75 feet below average terrain!

Perhaps, but PE has very low loss to begin with. Among plastics, it's one
of the lowest loss dielectrics you can get. PVC, on the other hand, comes
in a wide variety of formulations, with fillers for color and probably
to modify other properties as well. But I haven't yet seen PVC with
appriciable loss at HF.

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

I have a Kenwood TH-79a that i am not using, I would like to sell. I bought it in May/96 and its basicly sat around doing nothing since then. I have forsale with the unit a speaker mic,leather case,extra battery,dry cell battery case and a extra rubber duck antenna. I am asking $400.00 or best offer and i will pay shipping in the USA.

Thanks.....

1093. PK-232 and Win95

Thank you for reading this:

I understood there was a shareware program out there to run the 232 with Win95.

All my searches have turned up negative.

If anyone can help via Email or a posting to the Newsgroup,I would appreciate
it.

Thanks in advance,

Does anybody out there know how to modify the Kenwood TR9000 all mode vhf transceiver to work outside the lower band limie of 143.90? I want it to go down to the NAVY Mars freq digipeater here thats on 143.7 but dont know what modification is required to let it xmit down there. I have the manual but too dumb to figure it out myself.

Here is a summary of news items covered on edition #177 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 23-Aug:
-
1. ARRL/VEC to Provide Free Electronic Renewal Filing to Members
2. Central States VHF Society Honors Tom Clark, W3IWI
3. More Time Needed to Update Exams Says ARRL in Emergency Filing
4. First Digital ATV Contact Achieved on 1290 MHz over 3 Mile Path
5. Weekly Propagation Forecast
6. "Ancient Amateur Archives" with Bill Continelli, KE2XB
7. US Senator from Wisconsin Seeks Local Enforcement of CB RFI
8. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
9. Special Event Station Calendar
10. Launch of Mexico's UNAMSAT Delayed Until Early Next Month
11. "Proceedings" Book from AMSAT-UK Colloquium Now Available
12. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from Dana Rodakis of St. Petersburg,
Florida, and the AJ1R repeater system, serving Florida's Sun Coast
on 51.84, 145.230, 147.285, 442.075, 443.625, and 443.95 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.

Hi Rik,
What would these truckers be saving ham radio from? Our HF bands are not under attack and are as safe now as at any time in the past. We gained new bands during the last decade, and the government is considering giving us even more.

You mention truckers' buying power. Are you implying that they'll keep the Big 3 radio makers in business? Not to worry, for if you look at the commercial line those 3 produce, you'll see their ham models appear very similar, and there is no indication their commerical sales are leveling off. Besides, if the amateur radio manufacturers stopped sales we'd have a resurgence in home building. And that would be *very* good for amateur radio.

>couple of lights, couple of fans, maybe alternating
>fridge (1 hour on) with room air conditioner (3 hours
> on). Field day once a year, emergencies other times.

Honda, Yamaha, and Kawasaki make good quiet portable
generators in this size range. But unless one man
portability is paramount, I'd suggest you consider a
larger generator. A generator that is too big is lots
better than one which is too small. A 4 or 5 kW generator
is a better size for home backup. It will handle the
starting surge of motor operated appliances much better
than a unit which is barely big enough. It is a bit
more difficult to carry out to Field Day, but you can
still do it with a bit of help. Avoid units like the
Coleman which use Briggs & Stratton engines. Get something
with pressure lubrication.

The next step up is the 15 kW range. These generators
can be trailer mounted, and will easily run the whole
house. Here you should look at diesels like the China
Diesel units as well as water cooled multicylinder gas
engined units. If you have a small tractor, get the
15 kW generator sold by WW Grainger for mounting on
the 3 point hitch and driven off the tractor's PTO.
This is the best option if you have a small tractor
because it is *much* *much* cheaper, and the tractor
is designed to run under load all day long.

A good rule of thumb is that you need 2.5 engine
horsepower for every 1 kW of electrical power. So
the PTO driven generator above will work on the
small Ford, Kubota, or Belarus tractors in the
40 hp range as well as on larger John Deere and
IH Case tractors.

You can even run it off a truck if it has a PTO off
the transfer case, but speed control can be a problem
since few trucks have the proper governor, and you'd

have to rig up your own mounting. (I've seen this done, using a modified cruise control to maintain engine speed. It works well, and you've got your generator with you wherever you go.)

>Need to put some stabilizer in the remaining gasoline?
>Gas here in California is bogus with the new formula.
>
>Have heard, "Store 5 gallons of unleaded. After 3 months
>mix it into car gas, replace with fresh."

Yeah, if you don't run it often, don't leave gasoline in the generator, and rotate your stored stocks often. Old gas develops varnish which can really gum things up in the fuel system. If you opt for a diesel, fuel storage is much less of a problem, though you should add a bit of algacide to the fuel since there are things which can grow in diesel. You don't need to drain fuel from a diesel generator, and in fact you shouldn't. The fuel will protect the injection system from moisture and corrosion. Needless to say, stored diesel is less of a fire hazard as well.

>Check oil every tank of gas I assume. Change it once a
>year or if especially dirty, sticky?

Your generator will have a specification for oil changes after X number of hours of operation. Do that when you are running it often, but change it once a year even if you haven't run up enough operating hours to warrant it. Motor oil becomes acidic after a while, and can damage engine components.

This brings up another point, if your generator doesn't come with a running hours meter, be suspicious of it as something to depend upon. Any quality unit will have a proper hours meter, and voltage and current metering as well. The better ones will have a frequency meter too. (You can retrofit the electrical metering, but a manufacturer of quality engines will supply the hours meter as part of the basic package.)

>Probably, one wants to ground the generator, and run a
>power cord into the appliances unless an electrician
>has installed a double pole double throw switch on house
>and I have the intelligence to shut A/C, range, oven,
>and most lights off?

Yes. Don't try to backfeed the house with a suicide cord (an extension cord with male plugs on each end). This is very dangerous, especially to any linemen working on the power grid. If you want to use the house wiring, and that *is* best from a safety POV, then have an approved

transfer switch installed by a qualified electrician. Such
a switch makes it impossible to interconnect generator and
grid, no matter what you do on the house side.

But if you are using a small portable generator, extension
cords direct to what you want powered is a very good course.
Use gaffer's tape to tape down the cords where anyone might
walk. You don't want members of the family tripping over them
in the dark.

>help appreciated!

Congratulations, Grady. With your current license class, you can talk
to people very far away using 6m or via satellite using 2m and 70cm
equipment. The latter usually requires good gain antennas though,
so would normally be restricted to home operation (though I know some
folks who work satellite from the car).

At the present point in the sunspot cycle, 6m is very sporadic, so
you can't count on finding a distant station every time you operate.
But that will change over the next few years as the sunspots heat
back up. Globe spanning contacts are possible now (if a bit rare),
and will become common in a few more years. Of course the satellites
have fixed and very predictable operating times dictated by orbital
mechanics. You'll know exactly when and where they will be available.

To talk to people somewhat less far away, you can work tropo on
2m (and 70 cm). It is often possible to contact people a few
hundred miles away using tropo. There is a whole subspecies of
ham who does little else. They are the VHF weak signal crowd.
You'll become very familiar with weather patterns if you decide
to do this. Frontal boundaries can *duct* your signals for
hundreds or thousands of miles.

You can also do meteor scatter and auroral contacts using the
ionization provided by neteor trails or the aurora to bounce
your signal to stations thousands of miles away. And you can
even bounce your signals off the Moon (called EME) for radio
path distances well beyond anything possible on HF.

To do any of those things, you need equipment called "multimode".
That is, the equipment will work SSB, CW, FSK, or FM. There are no
handheld radios in this class. For some of these things you'll
also want more power than a HT can muster. 100 watts is commonly
used, and for EME, 1.5 kW is usually the rule. That extra boost
is usually gotten with an external amplifier, driven by a multimode
radio. (Note, I don't know of *any* case of EME being done mobile

by amateurs, though the military did it in the 1950s.)

For local chatting, FM is the mode of choice, and use of repeaters is pretty much the rule. For this, a FM only radio will suffice, and all HTs are FM. If you have a good repeater nearby, the HT alone will suffice, but in the more usual case you'll want to be able to run more power and use a better antenna. You *can* kludge this up with an external amplifier and antenna for the HT, but that's usually very unsatisfactory. That leads us to the "mobile" rigs (I put mobile in quotes because these same radios are also used at home with a 12 volt power supply). There is a wide range of choices in these rigs, they are very popular, so you can find nearly any feature you may desire.

The most important feature is a receiver free from spurious products, often broadly called *intermod* among amateurs. This can be a problem because as you travel around your radio will be assaulted by strong signals from other services, most notably high power paging transmitters. It is pure torture to listen to a radio which constantly squeals and squawls due to intermod. Unfortunately, the trend to make FM amateur radios double as scanners has made this problem much worse. HTs are very prone to this problem because the things a designer can do to fix it conflict with the need for small size and low power consumption. Mobile rigs are better, some very good, some not quite so good.

Most FM radios either come with, or can be fitted with, a Touchtone (TM) pad. This is a pad like the one on your phone which generates the tones used by the telephone system. If there is a local repeater with a *phone patch*, you can use the TT pad to make calls (if you're a member of the club supporting the repeater, generally non-members aren't given the access codes). This isn't quite the same as cellular phone. The conversation will be half-duplex, IE you have to push the transmit button to talk and release it to listen. This can be disconcerting for non-amateurs on the other end of the call. You also generally can't *receive* telephone calls, only originate them. And the rules limit what you can say on the patch, generally non-business calls only (at least it can't be related to *your* business). Of course when you drive out of range of the local repeater on which you have patch privileges, you're out of luck. Having a cellphone in the car is still very much a necessity. Consider phone patching something you do just for fun, or for those rare emergencies when the cellphone system doesn't work.

Now lets consider what you get if you upgrade your license and learn Morse. If you learn 5 WPM, you get part of 10m for voice, and small segments of lower HF for Morse. 10m is much like 6m now, with distant contacts being sporadic. As the sunspot cycle heats back up, it will become the main long distance band, though 6m will also be very active. With only a few watts power and a simple mobile antenna, you'll be able to work the world.

The Morse segments you'll gain won't be of much use to you mobile, unless you're the rare person who can handle mobile Morse. But they will provide long distance communications right now for your use when stopped (at home or elsewhere). If you find you like Morse, this can be fun, but 5 WPM is horribly slow, and you won't be able to say much to others. (Consider that normal speech is about 120 WPM to put this in perspective.)

Now if you pass the 13 WPM test and get a General or Advanced class license, HF operation really opens up to you. You'll be able to operate voice on 20m. This is the workhorse band of international contacts now, and will only get better as the sunspots increase. You'll also get 40m voice, which is good for continental contacts now, and the 75m band which, while difficult to do well mobile due to the difficulty of making a mobile antenna efficient on this band, is the main band for regional communications. (There are other HF bands too, and each has its features, but for now you'll find most useful the 75m, 40m, and 20m bands. When the sunspots start to heat up, 15m will become important, and if you like Morse or other digital communications, 30m is useful right now.)

If you push on to 20 WPM and the Extra class license, you'll get some more small exclusive segments of HF to use as well as everything the General and Advanced get. You get nothing major that's new at this level except the ability to operate a station while *in* space. The FCC has so routinely waived this requirement for astronauts, however, that it is really moot. You also get to administer the 20 WPM and 13 WPM code tests to others if you opt to become a volunteer examiner. The main reason to get this class license is simply bragging rights.

Now besides voice and Morse operations, there is also a world of digital operations available to you at VHF+ and at HF. Most common on VHF+ is packet radio. This allows your computer to exchange information with other amateurs' computers, often through a network of relay sites. While most of the operation found here is still slow (1200 baud), and the network isn't fully fleshed out, there are still lots of things to do. In some areas it is much better, with amateurs operating at much higher speeds, 9600 baud or even 56 kb. At 56 kb there is a qualitative difference from other packet operations which has to be experienced to be believed. Internet style applications become practical at this speed.

For 1200 baud operations, any FM radio can be pressed into service. For 9600 baud, you must be much more careful in selecting the correct radio (and many of the radios which *claim* to be "9600 baud ready" really are NOT). Ask for help. At 56 kb and above, you need specialized *RF modems*, which are both radio and modem,

optimized for data use. A word of advice, if you are interested in packet, don't try to make your regular voice radio do dual duty. You really need to dedicate a setup to packet full time to get the most advantage from it.

HF digital operations is a completely different world. Packet doesn't work well there, so other methods are used. Popular methods are called Clover, PACTOR II, PACTOR, GTOR, AMTOR, and RTTY. This is a minefield, walk carefully and *ask* for help. Things are evolving rapidly here. It is exciting, but it is also easy to jump in on the obsolete tail of an older paradigm. The potential of HF digital is vast, but realize that you'll be on the cutting edge, and can get sliced up if you choose unwisely.

Some amateurs do operate the digital modes mobile, I do, but many restrict this activity to home stations. One of the advantages of digital is that it works well with low power and restricted antennas. It is also the only amateur non-realtime mode, IE you can leave it to do its thing while you do something else, like drive. When you check it, it will have sent any outgoing messages and retrieved any incoming messages automatically.

There are other things you can do in amateur radio too. For example, with your current license you can do ATV (Amateur Televison). This is regular full color and motion TV like the broadcasters use, but adapted to two-way communications. Some people do this mobile, and from radio controlled aircraft or balloons. The view from 100,000 feet is spectacular.

On HF, there isn't enough bandwidth to do ATV, so we use SSTV (Slow Scan TV). This fits in a voice bandwidth and transmits a picture every few seconds. It is fun to actually see what the other fellow on the other side of the country (or the world) looks like. We can also do FAX, which is similar to SSTV, on HF. This lets us exchange drawings of antennas or circuits.

There are a world of different things you can do in amateur radio besides just talk (though that's important). You can do many of them now with your current license. You can do more (on HF) with a higher class license. There's little chance to get bored because you can always find something new to try. For example, I haven't mentioned foxhunting. That's a competitive sport done with radio direction finding equipment. And if you go in for that sort of thing, there are a huge number of awards, plaques, and certificates (known as "wallpaper") you can compete to get, for activities ranging from Dx contesting to emergency and public service operating.

This is one of the methods accepted by the FCC too, but with one
caveat. If any of the points fall on an unusual terrain feature,
you're allowed to move the point off that terrain feature. This
method works acceptably well in moderate terrain, but if the
terrain is rough, actual horizon contours need to be plotted.
That's a job best left to computer.

Gary

FROM W6GO:

Having read all that, I call for anyone who was not able to make a
telephone call during the power outage to step up and be counted.

I agree with AC6VV. My power was out 4 hours and 39 minutes. I made
over 20 calls during that time, both local and long distance. I received
at least 10 calls during the outage. At no time was there any indication
of a problem with the telephone service or network. EVERYONE I talked to
on these calls also experienced a power outage. There was no indication
from anyone that the telephone system was not working as planned and

designed.

To cut down on the flames... Yes, I retired from PacBell in 1985, and yes, I was responsible for providing technical guidance and support at a corporate level to those who sized and designed the network AT THAT TIME. We did the best we could then, and in my opinion, even with the major changes to the industry since I left, the job of providing a telephone system that will handle (minor) emergencies such as the recent power outage is still being done. This is not intended to denigrate the Amateur radio communications that are **VERY** necessary in a **REAL EMERGENCY**, not the minor inconvenience of a few hour power outage.

>
>73's
>
Tools required: A good topographic map, (7.5 minute series
preferred), a compass (circle drawing tool), and a ruler.

Locate the repeater site on the map. Draw rays out starting at the
horizontal (zero degrees) and proceed every 45 degrees. Now make 5
circles, with radii of 2, 4, 6, 8, and 10 miles using the map's scale.
Set the center of the circles at the spot on the map that represents
the repeater site.

Now, you have 5 circles centered at the repeater site, at distances of
2, 4, 6, 8, and 10 miles. For EACH of these circles, there are 8
locations where the 45-degree rays intersect. If not, make the rays
from step 1 long enough to reach each circle.

This gives you 40 points, not counting the center (tower site). For
each point, note the elevation as best you can with the topographic
map. Write them down. Add these 40 numbers together, and divide the
sum by 40. This will give you the average ground elevation (let's
call it "A").

Next,, look on the map and get the elevation for the repeater site.
Add to this the height above ground of the antenna. This gives you
the elevation of the antenna, and we'll call it "B".

Now subtract "A" from "B". The result is is the height above average
terrain for the antenna.

This is the method recommended by SERA, the SouthEastern Repeater
Association, the organization through whom repeater coordination is
done in several southeastern states.

Have fun!

> Grady
>
1st Congrats. and well done
Now to answer your questions.

A handheld is nice, but you are limited to output power unless you invest in an amp. Also, the wires
to get the thing running will always be in your way.

A good 2 meter mobile (either new or used) will serve very nicely, especially
if you are mobile alot. In the home, you need a power supply and an antenna as well.

most radios will allow you to use a repeaters phone patch to make calls, BUT you usually
must join a club to be allowed that priviledge.

Speaking of clubs, they are probably your best source if information, so look into them.

Far away talking is a relative term. To some, 30 miles is far way and your license will allow
you to do that regularly,

To talk to the other side of the country or world is a different matter. Now your in the HF bands and aside
from a great deal of different equipment, you will need at least 5WPM.

feel free tp e-mail me with any questions, be happy to answer them

have fun

steve

I dunno what you mean here but there were NO telco difficulties in Pac Bell areas, especially here in San Francisco. Perhaps the same in GTE areas in CA. During the power outage, I was in convo with a friend in San Rafael and we were commenting specifically about how well telco kept operating.

In SF, we experienced total power loss for 5 hours. San Rafael fared a bit better. The surprising part was that Sausalito experienced no power outage. I know because I maintain a hi-power FM broadcast transmitter there on Mount Beacon. No outage at all! EVEN with the telco connection to the TX site.

So Jug, what's your point??? Cell phones ....not particularly mentioned.

The sad part is that a radio would need this at all.
If you can't figure out how to switch from memory mode to VFO mode in less than about one minute, without looking in the book, the radio's useless IMO.

Congratulations, Grady, on your entry into the wonderful world of Ham Radio! Your questions have already been answered by others.

Being able to access the world regularly requires operation of the HF frequencies. Therefore, you need to work on your code. Below, is the URL of my newest release of a Morse code tutor program for windows. Hope you'll download it and give it a try.

http://www.simtel.net/pub/simtelnet/win3/ham/imcpw311.zip

Below are its major features:

Morse code tutor for Windows 3.1 & Windows 95. Excellent for learning and maintaining one's Morse code skills. Has a code speed of 3-50 wpm and a character speed of 3-50 wpm for Farnsworth code. Includes comprehensive help facility, main menu and popup menu, and eleven code practice lessons. Fully customizable from the Options menu. Sound card not required. Requires 692K of free hard disk.

>couple of lights, couple of fans, maybe alternating
>fridge (1 hour on) with room air conditioner (3 hours
> on). Field day once a year, emergencies other times.

The 2500 watt Generators (such as Coleman etc.) won't
handle an airconditioner. And will only just barely deal with
a refridgerator. The Briggs and Stratton's you see at Home Depot
and other places are not really rated for full load, or continous
opertaion. And are noisy as all get out too.

>Need to put some stabilizer in the remaining gasoline?
>Gas here in California is bogus with the new formula.
>Have heard, "Store 5 gallons of unleaded. After 3 months
>mix it into car gas, replace with fresh."

It depends on what you buy. Anything from Arco will eat the rubber
parts. Considering the need/use/purpose of you generator, buy either
Chevron or Mobil Supreme (92+ Octane) gasolene for fixed small engines.

I've stored these gasolenes for over a year with no problems. But I
do rotate through the vehicles (when I remember). What is more important
is to cycle the generator at least every 2-3 months or so for an hour.

>Check oil every tank of gas I assume. Change it once a
>year or if especially dirty, sticky?

Actually, the manuals read "Every 100 hours" or more if dirty.

>Probably, one wants to ground the generator, and run a
>power cord into the appliances unless an electrician
>has installed a double pole double throw switch on house
>and I have the intelligence to shut A/C, range, oven,
>and most lights off?

The most common method is to use a double ended male cord. This
is only remotely safe if you remove the main fuses or shut off the
main breakers AND LOCK THEM OFF. Nothing will get you in more trouble
faster than knocking a lineman off the pole down the street or watching
your generator attempt to phase correct tothe grid when the power comes
back on line.

The "correct" method is a transfer switch. Automatic ones cost about
$3500 for a 50-150 amp single phase system. American Honda sells a

manual one with 6-8 toggle switches for around $400.

Speaking of American Honda, (shameless plug follows.) Their ES-4500
generator will run 4-6 hours on a tank of gas, and is VERY quiet as
it is fully enclosed. The price is about $2500 or so. And for an
additional $300 you get the remote control, and $400 a transfer switch.
This works out to either a 30 amp continous 120 VAC load or (roughly)
15 240 VAC load. I bought mine originally to run a 32 foot travel trailer.
It has worked faultlessly to provide power at the house now that Edison
seems to have problems with keeping the infra structure together these
days.

Speaking of emergency power, Deep cycle marine batteries work well with
a few 120 VAC inverters as well to run the station equipment and so forth.
Just look to spend a couple hundred on a decent charger to keep the batteries
topped off and not cooked. After all, white plates and no electrolyte won't
do you any good when you need them. Stat-power (Canada) makes excellent
marine standby shorleline chargers.

>Thanks for your experience, ideas, etc.

>Scott Jura sjura@cybergate.com WB6ZLA

Remember, you're setting up an emergency power supply system, not an
exercise in how much money you can save to find out you cut too many
corners when you really need it.

Grady,

Welcome to amateur radio. One avenue to the world that is open to you
with your new license is satellites. AMSAT maintains a web page at
http://www.amsat.org browse around there. All the amateur satellites
are open to you including the new Phase 3D which will be going up next
year. Currently there is an FM satellite that can be worked with a
Handi Talkie and a hand held beam. If you get interested in satellites
there are a number of us from AMSAT who would be glad to help you,
perhaps someone right in your home town.

How did you abuse my sig block?
Anyone who is civil to me becomes a marked person by other users.

Thanks for the email Burt.

I take threats of physical violence very seriously, Burt. What will you do to me?

1120. The problem with Amateur Radio.

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-16 00:00:00 UTC
From: dg198@FreeNet.Carleton.CA
Message-ID: <4v1qsq$qi2@freenet-news.carleton.ca>
Source record: 218832

I think the big problem with Amateur Radio is that it is open to all people of the world and is free from visual stereotypes and prejudices that people have when speaking face to face with someone.

It is a great equilizer.

If a person wants to hate or spread biases, it is difficult because you never know the cosmetics of the person to whom you are addressing.

It is a wonderful hobby. And anyone who participates in it should be proud that they can interact with others without the securities of all their prejudices. Anyone who treats it like a proffession should find another job during the day.

Phonetic Alphabets (Alpha Bravo etc)
August 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Chinese and
Esperanto.

This posting supersedes the one of 4th July. Notable this
time: alphabets for Kwanyama and Ndonga.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or specific references
where I have only second-hand information.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest; in the case of Web pages I ask that care be taken,
as it is easy to mangle something. Note that there is also a
brief version of this collection.

Following discussions last year this article is not now
posted to alt.usage.english. As of 10th April it is now
crossposted to various *.answers groups.

You may find a copy of this article and some other material
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:
```

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms]

[UK police use Indigo(??) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet had: Alfa Coca Metro
Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase book for
Spanish speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway
Ontario/Ocean Pacific Quebec Radio Santiago/Spain Tokyo
United Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,

Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

Howdy Bill
I participated in the SD Power Out Net from beginning to end and thought it went very well under the circumstances. Real time emergency nets can appear to be somewhat disorganised due to the sheer volume of traffic, however I feel this net performed extremely well. Positive points:

1. Major traffic snarls were reported so mobiles could choose alternate routes. Traffic advise was offered regarding how to treat disabled traffic signals, points of off ramp congestion, and locations of accidents.

2. Cautions were issued regarding potential computer damage -- I know of several folks who experienced damaged computers as a result of not shutting them down after the initial power loss. Several surges occurred after the initial loss -- not good for silicon devices.

3. Several low-fueled mobiles were directed to available filling stations with power.

4. Several cautions were issued to turn off all unecessary appliances including Ham Gear -- one local station had severe damage to his Ham gear after a momentary surge.

5. The net had information of the scope of the outage both local and across the western US. Much better than any single local radio station that I tuned in.

6. Some phones were out in San Diego, this was reported as well as power outages. Listeners were advised to check on elderly folks and relatives who rely on phone communications. Folks with oxygen generators may have required assistance. Some mobiles revised their travel plans based on this information.

7. Frequent notices were issued regarding estimates of the length of outage so folks could take appropriate measures.

8. The Palomar Repeaters are located in North County, so it was not surprising that the majority of reports were issued from same. A quick tune of the other 2M frequencies showed many other frequencies in SD concerned with the power blackout.

All in all I think the SD Amateurs performed extremely well, the net was well directed, well disciplined and well informed. There is always room for improvement - certainly.

The net was fully prepared to interface with civil authorities should that have become necessary. One of the net participants checked on that several times during the outage.

I listened and reported during the entire net and heard the missed Spring Valley report, but I felt there was ample opportunity for a later report. A minor point considering the magnitude of information processed.

I found the net had a better handle on the status of the power outage than any single radio station that I tuned in to, the biggie AM radio station here was selling vitamins during the entire affair!!

Jay,
You sure was busy > 30 phone calls in 4hs 39min
Hummm lets see.. that is about one call every 10 min ..
Were these call emergency in nature?
Maybe you were making calls all local to your serving co that did
not rely on using the inter machine trunks
No wonder why the phone company want us to pay by the call and on a
meter basis...
One call every 10 min.. Jay it was only the lights that went out
relax.. dont call all of your friends to see if they have electric
save the resources for the REAL EMERGENCIES.. and last but not least
Take a DIP ! but dont let your fingers do the walking :-)

Any petroleum product will deteriorate rubber, not just certain
brands. That is why "rubber" fuel lines are actually made of neoprene.
>

Running the generator (or any internal combustion engine)
periodically is good advice.
>>Check oil every tank of gas I assume. Change it once a
>>year or if especially dirty, sticky?
>
>Actually, the manuals read "Every 100 hours" or more if dirty.
Very few generators intended for home use have hour meters and the
user generally cannot track hours reliably. Once every six months
should be adequate if the generator is not used on a regular basis. I
perform maintenence on mine (5Kw, 41.7A@120VAC/20.8A@240VAC)
every 90 days as the timing coincides with my maintenence period for
my automobiles. If the generator is used over an extended period, ie
FD, maintenence is performed when the unit goes off-line.
>
>>Probably, one wants to ground the generator, and run a

>back on line.

Double ended male cord? Don't even think about it! Contact a licensed
electrician and have that person wire at least a DPDT switch between
the generator and the main circuit box. This is the bare minimum
needed for a safe installation.
>
>The "correct" method is a transfer switch. Automatic ones cost about

How and where is shortwave radio being used in primary and secondary schools? I understand it is seen as an active, "here and now" tool in increasing the student's grasp of world events, etc.

I'd like to contact educational types who are active in this laudable endeavor. Any clues? Thanks.

>>Origianl post deleted to save space and time spent reading it <<<<

Regarding the comment you highlighted that was representative of two thoughts

Firstly, regarding systems adjacent to the ham bands - I was specifically thinking of the county-wide multi use system here in Suffolk, where RACES officers are given county identifers for use on the system.

Secondly, those occasions where asked to use a particular frequency agencies such as the Red Cross and the local ambulance frequencies come to mind.

Interant frequencies are often used by CAP ground personnel during shelter operations.

The examples given here are never life and death, but its handy to know that you can communicate in these services.

Then you could also become licensed for Maritime or GMRS.

The point is I should not be questioned or have to justify myself to anybody. I don't think that an ARES/RACES card means much to somebody unfamiliar with ARES/RACES, I know what it means in my neck of the woods.

I'm not a cop wannabe, or Junior G-Man.

I know I've been there before as an emergency worker (volunteer fireman) And I know how to act with responsibility and how to make the amateur service look good, not like a bunch of junior G-men or cop wannabes.

Fire, Rescue and Emergency services in this county have permanently assigned ham ops to man the county EOC communications. RACES personnel are issued Motorola "Spirit" voice pagers as are members of the fire and ambulance services.

The situation may be different in your locale, I know what is here.

Coincidently, (sp?) in the August issues of QST and CQ you can read about one of the recent activities are here the wildfires of 1995.

Enough about me, there must be dozens of hams out there who are members of a DMAT or the ARS in Ca. or many other fine amateur groups who can tell you more.

How about volunteer firemen who use their ham gear for their part in the fire service ?

So, whats ARES/RACES all about in your neck of the woods ?

I and quite a few other people would be very interested if anyone actually finds RF-conductive PVC. If anyone does, please post it!

Many years ago, a well-known writer made a 160-meter antenna loaded with a long coil wound on a piece of PVC pipe. The coil melted when he applied a kW, so he wrote that PVC was lossy at RF. It turned out that the PVC melted because the wire got extremely hot due to plain old skin resistance. (The coil had lousy Q and a whole lot of current.) The myth persisted for years, though, and might even be the source of your information. (I don't believe that a retraction was ever printed. Like several well-known writers, he wasn't known for publicly admitting mistakes.)

Note that while material which passes the microwave test will be fine at HF, some materials which fail will also be fine at HF.

(I see that this was posted to a large number of newsgroups. I've limited my response to rec.radio.amateur.misc and rec.radio.amateur.antenna.)

I have read that polyethylene losses at higher frequencies are due mostly
to hysteresis effects in the dielectric molecules caused by the
oscillating electric field, rather than by RF conductivity.

First of all thanks for reading this message. I am a disabled ham, I want to get in contact with a ham that has performed the mod to the FT-530. Hopefully someone that is in the Gwinnett/Barrow/Hall county area. I have opened the radio many times, and have yet to see the jumper that needs to be removed.

Any help will be greatly appreciated

How big of a generator does it take to start a typical freezer or refrigerator? I have a 1 kW generator, and it wouldn't even begin to start the freezer motor, even though the running power is much less than the generator's capacity.

The Radiocommunications Agency
The Radiocommunications Agency
==============================
The Radiocommunciations Agency is an executive agency of the
Department of Trade and Industry and is responsible for the
management of that part of the radio spectrum used for
civil purposes within the UK.

One of their responsibilities
is the use of amateur radio and this includes
the following.

* Advising government on policy matters.
* Considering the need for changes to licence conditions.
* Interpretation of licence conditions.
* Taking responsibility for the Novice Licence Training Course,
the
RAE, the NRAE, the 5 and 12 wpm Morse code tests.
* Taking responsibility for the distribution of amateur licences.
* Taking part in international discussions on behalf of UK
amateurs.
* Co-ordination of clearance procedures for beacons and
repeaters.
* Provision of information.
* Promotion of amateur radio.
* Enforcement of the Wireless Telegraphy Act.

The amateur Radio Licence
=========================
The Agency works closely with the RSGB to ensure that the amateur
licence
fully meets the needs of today's amateur. Changes normally occur
following
representations made to us by the RSGB and the Agency meets regularly
with
them to discuss possible changes. There are only limited resources e
amateur radio service and channelling of views through a
representative
organisation allows the RA to make maximum use of those resources.
It is of course important to balance these views and hence the Agency
will also receive comments from individuals.
If you would like clarification of an existing licence condition,
you can contact the RA at the following address:
```

Radiocommunications Agency
New Kings Beam House
22 Upper Ground
London SE1 9SA

Amateur Radio 0171 211 0160
Karen Scott 0171-211 0157
Answerphone 0171 211 0591
Fax 0171 211 0162/0163

Main switchboard 0171 211 0211

Any changes affecting all amateurs are announced in the London,
Edinburgh and Belfast Gazettes as, well as in the amateur press.
A copy of the licence conditions is provided when a new licence is
issued
and if there are subsequent changes an updated copy is provided at the

time of renewal.

Examinations
============
The RAE and NRAE are run on the RA's behalf by the City and Guilds
London Institute. The Agency works closely with City and Guilds
and RSGB through advisory committees to ensure that the present high
standards are maintained and that the syllabi are kept up to
date.

The Novice Licence Training Course and both Morse tests are run on the

Agency's behalf by the RSGB and again we are closely involved in both
the standard examination and the format of the actual course and
tests.
reciprocal agreements which allow UK

Distribution of Amateur Radio Licences
======================================
The administration of licensing is carried out on the RA's
behalf by Subscriptions Survives LTD. If you have any queries
about individual licenses you should contact them direct on the
address below. They also operate a telephone helpdesk 0117 925 8333

Radio Licensing centre
Subscription Services Ltd
PO Box 885 Bristol;.

International Discussions
=========================
Reciprocal Agreements.
The Agency has already negotiated a number of reciprocal
agreements which allow UK amateurs to operate abroad
There are still a number of countries with which no agreement
currently
exists; however the Agency will continue to make contact in these

cases.

Commonality of Licence Conditions.
==========
The Agency represents the UK within the CEPT and is
working towards harmonisation of licence conditions
and mutual recognition.

Control of Interference.
==========
The RA is responsible for administering
the International Radio Regulations in the UK, and as such may not
give
any station a frequency which would cause interference to station
operating within the International Telecommunications Convention

The Repeater Network
==========
Although initial vetting of applications is carried out by the Society

on the RA's behalf, nevertheless the Agency is responsible for the
final
clearance of applications. This can be a relatively long procedure as

clearance usually involves consultation both with other Government
departments and with the Agency's own RIS Investigation Service.

A number of free information sheets are made available through:
====
The Information & Library Service
Radiocommunications Agency
New Kings Beam House
22 Upper Ground
London
SE1 9SA
Answerphone 0171 211 0591

Fax 0171 211 0162/0163

The following are some of the information sheets which
relate specifically to the amateur service:

RA 67 The Radio Users Guide to the Law
RA 165 Application for Novice Licence
RA 166 The Novice Licence
RA 169 Receive only - Scanners etc.
RA 178 Transverters and Transverter Drivers
RA 179 Advice on Television and Radio Reception
RA 180 Licensing
RA 181 Morse
RA 182 Amateur Radio Call Signs
RA 183 Clubs and Societies
RA 184 Examinations (RA.E /NRAE)

RA 186 CEPT (UK Licensees)
RA 187 CEPT (Visitors to UK)
RA 188 Application for an Amateur Radio Licence
RA 189 Applications for a Temporary Licence
RA 190 How to Become a Radio Amateur
RA 198 Abuse of Amateur Radio
RA 206 Addresses of Radiocommunications Agency Local District Offices
RA 234 EMC and the Radio Amateur

The RA Annual Report: Gives a yearly review of the work of the RA.
it is in two parts: Part 1 and Part 2 (Free)
Published in June of each year.
If you register RA will send it annually.

Also available is the RA internal telephone directory which
is very useful for seeing who works in which department and their
direct line number.

Promotion of Amateur Radio
==========
The Agency is well aware of the importance of amateur radio as a valuable
training ground for careers in radio and electronics and the RA try to

promote amateur radio as much as possible. The novice licence, for example,
was designed specifically to encourage young people into the hobby and it is
hoped that novices will progress to becoming full licensees.

Enforcement
==========
The number of people who misuse amateur radio is fortunately small. Nevertheless, there are some individuals who cause considerable problems to other amateurs or to other licensed radio users by transmitting on unauthorised frequency bands, use obscene language or generally use radio in an anti-social way. The Agency works closely with the RSGB's Amateur Radio Observation Service (AROS) in dealing with problems of abuse. Speculative monitoring by the Agency is expensive and amateurs are therefore requested to report problems of abuse direct to AROS for action in the first instance. Appropriate cases can then be referred to the Agency for detailed investigation. Details of the procedure for reporting abuse is set out in the leaflet RA 198 - referred to above. Having obtained evidence against an offender the Agency will either issue a formal warning, revoke a licence and/or initiate prosecution proceedings, depending on the seriousness of the offence.

The Annual Report and all information sheets are free you can
ask to be placed on the RA mailing list. They will then send you
their quartley update publication.

The UK Radiocommunications Agency Webb site

There shouldn't be too much of a problem for the FCC. After all, they have
at least one precedent - when they overrode a lot of state and local laws
in regards to Ham antennas.

C l o s e d C i r c u i t A d v i s o r y

The following advisory is not necessarily for broadcast. Due to Newslines involvement in the presentation of the 1996 Young Ham of the Year Award in Huntsville Alabama, Newscast 992 is being released one day early. This ends the closed circuit with Newsline report number 992 for release on Friday, August 16th, 1996 to follow.

(*****
The following is a QST

Hams react with anger to new RF exposure limits, the FCC says to be more careful filling out vanity call sign applications and a ham radio magazine says no to advertising from CBers. These stories and more on Newsline report number 992 coming your way right now!

(****
NEW RF SAFETY STANDARDS

The new government mandated RF safety standards for ham radio operations that were announced last week are causing cries of indignation from many in the Amateur Radio community. Hams are saying that they don't want them and some say that they are readying legal challenges to stop their implementation.
The new rules announced by the FCC take effect on January 1, 1997. They will impact on the way hams running 50 watts or more peak envelope power out, on any band, operate. Also, on the way every radio amateur interfaces with the non ham community. This is because the FCC now will require hams to consider the possibility of health problems related to radio frequency energy exposure from their stations to members of the general public.
In its Report and Order on ET docket 93-82, the Commission adopted Maximum Permissible Exposure limits for electric and magnetic field strength and power density for transmitters operating at frequencies from 300 kHz to 100 GHz. This includes transmitters used in the Amateur radio service. These new MPE limits are generally based on recommendations of the National Council on Radiation Protection and Measurement. In some respects, they are also based on the guidelines issued by the Institute of Electrical and Electronics Engineers and subsequently adopted by the American National Standards Institute. In formulating the new rules the Commission used the 1992 ANSI and IEEE standards instead of the 1982 ANSI standards. The 1982 standards had formed the basis for the existing rules under which Amateur Radio stations were categorically exempted. And

judging by conversations heard on the air, monitored on packet and going on the Internet, the ham radio community wants the old standard put back in place.
While ARRL Executive Vice president Dave Sumner, K1ZZ writes that the FCC expects it will not be difficult for most amateur stations to show that the specified limits will be met, hams are not convinced. Most fear that the enactment of these new RF exposure guidelines will give new legal arguments to states and municipalities to ban not just antennas and towers, but also the operation of radio transmitters as well. Hams also worry that the federal, state and local bureaucracies will each place individual demands on ham stations to prove compliance through costly scientific testing. Testing that some say, no ham could afford.
Also worrying hams is the question of personal liability. Many Internet postings note that there are a lot of lawyers looking to make names for themselves by soliciting cases that hold the possibility of setting legal precedents. Many wonder who will be the first target of one of these career seeking legal minds willing to bankrupt a ham just to put his name in the ranks of legal experts on another innocuous cause celebe.
As we go to air, it is not clear as to exactly what is involved in conducting a routine RF radiation evaluation. Dave Sumner says that the commission has promised to release a revised bulletin titled Evaluation Compliance with FCC Specified Guidelines for Human Exposure to Radio Frequency Radiation. It is hoped that document will spell out the level of involvement and monetary expenditure of RF compliance certification that will be required by hams. In the meantime, the ARRL says that it is studying the 100 plus page docket, to see if the League should seek reconsideration of any aspect of the FCC decision. Even if the League does not file a challenge, from what we are reading on the Internet, it seems likely that more than a few individual hams will.

(*****
FCC VANITY CALL SIGN ADVICE: READ THE DIRECTIONS!

The FCC wants hams to be a lot more careful in the way they fill out their paperwork when applying for vanity call signs. So says Larry Weikert, who is the FCC's point man in Gettysburg for processing vanity call sign applications. Weikert says that many vanity applicants are failing to follow directions when filing the Form 610V vanity call application. He asks that all applicants take the time to carefully read the instructions and follow them explicitly to avoid problems or disappointments. In addition, applicants should always print legibly. Weikert also says that some applicants are attaching Form 610s to their vanity call sign applications to renew licenses or to file an address change. He says that Form 610 transactions should be filed separately. They should not be included as part of a vanity call sign application.

(*****
HAM RADIO CONCLUDES AIR CRASH SUPPORT

More than 125 hams from the Greater New York City-Long Island vicinity have already contributed more than 2500 volunteer hours to support recovery

operations in the wake of the TWA Flight 800 disaster. Although the recovery effort continues, and Amateur Radio remains on call, official involvement by hams concluded the last weekend in July.
Walt Wenzel, KA2RGI, the regional RACES officer for the New York State Emergency Management Office had high praise for the work of the ham radio volunteers. Wenzel also offered some lessons learned from the recovery support effort. He says that hams must learn not to always count on 2 meter repeaters alone to provide coverage of a disaster area. He also says to keep a database of available equipment that can be loaned to operators who turn out to help.

(*****
NO MORE CB ADDS

Amateur Radio Trader magazine says that it will no longer carry ads for any type of 11 meter CB related equipment. This includes such items as legitimate CB transceivers, related 11 meter equipment and amplifiers capable of operating on the 11 meter band. In a published statement to his readers, Editor Nick Smith, WA4GKM says that maintaining the high standards expected of the Amateur Radio service is the reason that hams have received a high level of respect. He says that Amateur Radio Trader has decided to assist in maintaining that level of respect by keeping the magazine as a ham radio only publication.

(*****
W2NSD FILES PERSONAL BANKRUPTCY

Financial problems continue for 73 Magazines Wayne Green, W2NSD. On July 3rd, Green filed a voluntary petition for Chapter 7 individual bankruptcy in the United States Bankruptcy Court for the District of New Hampshire. In his petition, Green lists his total assets at just over $5000 and liabilities exceeding one million dollars.
Greens' declaration of personal bankruptcy comes only a month after his Wayne Green Incorporated filed for business bankruptcy. Not included in either filing is 73 Magazine long associated with Green. Two years ago 73 was sold to his wife Sherry Smith-Green. Sherry Green reportedly has a new staff already in place so that publication of 73 should remain on schedule for the foreseeable future. Wayne Green, W2NSD, is expected to continue contributing editorially.

(*****
ALABAMA PLATES

Amateur radio operators in Alabama are getting something they've been wishing they had for years.

Take a look at a current Alabama amateur radio license plate and it looks a lot like a regular plate, the only difference is that the ham's call sign appears in place of the regular license numbers. That has led to years of questions from non-hams, wondering about the strange mix of letters and numbers. Alabama hams have wished for something more distinctive, a plate that clearly identifies amateur radio. They'll soon

be getting their wish. It's all thanks to Lawrence Thompson, KE4RPX, of Montgomery.

"My former background was, before I became a priest, was I had been a lobbyist in Kentucky. I thought I knew my way around the legislative process firly well. And it occurred to me, why go to the legislature, which is what the people seem to be suggesting? Instead, the enabling legislation was already on the books. So, to me this was an administrative process and that is what it turned out to be." Thompson

Thompson contacted the state's Department of Motor Vehicles. A few meetings and phone calls later, and Alabama hams get approval for new plates they can call their own:

"I'd had a lot of hams say 'why hadn't we had this done' and when it all came down to the end it took three and a half to four hours to do the whole process. When you lump up all the time togather. But I asked the guy at the Motor Vehicle station, had anybody ever contacted him about it? And he said no. He had been here twenty six years and nonbody had even asked me about it. So, twenty six years and four hours. So that's how long it took!" Thompson

The new plates leave no doubt as to what the letters and numbers mean. Thompson helped design it:

"This tag says amateur radio at the bottom. It has a tower on the left hand side of the tag. So from a distance it will be easily visable that it is a ham radio operator driving the vehicle." Thompson

A wish Alabama hams have had for decades answered with four hours work. The new plates will be available starting in January.

Lawrence Thompson learned something else during his work to get new plates for hams. He says Alabama enacted legislation permitting amateur radio license plates back in August 1951, making it the first state in the U.S. to do so.

AMATEUR RADIO AWARENESS DAY IS SEPTEMBER 21

Amateur Radio Awareness Day take place this year on September 21st. Amateur Radio Awareness Day is an annual ham radio event designed to interest the general public in local ham radio activities and spread the word of ham radio's readiness to assist the community.
Press kits and other aids to help you promote ham radio for Awareness Day are available from ARRL's Public Relations Office. Contact:

Jennifer Gagne, N1TDY
Monday to Friday at (860) 594-0328
from 9 am to 4:30 pm, eastern time.

(*****
NEW SHOW

"Into Tomorrow" with Dave Graveline, The Consumer Electronics & Technology radio network program, is now available nationwide. The show airs live on Saturday mornings from 10am to Noon, Eastern Time, from Dave's home in Miami Lakes, Florida, via an Integrated Services Digital Network line to the ABC Radio Network satellite Uplink in New York City. Discussions center around the latest in technology for all kinds of products and services. The show is highly interactive, with listeners encouraged to join the show live via E-mail as well as toll free open phones. Listen for Into Tomorrow on the Satcom C5 satellite, Transponder 23, SEDAT Channel 15.

1996 ARRL AND TAPR DIGITAL CONFAB SET

Mark your calendars and make plans now to attend the year's premier Amateur Radio digital communications event. The 1996 joint ARRL and Tucson Amateur Packet Radio Digital Communications Conference is set for September 20th to the 22nd in Seattle, Washington, just minutes from the SeaTac Airport.
This marks the first time the ARRL Digital Communications Conference and TAPR Annual General Meeting have joined into one conference. Local sponsors include the Puget Sound Amateur Radio TCP/IP Group and Boeing Employees Amateur Radio Society.
For more information on the conference, registration, and hotel reservations, contact:

Tucson Amateur Packet Radio
8987-309 East Tanque Verde Rd, No. 337
Tucson, Arizona
85749

UK BENEFACTOR

From overseas, word that Gerald Clews, G7PRF, of the Electrical and Electronic Engineering Faculty at King's College, London, was presented with a cheque for 500 pounds from the RSGB Legacy Fund by Ron Broadbent, G3AAJ. The RSGB Council agreed to use some of the Legacy Fund to make an annual award to a university. After approaching several institutions, it was decided to make the funds available to King's College.
The monies will be used to help a student who is taking a degree course in radio communications or electronics. Gerald was chosen by the College as being the most deserving.

(*****
NEW LIFE FOR OLD HEATHKITS?

If you are a Heathkit aficionado, listen up. The ARRL Lab's Mike Tracy, KC1SX, says that he has uncovered a possible source for surplus Heathkit parts that Heath sold off a number of years ago. It's a company called Spectrum Electronics located in Grand Rapids, Michigan.
Mike Tracy says that although Spectrum Electronics is strictly a repair business, if you let them know what specific Heath part number you are

looking for, they may be able to provide it. However, he emphasizes that you must be specific and you must supply exact part numbers.

(*****
DX

In DX, word that the Long Island DX Bulletin will be known as The DX Reporter. This after famous DXer and writer Chod Harris, VP2ML, turns over the reins to new publishers Paul and Nancy Smith, AE4AP and KB4RGW. They are also will taking over the DX Bulletin and The DX Magazine from Harris. The DX Reporter will be published every two weeks. The changeover is supposed to happen within a few weeks.
The Smiths already produce The GO List and QSL Manager Lists that they previously acquired from Jay and Jam O'Brian W6GO and K6HHD.

IARU Future of the Amateur Service Committee.
Thanks to Kees Murre, PA2CHM, in his article in the June 1996 edition of
ELECTRON, we now have a better idea of what this committee is charged with.

First, the prime purpose is to study the international regulations covering the Amateur Service and the Amateur Satellite Service with a view to formulate any possible changes, required to come to a correct representation of the aims, requirements, obligations and privileges for
the Amateur Service in the next century, so that the Amateur Service remains viable, meaningful and of value, not only to the general public
but also to the licensees, whereby the following must be considered: the definition of the Amateur Service, - the character and content of transmissions by amateur stations, - the provisions required for emergency, that is disaster, transmissions, - to ease the requirements to achieve international recognition of the Amateur Service, - the technical and operational qualifications for transmitting amateurs and any other question considered to be of relevance by the working group.

Further, the working group will also:
start discussions by means of supplying discussion topics, supply of background information and possible solutions, - invite persons, groups
(branches or clubs), member organisations, such as the WIA and regional
organisations (lARU Regions) to comment on these topics.

Although '99 appears to be far away, it is essential that preparations commence now to encourage opinions before it is too late. At the Region
I Conference in Oct 1996, it is hoped most of the Societies have some ideas
on how to react to the various points raised, and, no doubt, the Region 3
Conference next year will be busy to discuss WRC-99, they will have to do it,
because there will then be less than 2 yrs to go.

Article Sl.56 of the Radio Regulations states that the Amateur Service is a radio communication service for the purpose of self-training, inter

communication and technical investigations carried out by amateurs, that
is, by duly authorised persons interested in radio techniques solely with
a personal aim and without pecuniary interest. But, of greater impor-
tance to us, is article 25, section 1 of the ITU Radio Regulations, What
the amateur can and can not do.
What then does article 25 say about the Amateur Service,
quite a bit, no less than 11 subsections.
l: comunication between amateurs of different countries is prohibited if 1
of those countries has objections against such a contact.
2: messages may only be transmitted in clear language & the nature of such
messages may only be of a personal and/or technical nature of such minimal
importance that the use of a public service (telephone) is not required.
3 & 4: communications on behalf of a 3rd party is absolutely forbidden

unless the administrations themselves allow this.
5: It is mandatory to pass a Morse test successfully when using frequencies
below 30 Mhz. The Morse test must be sent by hand & received by ear.
6: Administrations are responsible to take any actions they deem fit to
ascertain whether a person has the necessary technical & operational
qualifications to operate an amateur station.
7: Maximum power of transmissions is determined by the administrations,
depending on the qualifications & conditions under which the stations
may operate.
8: the transmission frequency must be stable & free of harmonics.
9: amateurs must identify themselves during a transmission regularly at
certain intervals.
lO: where applicable, the above regulations are also in force for the
Amateur Satellite Service and.
ll: Amateur stations in space must have sufficient control stations on earth
and must be supplied with equipment to combat harmful interferences.

Some questions which come to mind and should he answered:
1: Is the definition of the Amateur Service still valid?
2: Should the Radio Regulations leave it to the respective Administrations
to decide whether or not their amateurs may make contacts with a certain
country or should the regulations incorporate such a prohibition order if a

country complains. Or does it matter at all?
3: Should article S.25 make provision to encourage amateurs to train for
emergency or disaster communications. How is this then related to S25.3
(third party communications)? Is such training and development not part of
the general amateur service?
4: Should the prohibition on all third party traffic be retained? It is
suggested that, with the present state of technical progress, exceptions
should be noted, specially when this covers non-commercial messages or

messages which presently are allowed under S25.2.
5: Should the Morse code test be retained for certain classes of licenses if
a treaty is signed between countries (CEPT?)
6: Should Art S25 not cover the possibility to use one's home callsign
on a worldwide basis, such as is now the case with CEFT and CITEL
regulations?
7: Should Art S25 not cover the possibility of international recognition of
amateur licenses (as covered under CEPT-HAREC) and, if so, should not such a
cover be strengthened to decide on a norm to which the quality of the amateur
in technical and operational must be compared with. And for the spaciologists
6: The Amateur Satellite Service is confined to space stations which are
launched by an earth satellite. Is this not too restricted for the future
developments or does it not matter. I know it is difficult at times, but now
is the time to get that grey matter working and be ready when the answers are
required.

IARU Discussion Paper 1/9

The International Regulations Affecting the Amateur Service

April 1996

Introduction

The International Regulations Affecting the Amateur Service:

1. Summary of issues, and matters on which opinion is sought
1.6. The definition of the "amateur service"
1.7. The banned country list
1.8. The amateur service as a resource for emergency communications
1.9. Messages on behalf of a third party
1.10. The technical and operational qualifications to be an amateur
1.11. Morse code
1.12. The international recognition of amateur licences
1.13. The amateur satellite service
1.14. Other matters
1.15. A request for opinion
2. Background
3. Some Constraints
4. An opportunity?
5. A Possible Time Table
6. The definition of the amateur service
7. What amateur stations may transmit
8. Emergency communication
9. Technical and operational qualifications for the amateur
10. The international recognition of the licences of visiting amateurs
11. An unnecessary restriction?
12. The provisions of S25 affecting the amateur-satellite service
13. Conclusion
ANNEX
RESOLUTION COM4-4
ANNEX TO RESOLUTION COM4-4
RESOLUTION COM4-5

IARU Committee Seeks WRC-99 Comment

The Future of the Amateur Service Committee (FASC) of the International

Amateur Radio Union has released a 20-page discussion paper dated April
1996 and entitled The International Regulations Affecting the Amateur
Service. The FASC discussion paper was sent to IARU member-societies on
April 12 and is available on the World Wide Web via
http://www.arrl.org/iaru/. After reviewing the paper, any and all
interested parties are invited to submit comments to the FASC. Comments
received by the end of June 1996 will be considered as the committee
prepares its report to this year's IARU Region 1 Conference.

As announced on page 94 of April 1996 QST, the FASC was appointed by IARU
President Richard Baldwin, W1RU, to guide the formulation of an IARU
position on the 1999 World Radiocommunication Conference (WRC-99)
preliminary agenda item concerning the provisions of the international
Radio Regulations that deal specifically with the Amateur and
Amateur-Satellite Services. These provisions are contained in Article 32 of
the 1994 and earlier editions of the Radio Regulations, which was
renumbered Article S25 at WRC-95 last fall. (The complete text of the
Article is contained in Appendix 5 of The FCC Rule Book, 10th edition,
published by the ARRL.) WRCs are convened by the International
Telecommunication Union every two years and have the power to revise the
Radio Regulations, which have the force and effect of a treaty.

The discussion paper summarizes the issues that arise from the existing
Article S25, which imposes obligations on administrations as to the manner
in which they regulate the Amateur and Amateur-Satellite Services. The
essence of these obligations may be summarized as follows:

* Communication between amateurs of different countries is to be
prohibited if one country objects;

* Messages are to be limited to plain language, about technical or
personal matters and of such unimportance that the use of a public
communications system would not be justified;

* Communications on behalf of third parties is prohibited, though the
Article permits countries to make arrangements to allow such
communications;

* Amateur operator licensees using frequencies below 30 MHz shall have
demonstrated an ability to send and receive texts in Morse code;

* Administrations shall take such measures as they think necessary to
verify the operational and technical qualifications of amateurs;

* The maximum power of amateur stations is to be fixed by
administrations, having regard to the operators' technical
qualifications and the conditions under which the stations
operate;

* All the general Radio Regulations apply to amateur stations, which
shall be stable and free from spurious emissions;

* Amateur stations shall transmit their call signs at short
intervals;

* As appropriate, the same provisions apply to the Amateur-Satellite
Service; and

* Amateur space stations must have sufficient earth command stations and
be fitted with devices so that harmful interference can be
terminated.

The discussion paper poses issues that arise from these provisions in the
form of questions. For example, with regard to the Amateur Service as a
resource for emergency communications, it states:

We have examined the many international declarations that
recognize the value of the amateur service as a resource for
emergency communications.

* Should Article S25 include a provision encouraging the
amateur service to have the experience to and to provide
emergency communications? Does the prohibition of
international communications on behalf of third parties
inhibit the development of emergency communication nets? Is
the ability of the amateur service to have the experience to
provide and to provide emergency communications inhibited by
the nature of the messages permitted to be transmitted by
amateur stations?

With regard to the Morse code, it states:

We do not question the value of Morse code as a means of
communication, nor do we question the right of an administration
to require its amateurs to demonstrate a skill in Morse code. At
present, Morse code as a qualification is a treaty obligation. We
have regard to the fact that we are concerned with obligations
that will govern the amateur service in the next century.

* Should testing the Morse code ability of certain amateur
licencees be retained as a treaty obligation? If so, what
are the reasons that administrations would find persuasive?

In addition to addressing the existing provisions, questions are also
posed
as to whether or not provisions should be included in Article S25 to
facilitate the international recognition of amateur licenses held by
visitors to other countries.

The FASC paper discusses these and other issues in some depth, and
lays out
a timetable for WRC-99 preparations. The committee plans to submit a
report
to each IARU regional conference to be held between now and 1999,
beginning
with the Region 1 Conference that will open in Tel Aviv on September
30,
1996. Through the mechanism of these regional conferences, it is hoped
that
a worldwide consensus of the Amateur Radio community can be developed
so
that a common position can be communicated to the national
administrations
that ultimately will submit proposals to WRC-99.

The International Regulations Affecting the Amateur Service

1. Summary of issues, and matters on which opinion is sought.

1.1. The preliminary agenda for the ITU World Radiocommunication
Conference
to be held in 1999 includes the consideration of the provisions of the
Radio Regulations dealing with the amateur and amateur satellite
services,
which are to be found in Article S25.

1.2. This Discussion Paper has been prepared by a Committee appointed
by
the President of the IARU. The Paper addresses policy and does not set
out
the language of any amendments that could be made to the Regulations
as a
result of the adoption of particular policies, except to illustrate
certain
points.

1.3. This first part of the paper summarises the matters we examine in
detail and attempts briefly to set out the issues that we see, and
identify
the matters that we think should be addressed in the opinions that we
seek

to enable the IARU to develop a world wide policy.

1.4. We started by examining the definition of the "amateur service." We
then examined Article S25 with care. It is very short. The Article is
concerned with international communications. The Radio Regulations are part
of a treaty between nations and do not of themselves impose obligations on
amateurs, but impose obligations on administrations to regulate the amateur
service in a particular way. The essence of the obligations may be
summarised as follows:

IARU Discussion Paper 2/9

* Communication between amateurs of different countries is to be
prohibited if one country objects;

* Messages are to be limited to plain language, about technical or
personal matters and of such unimportance that the use of a public
communications system would not be justified;

* Communications on behalf of third parties is prohibited, though the
Article permits countries to make arrangements to allow such
communications;

* It requires an amateur licencee using frequencies below 30 MHz to have
demonstrated an ability to send and receive morse;

* Administrations shall take such measures as they think necessary to
verify the operational and technical qualifications of amateurs;

* The maximum power of amateur stations is to be fixed by
administrations, having regard to the operators' technical
qualifications and the conditions under which the stations
operate;

* All the general Radio Regulations apply to amateur stations, which
shall be stable and free from spurious emissions;

* Amateur stations shall transmit their call signs at short
intervals;

* As appropriate, the same provisions apply to the amateur satellite
service; and

* Amateur space stations must have sufficient earth command stations and
be fitted with devices so that harmful interference can be terminated.

1.5. We now summarise what we see as the issues, and identify the matters
on which we seek responses:

1.6. The definition of the "amateur service":

That definition has not been significantly changed since the first international regulation of radio. Our view is that it remains entirely
appropriate today.

* Is the definition of the "amateur service" still appropriate?

1.7. The banned country list:

* Should the Radio Regulations leave it to administrations to prohibit
or permit their amateurs to engage in international communications, or
should the international Regulations themselves prohibit such communications if one country objects? Does it matter?

1.8. The amateur service as a resource for emergency communications:

We have examined the many international declarations that recognise the
value of the amateur service as a resource for emergency communications.

* Should Article S25 include a provision encouraging the amateur service
to have the experience to and to provide emergency communications?
Does the prohibition of international communications on behalf of third parties inhibit the development of emergency communication nets?
Is the ability of the amateur service to have the experience to provide and to provide emergency communications inhibited by the nature of the messages permitted to be transmitted by amateur stations?

1.9. Messages on behalf of a third party:

We do not question the right of an administration to prohibit its amateurs
from carrying messages on behalf of a third party. We do believe that any
messages so carried must be non commercial and not carried for reward. We
question whether or not the attitudes that existed when the

international
prohibition was included in the Regulations have changed. We also
raise the
question whether the prohibition is really consistent with the
international use of store and forward techniques.

* Should the international prohibition remain in the Regulations?
Would
its removal enhance the ability of the amateur service to provide
emergency communications?

1.10. The technical and operational qualifications to be an amateur:

We suggest that the technical and operational qualifications to be an
amateur are fundamental to the privileges that are given to the
amateur
service. The appropriate qualification is essential to distinguish the
amateur service from other use of the spectrum. However, the present
Regulations do not set a "standard," but leave that to each
administration.
If it was considered desirable that some standard be set, we would not
suggest an elaborate curriculum, rather the identification of basic
topics
on which knowledge should be demonstrated.

* Should the Article set some standard for the technical and
operational
qualifications for the amateur service? How can this be made
flexible?
If a standard is "incorporated by reference," should the standard
be
mandatory? If it is, then it would need to be approved by the
next
competent WRC. But if it isn't, would there be any difference
from the
present position?

1.11. Morse code:

We do not question the value of morse code as a means of
communication, nor
do we question the right of an administration to require its amateurs
to
demonstrate a skill in morse code. At present, morse code as a
qualification is a treaty obligation. We have regard to the fact that
we
are concerned with obligations that will govern the amateur service in
the
next century.

* Should testing the morse code ability of certain amateur
licencees be

retained as a treaty obligation? If so, what are the reasons that administrations would find persuasive?

1.12. The international recognition of amateur licences

Many countries accept a home country driving licence to allow visitors to drive in their country. Should an amateur be able to visit another country and during that visit be able to use his home country licence? We have examined the CEPT arrangements for Europe, and the CITEL arrangements for the Americas. We suggest that Article S25 could include provisions facilitating such use.

* Should the Article include a provision facilitating the international recognition of amateur licences of visiting amateurs? If so, would the prospects of the acceptance of such a provision be enhanced if the Article set a standard for the technical and operational qualifications of amateurs?

1.13. The amateur satellite service:

We have examined the definition of the amateur satellite service, and have a concern that the service is restricted to space stations on "earth satellites". We do not know whether that restriction could present a problem in the future. We have also looked at the measures to ensure that amateur satellites do not cause harmful interference.

* Should the amateur service seek a change to the definition of "amateur satellite service"? Or, does the definition not matter? Should any other change to the provisions governing the amateur satellite service be sought?

1.14. Other matters:

Are there other matters that are not included in Article S25 and should be addressed in the Article, or other changes to Article S25 that should be sought?

1.15. A request for opinion

1.16. We set out in part 5 of this Discussion Paper the timetable we propose.

1.17. It is essential, if the approach we propose is to be successful, that
we have the reasoned views of as many individuals and organisations as possible, whether in favour or not, in respect of the suggestions we make
and in respect of matters that we have not raised.

1.18. Please communicate to the Committee as follows:

IARU Discussion Paper 3/9

2. Background

2.1. The World Radiocommunication Conference 1995 adopted a resolution (Resolution GT PLEN-5) expressing the view that certain items should be
included in the Preliminary Agenda for the 1999 World Radiocommunication
Conference, including the following item:

"2.2 consideration of Article S25 concerning the amateur and amateur-satellite services;"

2.2. On 30 November, 1995. the President of the IARU, Richard Baldwin, W1RU, announced the appointment of a committee, to be known as the Future
of the Amateur Services Committee ("FASC") with the following terms of reference:

A Examine the international regulations governing the Amateur Service and the Amateur-Satellite (other than frequency allocations) with a view to formulating the changes, if any, that are desirable to properly reflect the objects, needs, obligations and privileges of the services for the next century, so that the services remain viable and valuable, meaningful and relevant to both the community and to those licenced in the services, having

regard to

* the definition of the services,

* the nature and content of transmissions of stations licenced in the services,

* the provision of emergency communications,

* the means to facilitate the international recognition of amateur licences,

* the technical and operational qualifications for licencees in the amateur services, and

* any other matters considered by the Committee to be relevant.

with a view to formulating appropriate changes (if any) to the Radio Regulations.

B Undertake its task :

* encouraging full discussion of these matters by preparing discussion papers providing background information, identifying issues and proposing possible solutions,

* inviting comments from individuals, groups, member societies and regional organisations,

* participating as appropriate in international and other meetings, and taking into account the comments it receives, preparing reports, recommendations and proposals for the consideration of the Administrative Council, member societies and regional organisations and ultimately preparing such material as is necessary to ensure that administrations accept proposals adopted by the Administrative Council,

all of the foregoing being an ongoing task bearing in mind the regional conferences and the likely agenda for WRC-99.

2.3. The following were appointed members of the committee:

Michael Owen, VK3KI, Chair
John Bazley, G3HCT
Tom Atkins, VE3CDM
Terry Carrell, ZL3QL
Larry Price, W4RA
David Sumner, K1ZZ

In addition, President Baldwin is an ex officio member of the Committee.

2.4. The IARU must develop and advocate a coherent and relevant policy in respect of that agenda item and the committee has been given the task of assisting the development of that policy. This Discussion Paper is the first step in that process.

2.5. The purpose of this Discussion Paper is provide a basis for informed debate by the amateur community on the issues that are raised. It attempts to identify the relevant issues, provide the background, and offer some possible solutions. It is a discussion paper; and should not be interpreted as expressing any final view of the Committee, or the view of any region or the Administrative Council.

2.6. We believe that the issues are complex. We do not pretend that we will have identified all the issues or options. That is why we seek as many responses as possible to the issues raised by the consideration of Article S25.

3. Some Constraints

3.1. We are conscious of the difficulty of the task facing the amateur community in formulating a world wide approach to these issues. It is very easy for the amateur services to formulate a policy in respect of frequency allocations. The services are effectively in competition with other services for spectrum, and in general terms the amateur services will seek additional spectrum, ideally without sharing and certainly on a primary basis.

3.2. But we suspect that it is harder to formulate policy in respect of the international regulation of the services, simply because what some may see as sensible regulation or deregulation may be seen by others as inconsistent with their view of the purpose and objects of the amateur service and part of the services justification of its right of access to spectrum.

3.3. There are constraints:

* We are concerned with international regulation, that is
regulation
that exists by treaty between sovereign states. What is
appropriate
for national regulation may not be appropriate for treaty.

* The Radio Regulations, having the status of a treaty, must deal
with
principle, and provide the basic foundation for national
regulation.

* We must be careful that whatever we propose cannot be seen by any
member country of the ITU as an attempt to diminish sovereignty.
The
importance of sovereignty cannot be overstated.

* The Radio Regulations should be simple.

* We should avoid judging what amateur radio "ought to be" by
applying
our own standards without having regard to the fact that there
are
differences throughout the world and we should have particular
regard
to the needs of the developing countries where the per capita
amateur
population is at present low.

IARU Discussion Paper 4/9

4. An opportunity?

4.1. We believe that the opportunity that has been presented to the
amateur
services for the review of Article S25 should be welcomed. It is an
opportunity for the IARU to examine in a meaningful context the
appropriateness of the Regulations. We must question whether the
Regulations are capable of improvement to better reflect the
requirements
of the services for the next century. We must ask if change is
desirable as
a result of changing technology, of changing interests and the special
requirements of the less developed countries.

4.2. If we seek change we should, we think, look for improvement to
make
the amateur service more valuable and meaningful to those countries
that
presently encourage it, and more attractive to those that do not.

4.3. We suggest that all involved in this process should attempt to
take a
global approach to the issues, trying to understand and accept
differences,

with a view to seeking change, if change is desirable, that will enhance
amateur radio for the future and throughout the world.

4.4. Unlike spectrum allocation issues, we are not in competition with other services. If we present a single world wide position, and we have
sound and logical reasons for that position and that position is sensitive
to the differing needs of the different countries, we have every prospect
of that position being accepted.

5. A Possible Time Table

5.1. There cannot be, at the time this paper is written, an absolute certainty that the WRC presently planned for 1999 will be held in that year, or that the preliminary agenda will not change. However, we believe
that we must plan on the basis that the time and the agenda will remain as
presently planned.

5.2. We see a world wide position being developed by an evolutionary process. We do not believe that the IARU can develop policies to meet the
needs of different administrations and the needs of amateurs throughout the
world without a period of consultation.

5.3. We suggest the following:

* This Discussion Paper is distributed to the members of each regional
organisation, and every member society and other groups by April 12,
1996.

* Comments and submissions to our Committee will be sought by the end of
June 1996.

* We will prepare a Report by the end of July 1996, which is likely to
make certain recommendations, which is considered by the Region 1 Conference in October 1996.

* We would then prepare a further Report, for consideration by the Region 3 Conference in the following year, and then repeat the process
for the Region 2 Conference the year after.

* We would, throughout this process, seek comments and submissions from individuals, groups and societies.

* We would also see the desirability of consulting with experts from the private sector, the ITU and administrations.

* We recommend now that the approach of each Region should be to express their view, but at the same time delegating the task of formulating a global policy to the Administrative Council after the Region 2 Conference in 1999.

5.4. We believe that it is essential that a final position and supporting material be adopted well before WRC-99, and the latest that can occur is immediately following the 1998 Region 2 Conference, so that the member societies and the regions are able to present the IARU position to their administrations.

5.5. We now discuss in some detail some of the issues that we are asked to consider.

5.6. In referring to the Radio Regulations we use the numbering adopted by the Report by the Voluntary Group of Experts to Study Allocation and Improved use of the Radio Frequency Spectrum and Simplification of the Radio regulations (the "VGE Report").

6. The definition of the amateur service

6.1. While the preliminary Agenda for WRC-99 is confined to S25 and makes no reference to Article S1, Terminology, we address the definition of the amateur service first as we see that as a logical starting point. We address the secondary definition of the amateur satellite service in the context of the satellite provisions generally.

6.2. The essence of the present definition is not new. Article 1 of the General Regulations annexed to the International Radiotelegraph Convention, Washington, 1927, defined "amateur station" as:

"A station used by an "amateur", ie., by a duly authorised person interested in radio technique solely with a personal aim and without pecuniary interest."

6.3. The essential element of the definition, the concept of "a duly authorised person interested in radio technique solely with a personal aim and without pecuniary interest" has remained part of the definition since the first international regulation of the service.

6.4. The present definition is:

S1.56 Amateur Service: A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorised persons interested in radio technique solely with a personal aim and without pecuniary interest.

6.5. We are of the opinion that the definition of "Amateur Service" in the present Regulations is entirely appropriate and that no change should be considered.

7. What amateur stations may transmit

7.1. Again we set out the relevant parts of the Regulations:

S25.2 (1) When transmissions between amateur stations of different countries are permitted, they shall be made in plain language and shall be limited to messages of a technical nature relating to tests and to remarks of a personal character for which, by reason of their unimportance, recourse to the public telecommunications service is not justified.

S25.3 (2) It is absolutely forbidden for amateur stations to be used for transmitting international communications on behalf of third parties.

S25.4 (3) The preceding provisions may be modified by special arrangements between the administrations of the countries concerned.

IARU Discussion Paper 5/9

7.2. We would suggest that, at the time that these provisions were first adopted, there were at least two policy objectives that were sought to be satisfied. One was a concern as to security, the requirement that transmissions should be in plain language.

7.3. The second objective, reflected particularly in the language "limited to messages of a technical nature relating to tests and to remarks of a personal character for which, by reason of their unimportance, recourse to

the public telecommunications service is not justified" and the prohibition
of international communication on behalf of third parties, was the desire
to preserve a government monopoly of communications. With the notable
exception of the United States, the common carrier was almost inevitably
government owned and government controlled.

7.4. We wonder, if that identification of policy objectives is correct,
whether either objective is as important today. In particular, the
traditional government monopoly of communications has shifted, and will no
doubt continue to shift, to a deregulated and competitive market, in an
increasing number of countries. We question whether the words "for which,
by reason of their unimportance, recourse to the public telecommunications
service" are either necessary or appropriate today.

7.5. The fact is that today many countries permit their amateurs at a
national level to transmit communication on behalf of third parties, in
some cases as an exception to a general rule to facilitate emergency
communication and for training for such communication, in other cases a
more general permission to transmit non commercial, non political, non
religious, non entertainment and unpaid messages. It is also the fact that
many countries have specifically entered agreements to give effect to
S25.4.

7.6. Our tentative view is that what is loosely called "third party" by
amateurs, which does not include any commercial or paid messages, should
not be prohibited by the international regulations. Certainly the removal
of the prohibition would remove any doubt as to the legality of modes of
international communication using store and forward techniques. It is
appropriate to emphasise that this change would not in any way obligate an
administration to permit its amateurs to conduct communications on behalf
of third parties, international or otherwise.

8. Emergency communication

8.1. The amateur service has on many occasions played a vital role in emergency communications. Because amateur stations are spread geographically it has often been the case that when public communications
are inoperable, the only communications link is the amateur.

8.2. The importance of facilitating emergency communications by using the
resource of the amateur service has been recognised internationally.

8.3. We have considered the "The Tampere Declaration on Disaster Communications", the conclusion of the group of experts in communications
and disaster management, meeting in Tampere, Finland 20 to 22 May, 1991,
who saw an urgent need to improve international co-operation in communications.

8.4. We have also considered Resolution 36 of the ITU Plenipotentiary Conference, Kyoto, October 1994 "Telecommunications for Disaster Mitigation
and Disaster Relief Operations" and also resolution 7 of the First World
Telecommunications Development Conference, Buenos Aires, April, 1994.

8.5. We have also had regard to Resolution 640 of the World Administrative
Radio Conference, Geneva, 1979 "Relating to the International Use of Radiocommunications in the Event of Natural Disasters, in Frequency Bands
allocated to the Amateur Service" which points out "that in the event of
natural disaster normal communication systems are frequently overloaded,
damaged, or completely disrupted ... that under those circumstances the
stations of the amateur service, because of their widespread distribution
and their demonstrated capacity in such cases, can assist in meeting essential communication needs"

8.6. We believe that we can safely assume that the historical and potential
contribution of the amateur service to emergency communications is not in
question, and that the question we must ask is whether the Radio Regulations could or should be amended to encourage and facilitate the amateur service's ability to provide emergency communication.

8.7. It would indicate a deficiency in the Radio Regulations if an amateur
in one country was, or believed he was, constrained by the Radio Regulations from relaying a message originating as a result of a

natural
disaster in another country.

8.8. We also suggest that it is obvious that if amateur emergency networks
are to be effective, it is necessary that they have the opportunity for
training.

8.9. We are concerned that the prohibition of carrying messages on behalf
of third parties and the restriction on what may be transmitted by an
amateur station may work against the growth of the ability of the amateur
service to provide emergency communications.

8.10. We are of the view that a change that could be considered is that
S25.4 could be reversed, in the same way as S25.1 allows communications
between amateur stations of different countries unless one of the countries
concerned has notified that it objects.

8.11. We believe that a provision should be inserted into the Radio
Regulations to encourage administrations to permit amateurs stations they
licence to not only to transmit emergency messages, but to be prepared to
do so.

8.12. It would also recognise the fact that many administrations do permit
their amateurs to carry messages on behalf of third parties

8.13. We do not believe that it is necessary to propose any change to the
Regulations to prohibit an amateur station being used for reward or
carrying messages of a business character, simply because the combination
of the definition and S25.3 make that quite clear.

9. Technical and operational qualifications for the amateur service

9.1. The present Regulations provide:

"S25.5 3. (1) Any person seeking a licence to operate the
apparatus of an amateur station shall prove that he is able to
send correctly by hand and to receive correctly by ear texts in
Morse code signals. The administrations concerned may, however,
waive this requirement in the case of stations making use
exclusively of frequencies above 30 MHz.

S25.6 (2) Administrations shall take such measures as they judge necessary to verify the operational and technical qualifications of any person wishing to operate the apparatus of an amateur station."

The second of these provisions is the appropriate place to begin this discussion.

9.2. The international Radio Regulations have the force and effect of a treaty. In considering what provisions should be included in the Radio Regulations, it is necessary to distinguish between the regulations that may be desirable for an administration to enact for the amateur service, on the one hand, and the regulations that it should be required to enact as a treaty obligation, on the other. Clearly, a higher standard of need applies in the latter case.

9.3. It is of fundamental importance to administrations as well as to radio amateurs that the amateur service be limited to operators who are qualified both technically and operationally. Amateurs share the radio spectrum with a myriad of other radiocommunication services, and share their relatively narrow bands with one another. They must be qualified to assume the responsibility for the safe installation and proper operation of their stations. They must possess the ability to intercommunicate with one another, to ensure that their equipment will not cause harmful interference to other services in normal operation, and to resolve such interference whenever it may arise. They must understand the obligations that arise from the privilege of operating radio transmitters.

9.4. The radio spectrum is an international resource. In addition, it is desirable for administrations to be in a position to accord recognition to licences issued to radio amateurs by other administrations, without having to bear the administrative burden of examining the qualifications of individual visitors. Therefore, it is indeed appropriate that the Radio Regulations continue to recognise the obligation of administrations to verify the operational and technical qualifications of its amateur licencees.

9.5. However, the Radio Regulations themselves are a poor medium for setting out the standards for these qualifications. Amendment of the Radio Regulations is too difficult, and such standards do not rise to the level of a treaty obligation. Under the new ITU structure, endorsing such standards may be appropriate at the level of the Radiocommunication Assembly.

9.6. We have examined Article S37, dealing with Operators Certificates for the control of aircraft stations and aircraft earth stations and Article S47 dealing with the control of ship stations, as well as Tables [S47-1] and [AR55B], as well as the other provisions relating to the aeronautical and maritime services.

9.7. We believe that these provisions may provide a broad model for the amateur service. The effect of these provisions is to, in effect, allow the international recognition of qualifications (and therefore may be relevant to the issue we raise in respect of the international recognition of amateur licences for temporary operation) and set out the topics on which the candidate must demonstrate knowledge.

9.8. The identification of topics goes a long way beyond the present provision in S25, but still allows each administration to set its own standard of knowledge of the specified topics. We would not see the specification going to the detail set out in CEPT Recommendation T/R 61-02, given the need to accommodate the requirements of different countries.

9.9. We see a difficulty in persuading a WRC to incorporate such a detailed provision in Article S25. An answer may be the incorporation by reference of the specification of the technical and operational qualifications required for licencing in the amateur service. We refer to Resolution COM4-4 and its annex and Resolution COM4-5 of WRC 95. As these Resolutions are so recent, we have annexed a copy of them.

9.10. That in itself raises an issue. Resolution COM4-4 and its annex draw a clear distinction between the incorporation by reference when the reference is non-mandatory and where reference may be made to 'the

latest
version" of a Recommendation, and where the reference is mandatory, in which case the reference has the same treaty status as the Regulations themselves. In the latter case the reference must be adopted by the Plenary
of the next competent WRC.

9.11. If we propose the incorporation by reference of the technical and
operational qualifications for the amateur service, do we wish them to be
mandatory or not? Is the fact that they exist enough to provide sufficient
pressure on administrations to have regard to them? There is much to be
said for the standards being mandatory, and under the present procedures of
the ITU as we understand them, while a change in the standard would require
the approval of a WRC Plenary, at least the drafting would be removed from
the WRC.

9.12. Turning now to S25.5 (RR 2735), in 1994 the IARU CW Ad Hoc Committee
concluded that it remains essential for radio amateurs using the bands below 30 MHz to be able to intercommunicate without regard to equipment or
language barriers, to ensure the orderly shared use of a limited resource.
This committee found that "[a]t the present time, the Morse code is the
only practical means of ensuring that all amateur stations possess this
capability for intercommunication." However, the committee "...does not
rule out the possibility that future technical developments may provide an
alternative means for ensuring that amateur stations can intercommunicate,
and that these new means could become sufficiently universal to obviate the
present requirement. Neither is the possibility ruled out, that as the spectrum requirements of other HF radio services diminish, there may be the
possibility for sufficient expansion to the frequency band allocations to
the Amateur Service, so that the need to retain the RR 2735 requirement
would become less compelling."

9.13. If we could assess the desirability of retaining the provisions of S25.5 solely on the basis of amateur service requirements in 1996, we might well conclude that little has changed since 1994 and the provision, therefore, should be retained. However, this is not the case. World Radiocommunication Conference agendas are very crowded. There is talk of certain items now scheduled for consideration at WRC-97 being dropped from that agenda for lack of time. It is unrealistic to expect that Article S25, having been placed on the agenda for WRC-99, will again be reviewed at another conference in the foreseeable future. Any changes to Article S25 that may be desirable in the next decade or two, must be considered now.

9.14. On that basis, the Committee has concluded that S25.5 should be removed as a treaty obligation of administrations.

10. The international recognition of the licences of visiting amateurs

IARU Discussion Paper 7/9

10.1. The IARU has identified as an objective the global recognition of amateur licences to permit operation by an amateur in the course of a visit to another country.

10.2. The European telecommunications organisation, CEPT, has adopted CEPT Recommendation T/R 61-01 establishing the CEPT amateur licence, and also Recommendation T/R 61-02, which addresses the harmonisation of examinations for amateurs.

10.3. Essentially, the CEPT approach is for each administration to recognise equivalent qualifications from other administrations. The CEPT licence depends on equivalence, and it really exists from a series of bilateral agreements.

10.4. More recently, on 8 June, 1995, the Inter-American Convention on an International Amateur Radio Permit (IARP) was unanimously approved at the General Assembly of the Organisation of American States (OAS) in Montrois, Haiti. The IARP is similar in concept and nature to the International Driving Permit.

10.5. In the preamble to the Convention the OAS said "it is convinced of the benefits of Amateur Radio" and agreed "to promote, by all means within its power, the continuing development of telecommunications in the countries of the Americas."

10.6. We quote from the preamble to the Convention:

"While reserving its sovereignty over the use of the radio spectrum within its jurisdiction, each State Party agrees to permit temporary operation of amateur stations under its authority by persons licenced by another State Party without further examination. State Parties recognise the International Amateur Radio Permit (IARP) issued under the conditions specified in this Convention"

10.7. Article 3 provides:

"The IARP will be issued by the permit holder's home Administration, or to the extent consistent with the home country's domestic laws, under delegated authority by the IARU organisation of that State Party. It should conform to the standard form for such permit which is contained in the appendix to this Convention"

10.8. While the IARP provides for temporary operating permission, it does not cover the importation, or movement across national borders, of amateur radio equipment.

10.9. CEPT permits non CEPT countries to issue CEPT licences. A UK licence, for example, permits the holder to operate under the CEPT conditions in New Zealand. The CEPT arrangements have this effect: a country in the Americas that is party to the CEPT arrangement grants a right to operate in its country to amateurs from the CEPT countries in return for its amateurs having a right to operate in those countries. On one view of the CEPT arrangements, the amateur from the Americas country does not thereby acquire a right to operate in, for example, a Pacific country that has also become party to the CEPT arrangements, nor do amateurs from the Pacific country enjoy any right to operate in the Americas country. We appreciate that at least one administration interprets the arrangements differently, but it does at least highlight the difficulty of achieving a true international recognition of amateur licences.

10.10. The CITEL arrangements apply only to the OAS countries who have become party to the treaty.

10.11. There is no regional telecommunications organisation in Regions 1
and 3 equivalent to CITEL. CEPT is essentially a Western European organisation, not a regional organisation, and does not effectively encompass Africa, where there are some 55 countries. In Region 3 the Asia-Pacific Telecommunity (APT) is developing. Again, this is illustrative
of the difficulty of achieving a true international regime without recourse
to Article S25.

10.12. We consider that there is a need for the Radio Regulations to provide a basis for the global recognition of amateur licences issued by
all administrations to permit amateurs to operate while visiting.

10.13. CEPT and CITEL provide two quite different models. We doubt, even if
it was appropriate, that the ITU would be able to provide a mechanism whereby equivalent qualifications would be identified. We also have to recognise that whatever is proposed to be inserted in the Radio Regulations
must be simple and respect the sovereignty of the member countries of the
ITU. The formulation of such a provision is not easy.

11. An unnecessary restriction?

11.1. The present regulations include the following provision:

S25.1 1. Radiocommunications between amateur stations of different countries shall be forbidden if the administration of one of the countries concerned has notified that it objects to such radiocommunications.

11.2. That may make it a breach of the law of one country if an amateur of
that country communicates with an amateur in a country if the administration of that country has notified that it objects to its amateurs
engaging in international communication.

11.3. We suggest that this could be replaced by a provision that provides,
in effect, that Article S25 does not oblige an administration to authorise
amateur stations under its jurisdiction to engage in international communication except for distress and safety communication.

12. The provisions of S25 affecting the amateur-satellite service

12.1. The definition of "Amateur Satellite Service" is

S1.57 Amateur-Satellite Service: A radiocommunication service using space stations on earth satellites for the same purposes as those of the amateur service.

12.2. "Space stations" are defined by the Radio Regulations as a "station located on an object which is beyond, is intended to go beyond, or has been beyond, the major portion of the earth's atmosphere."

12.3. The Regulations define "satellite" as "a body which revolves around another body of preponderant mass and which has a motion primarily and permanently determined by the force of attraction of that other body."

12.4. In the definition of the "amateur satellite service" the term "space stations" is qualified by the phrase "on earth satellites." That definition may be contrasted with, for example, the definition of "Broadcasting-Satellite Service" as "a radiocommunication service in which signals transmitted or retransmitted by space stations are intended for direct reception by the general public."

12.5. Why should that qualification be incorporated in the definition? We wonder whether the words "on earth satellites" could in the future be restrictive.

12.6. We suggest that the following change to the definition could be considered:

S1.57 Amateur-Satellite Service: A radiocommunication service using space stations for the same purposes as those of the amateur service.

IARU Discussion Paper 8/9

12.7. We seek views, particularly from the satellite community, as to whether seeking such a change is justified.

12.8. The other provisions of S25 dealing with the amateur-satellite service, which are section II of the Article, are:

S25.10 S6. The provisions of Section I of this Article shall apply equally, as appropriate, to the amateur-satellite service.

S25.11 S7. Space stations in the amateur-satellite service operating in bands shared with other services shall be fitted with appropriate devices for controlling emissions in the event that harmful interference is reported in accordance with the

procedure laid down in Article S15. Administrations authorising such space stations shall inform the Bureau and shall ensure that sufficient earth command stations are established before launch to guarantee that any harmful interference which might be reported can be terminated by the authorising administration (see No. 22.1).

12.9. Some may question is why is there a separate satellite service, rather than a single amateur service. We believe that the structure of the Radio Regulations, for example the general provisions applying to all Space Radiocommunication Services found in S22, make the present structure necessary and appropriate. The separate definition of the service may have the advantage that it puts beyond doubt the right of the amateur service to use space stations.

12.10. S25.11 has a number of elements. It must be read having regard to at least two other provisions. One is the general provision S22.1:

Space stations shall be fitted with devices to ensure immediate cessation of their radio emissions by telecommand, whenever such cessation is required under the provisions of these Regulations.

12.11. Another is the present footnote S5.282 (previously numbered 664), which applies to the most used amateur satellite bands above 146 MHz and which, in part, provides:

... the amateur-satellite service may operate subject to not causing harmful interference to other services operating in accordance with the Table ...Administrations authorising such use shall ensure that any harmful interference caused by emissions from a station in the amateur-satellite service is immediately eliminated in accordance with the provisions of S25.11 ....

12.12. The effect of the footnote is to make the amateur satellite service secondary to the secondary, as well as to the primary, services in these bands.

12.13. There are two views with regard to S25.11. One view is that any approach to change S25.11 could be counter productive, as essentially it is a reasonable provision. The other view is that S22.1 is sufficient and that S25.11 is redundant and should be deleted.

12.14. There are also two views with regard to S5.282, which in any case cannot be addressed except in the context of an allocation conference. One is that the position of the amateur-satellite service would be strengthened by the addition of these bands into the body of the Table of Frequency Allocations. The other is that such a change would be purely cosmetic unless an upgrade in relative status also could be achieved, which would be very difficult without supportive sharing studies that might result in undesirably severe power flux density limitations on amateur satellite operations.

12.15. We invite the satellite community and others interested in this area to assist us with their views on the matters we have discussed.

13. Conclusion

13.1. All of the members of the Committee have carefully examined Article S25 and have fully participated in the preparation of this Paper.

13.2. Our effort will be justified if this paper leads to informed debate of the treaty provisions that administration accept to regulate the amateur services.

13.3. We cannot stress too much the importance of the communication of comment and suggestions to the Committee.

ANNEX

RESOLUTION COM4-4

REFERENCES TO ITU-R RECOMMENDATIONS IN THE RADIO REGULATIONS

The World Radiocommunication Conference (Geneva, 1995),

considering

a) that, as part of its simplification of the Radio Regulations, the Voluntary Group of Experts proposed that a number of operational, technical and administrative provisions be transferred to

ITU-R Recommendations, with their current treaty status maintained through use of incorporation by reference;

b) that the 1995 Radiocommunication Assembly approved 21 ITU-R Recommendations containing the provisions noted in considering a);

c) that only some of those Recommendations have been incorporated by reference by this Conference;

d) that those remaining Recommendations which have not been incorporated by
reference should be considered by a future conference;

e) that principles of incorporation by reference have been adopted by this
Conference (see Annex hereto);

f) that there are provisions of the current Radio Regulations which employ
mandatory incorporation by reference but fail to make explicit reference to
the ITU-R Recommendations incorporated;

g) that, by Resolution ITU-R 38, the 1995 Radiocommunication Assembly established a special committee to address the review of regulatory/procedural matters,

resolves

1 that the texts of the newly adopted ITU-R Recommendations must be studied
and compared with the Radio Regulations to ensure that they are satisfactory;

2 that, in view of considering f), the provisions of the Radio Regulations
which use mandatory incorporation by reference should be studied in order
to determine whether they require modification pursuant to the principles
adopted by this Conference,

urges administrations

to review the ITU-R Recommendations and the provisions of the Radio Regulations employing incorporation by reference in light of resolves 1 and
2 above,

instructs the Director of the Radiocommunication Bureau

to arrange for appropriate studies to be conducted by the new special committee established by the 1995 Radiocommunication Assembly to address
the review of regulatory/procedural matters and for the committee to report
the results of those studies to the 1997 Conference Preparatory Meeting.

ANNEX TO RESOLUTION COM4-4

Principles of Incorporation by Reference

1 No restrictions are necessary on the inclusion of references where these
are non-mandatory. In such cases, reference could be made to "the latest
version" of a Recommendation.

2 Mandatory references to resolutions or recommendations of a world
radiocommunication conference (WRC) are acceptable without restriction,
since such texts will have been agreed by a WRC.

3 Where mandatory references are suggested, and the relevant texts are
brief, the referenced material should be incorporated in the body of the
Radio Regulations.

4 If, on a case-by-case basis, it is decided to incorporate material by
reference on a mandatory basis, then the following provisions shall
apply:

4.1 the referenced text shall have the same treaty status as the
Regulations themselves;

4.2 the reference must be explicit, specifying the specific part of the
text (if appropriate) and the version or issue number;

4.3 the referenced text must be adopted by the Plenary of a competent
WRC,
but should not be part of the Final Acts;

4.4 all texts incorporated by reference must be readily available, by
being
published in a separate volume;

4.5 if, between WRCs, a referenced text (e.g. an ITUR Recommendation)
is
updated, the reference in the Radio Regulations shall continue to
apply to
the original version until such time as a competent WRC agrees to
incorporate the new version of the reference. The mechanism for
considering
such a step is given in Resolution COM4-5.

RESOLUTION COM4-5

REVISION OF REFERENCES TO ITU-R RECOMMENDATIONS INCORPORATED BY
REFERENCE
IN THE RADIO REGULATIONS

The World Radiocommunication Conference (Geneva, 1995),

considering

a) that the Voluntary Group of Experts on simplification of the Radio Regulations (VGE) proposed the transfer of certain texts of the Radio Regulations to other documents, especially to ITU-R Recommendations, using
the incorporation by reference procedure;

b) that, in some cases, the provisions of the Radio Regulations imply an
obligation on Members to conform to the criteria or specifications incorporated by reference;

c) that references to incorporated texts shall be explicit and shall refer
to a precisely identified provision;

d) that, taking into account the rapid evolution of technology, ITU-R may
revise the Recommendations incorporated by reference at short intervals;

e) that revised and approved Recommendations will not have the same legal
force as the initial Recommendations, incorporated by reference until a
competent world radiocommunication conference has so decided;

f) that it would be desirable to ensure, in the cases provided for in the
Radio Regulations, that the provisions reflect the most recent technical
developments,

resolves

1 that each radiocommunication assembly shall communicate to the following
world radiocommunication conference a list of the ITU-R Recommendations
incorporated by reference in the Radio Regulations which have been revised
and approved during the elapsed study period;

2 that, on this basis, the WRC shall examine those revised Recommendations,
and decide whether or not to update the corresponding references in the
Radio Regulations;

3 that, if the WRC decides not to update the corresponding references,
ITU-R shall continue publishing the ITU-R Recommendations currently
referenced in the Radio Regulations;

4 that WRCs shall place the examination of Recommendations in conformity
with resolves 1 and resolves 2 of this Resolution on the agenda of future
WRCs,

urges administrations

to participate actively in the work of the ITUR study groups and the radiocommunication assembly in the revision of those Recommendations to
which mandatory references are made in the Radio Regulations.

UK/USA Amateur Radio Figures 1995
==========

Population No of Hams Increase/ decline
UK 1994 60,000,000 62,000
USA 1994 250,000,000 631,600

UK 1995 60,000,000 60,000 -2,000
USA 1995 250,000,000 672,600 +41,000

UK 1 ham per 1,000 population
USA 3 hams per 1,000 population

Based on the USA figure we would have 180,000 hams in the UK.

UK/USA Radio Society Membership
==========

1990 1995 Increase/decline
RSGB Membership 35,000 30,000 -5,000
ARRL Membership 156,000 172,000 +16,000

5,000 x 30 pounds means 150,000 pounds loss of income
in the last 5 years to the rsgb.

The ITU DSI report states 'The number (of radio amateurs is growing)
at a steady rate of 7% per annum '. This would mean we should
have a yearly increase of around 4200 here and that is not hap
pening instead we have a 3% fall.

RSGB have lost 10,000 members in 9 years.

The highest membership of RSGB was 1987 with over 37,600 members
now it is down to 28,500 a loss of nearly 10,000 members in 9 years.

The loss is about 1,000 members per year for the last 9 years
with a loss of revenue of 300,000 pounds (10,000 X 33).
thats 3 million pounds over 10 years.

RSGB membership figures (when available) taken from the RSGB Annual
Report
==========

April1996 28,500
June 1995 29,805
June 1994 30,916
June 1993 31,018
June 1992 32,416
June 1991 34,581
June 1990 35,225
June 1989 35,868
June 1988 36,809
June 1987 37,601

P.S. In the RSGB Annual Report Peter Kirby G0TWW RSGB General Manager
states 'Membership has shown a modest increase....'
news to me I thought 29,805 was a decrease from 30,916!
When asked the RSGB always seem to say the membership has

increased
its a pity the figures don't show that.

1157. rsgb making disabled pay

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-17 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <3215dc62.1380149@news.demon.co.uk>
Source record: 218720
Cross-posted to: uk.radio.amateur,rec.radio.amateur.policy,rec.radio.amateur.misc

to make the disabled pay for rsgb failures is quite unacceptable.
the 270,000 pounds loss last year and the 10,000 loss in members over
the last 10 years is
now causing rsgb problems, so what do rsgb do? make the disabled pay.
rsgb are losing 360,000 pounds per year in lost revenue
who will be next, the blind?
is the rsgb in a worse state than people thought?
rsgb are quite happy to let loyal members have free membership.
the best thing concerned people can do is write to the society's
patron
hrh prince philip, buckingham palace, london informing him of the
new change in policy and ask if he supports it.
i am sure the policy can be overturned.
i wrote to hrh about the novice licence and a few months later
we got a novice licence.

the following is the letter from the rsgb general manager g0tww

CONCESSIONARY MEMBERSHIP-CHANGE OF POLICY.

Following a review of concessionary membership the council of the
society has
reluctantly taken the decision to change the policy of free
concessionary
membership with effect from the 1st September,1996.

This decision has not been taken lightly but the Society is comming
under
increasing financial pressure to provide the full range of services
which the
membership currently enjoy.

This, coupled with the increasing work load the Society is faced with
in
protecting the privileges the amateur radio community enjoys
with the
UK,Europe and internationally,has prompted this change of policy.

The Society will continue to offer concessionary membership to the
diabled but
at the rate of 18 per annum which can be paid anuually by
cheque,standing
order or direct debit,or be paid quarterly by direct debit.

The Society will also continue to provide home visits for the RAE and Morse Testing free of charge to those whose disabilities prevent them travelling.

Further,free concessionary membership and free Radcom on tape will continue for thoes members who are registered blind.

As I have stated earlier this decision has not been taken lightly and we are very much aware of the financial pressure this will place on some of our existing disabled members.

Althourgh this change will come into effect on the 1st September yiu will not receive an invoice for payment until the anneversary of you join date.

The Society fully appreciates your past support and sincerely hopes it will continue despite this change in policy.

Kind regards

Yours sincerely,

Peter Kirby, G0TWW
General Manager.

John-

You did very well and it is very much appreciated by this technophile. The only reason I jumped in to fray was to relate my personal experience with PacBell in S.F., where power outage by PG&E was widespread; and the fact that PacBell held up with exemplary fashion. The charge of telco failures was uncalled for as I saw it.

Would you mind telling us how long initial 48V battery backup can run and when do deisel generators kick-in?

I think this would "clear a lot of cobwebs" about how telco systems provide such reliable service.

QST de W1AW
Propagation Forecast Bulletin 34 ARLP034
From Tad Cook, KT7H
Seattle, WA August 16, 1996
To all radio amateurs

SB PROP ARL ARLP034
ARLP034 Propagation de KT7H

Average solar flux was down about five points over the past week. Flux values are expected to stay quite low, and rise up above 70 next week around August 22. After that it should peak around 76 on August 29, and be back to 70 around September 4. No big upsets are expected, but there could be some minor geomagnetic activity around August 27.

The Fall equinox is about five weeks away, and the days are gradually getting shorter. 40 meters is the best nighttime band for worldwide propagation, while 20 is best during the day. We are still suffering from very low solar activity at the bottom of the current solar cycle, so MUFs are depressed. Expect big improvements over the next two years.

The September issue of QST has an informative article by N6BV on advanced propagation prediction software. An interesting one is VOACAP, created for Voice of America, and available free from the federal government via the web at http://www.voa.gov. Click on Other Services, and then Software Distribution after the opening screen.

Sunspot Numbers for August 8 through 14 were 24, 20, 33, 30, 22, 16 and 30, with a mean of 25. 10.7 cm flux was 69.8, 70.2, 72.8, 72.9, 70.1, 69.6, and 68.8, with a mean of 70.6.

I'd love to see a worldwide posting of nets - that would be quite a job.

The ARRL sells a NET DIRECTORY which is updated yearly. That covers all (well, most) of the nets which run regularly in the US - HF and VHF as well.

Let me know if you find other resources for HF nets.

[hope you don't mind my not re-posting this entire thread for you]

Since I let out my "yelp" about Telco being tarred with a broad brush and the implication made that the phone system failed during the power outage, a lot of good press has shown up here. I'm pleased to see that virtually every report seemed to confirm my experience that phone service came through it well. Thanks.

Peter Coffee AC6EN, responded well to my gripe, too. His statement was regarding his own experience with another phone company, not Pacific Bell.

I want to say again that I don't want to detract from Peter's message that Los Angeles County Disaster Communications Service did a really good job during the blackout. I'll have to admit I was chuckling to myself at the control operator asking for reports from Sheriff's stations about where the power was out. He could have done it much faster if he had asked them which areas had POWER ON. That was a short list.

Now that I've whined that phone service is so good, I'll probably end up eating crow when Murphy's law comes to get me.

73 and thanks to all the posters,
John Minger, AC6VV (DCS Z-148)

Hi everyone

Has anybody purchased and put togather one of thos 2 mtr. mobiles that TENTEC sells you in a kit? All the articles I have read say all a person needs is a VOM and some time on there hands. If anyone has taken the challenge and bought one of these rigs let me know if the time and effort that it takes to assemble the thing is worth it. I know you can buy lot's of used gear for around the same price it'll cost for the kit but it's the joy of building it that has caught my interest.

Thanks Bob

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site for hams to post their request for over-the-air schedules. Included in the posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted.

Visit http://www.sarrio.com and participate in your first cybersched.

>start making the measurements.

The official limit is based on NCRP 86 and ANSI C95.1-1992.
You are correct that people with indoor antennas are probably
in somewhat of a bind. However, don't forget that the standard
requires a 6 minute *average* for controlled exposures and a 30
minute *average* for uncontrolled exposures. Given the duty cycle
of typical amateur operations, this is an escape clause for many
amateurs. Old timer AM operators who talk 10 minutes at a stretch
with their plate modulated kilowatts are in trouble, but the average
SSB operator probably doesn't have a high enough duty cycle to break
the limit *on average*, first due to the peak to average power
ratio of SSB, and second due to the quicker back and forth nature
of the conversations typically held on SSB.

I've compared the calculated exposures I posted earlier with the
FCC measurements made at a number of amateur stations. My calculations
seem to give distance numbers that are about 30% pesimistic compared to
the FCC's actual measurements. (Of course my assumptions for those
calculations were intended to be conservative.) But that's encouraging.
The FCC only found stations breaking the limits when they used ground

mounted verticals, open wire fed flattops, and a quarterwave whip
on a car.

I think Sumner's contention is for the most part correct. High
power AMers and RTTY operators may have something to fear, but
most of us are going to squeak through. I'm more concerned about
what this is going to mean for access to good repeater sites.
We're dealing with combined exposures here, and the fields
could be very high, and with a high duty cycle. This may
affect maintenance access to sites in such a way that amateurs
may be denied access simply because it would be too inconvienent
to the paying customers if they had to shut down while work
was done at the site. "Moonsuits" may be an answer, but I don't
relish having to wear one of those on the tower.

>
>Rob Neff (N7ORY)

There is a chart. It is on page 96 of the report and order. It shows the controlled exposure power density in the 10m band to be 900/f, or about 30 mW/cm^2, and the uncontrolled exposure to be 180/f, or about 6 mW/cm^2.

Now to get down to that level, the RF field from a 100 watt isotropic source would have to expand to a sphere of surface area 100 watts/.03 watts/cm^2, or 3333.33 square centimeters. The formula for the surface area of a sphere is A=4*pi*R^2. We know A and want R, so we rearrange the formula to R=sqrt(A/(4*pi)). That gives a value for R of 16.29 centimeters. So, if no part of your antenna comes within 16.29 centimeters of you or your immediate family, you're Ok for power density.

You can repeat the calculation for uncontrolled exposure by using 6 mW/cm^2 instead. That's an area of 16666.67 square centimeters and a R of 36.42 centimeters. So if no member of the public can approach any point on your antenna closer than 36.42 cm, you're Ok on power density.

Note, since your antenna is not an isotropic source, this is a conservative calculation. Actual exposure will be less since all of your power won't be concentrated in the single point on the antenna closest to you. To get the real value, which will be lower, you'll have to use an antenna modeling program. However, since the safe distance is so short, that shouldn't be necessary.

Note also that a gain antenna will have different safe distances in different directions. You'll need more detailed calculations to determine actual safe distances with a gain antenna. In every direction except the axis of the main lobe, the safe distance will be less than for the isotropic case (disregarding strong sidelobes). In the main lobe, the safe distance will be greater than for the isotropic case.

Ok, now we need to look at the magnetic field exposure. For
10m, the limit is 4.89/f or 0.163 A/m for controlled exposures.
To calculate *far field* exposures, we note that the impedance of
free space is 377 ohms. P=I^2*R, so the power density in watts/meter^2
to express a current of 0.163 A/m is 0.163^2*377 or 10 watts/meter^2.
We can plug that into the first calculation like this,

100 watts/10 watts/m^2 = 10 m^2.

That's our A. We can now use R = sqrt(A/(4*pi)) and find that we
need to be at least 0.89 meter from the antenna to be within the
controlled exposure limit. But note that 0.89 meter is *not* in
the far field of the antenna.

The uncontrolled exposure limit for 10m is 0.073, so the minimum
safe distance for the general public is 2 meters. But note that
2 meters is *not* in the far field for a 10m signal.

(Rule of thumb, far field calculations are only valid when you're at
least 10 wavelengths from the antenna.)

The third limit is the electric field strength in volts/meter. For
10m, the limit for a controlled exposure is 1842/f or 61.4 volts/meter.
The impedance of free space is 377 ohms. P=E^2/R, so the power density
in watts/meter^2 needed to express 61.4 volts/meter across 377 ohms is
61.4^2/377 or 10 watts/meter^2. We can plug that into the first calculation
like this, 100 watts/10 watts/m^2 = 10 m^2. That's our A. We can now use
R = sqrt(A/(4*pi)) and find that we need to be 0.89 meter from the
antenna to be within the controlled exposure limit.

I'll leave the uncontrolled exposure limit as an exercise. All you
need to know is that the limit is 824/f. (Actually, all you need
to notice is that the safe distance for the electric field is the
same as for the magnetic field.)

But note again that this is only valid in the *far field*.

Because the safe distances we're getting here for the far field assumptions
are *not in the far field*, there are near field discrepencies not accounted
for. These can be serious as we'll see below.

For example, the Rrad of a dipole is roughly 50 ohms (would be 73 ohms
in free space). At 100 watts, that gives a feedpoint current of 1.414
amperes. The magnetic field declines inversely with distance in the
near field (not the inverse square as is the case for power). So 1.414/0.163
= 8.67 meters. That's the near field safe distance from the current node
in the antenna for the controlled magnetic field exposure. For the
uncontrolled exposure, the minimum safe distance is 19.8 meters. Similarly,
for the electric field, the safe distances are the same, but from the
antenna voltage nodes (the ends for a dipole) instead of the feedpoint.

Now that places the safe distance at about 66 feet for the general
public. That's very different from the 2 meter safe distance we got
with far field assumptions. So why show the far field calculations?

Because at VHF/UHF where the far field is a comparatively short physical distance from the antenna, and where exposure limits are much tighter, the far field values can dominate, especially in the gain antenna case. You need to run both sets of numbers. If the far field numbers actually fall in the far field, use them. Otherwise use the near field numbers.

Note that at HF, particularly lower HF, the near field magnetic field numbers are the ones of concern. It is possible to measure this magnetic field directly with a fairly simple instrument. You should do this to find and map any hot spots. At VHF+, there is no reliable instrument to measure the magnetic near field. Electric field measurements can be done instead since they'll work out to the same distance (except from the element ends instead of their centers). This isn't quite as easy to do, however, because there are more potential sources of error in this measurement. But direct power density readings also become possible at UHF+, and relatively simple instruments can be used to do that to a fairly high degree of confidence. Once you have any one of these numbers, you can derive the others at least to an outer bound.

>battery packs!

There is documented evidence that exposures of greater than 10 mW/cm^2
can cause harm. In particular, cataracts or loss of focal flexibility
due to RF heating of the lens of the eye, and in some cases cancers.
Just as some people get away with smoking cigarettes for years without
getting lung cancer, some people can get away with excess RF exposures
for years without apparent harm. But statistically, the rate of cancers
does increase with exposure in large populations. Milham found a doubling
of cancer rates (compared to the rates of the general population) for some
cancers in his study of deceased amateurs.

The frequencies where (RF heating) exposures are most harmful to humans
are in the range 30-300 MHz. That's why the standards require a lower
exposure at those frequencies than at lower or higher frequencies. The
reason for that is those frequencies are the ones which couple most
strongly to the human body. That doesn't mean we can treat exposures

at other frequencies casually, but the evidence does indicate that higher or lower frequencies don't couple as strongly to the body. Therefore a higher exposure limit for them is tolerable.

The new MPE is 1 mW/cm^2 in the 30-300 MHz region. That gives at least a 10x safety margin (actually, the margin is probably greater than that since 10 mW/cm^2 is about the lower bound for noticable RF heating effects). At 100 mW/cm^2 and higher, however, effects can be very noticable very quickly. There are documented cases of amateurs being blinded by such exposures, literally overnight. (There is also industry evidence, in particular the IBEW has a case file on this.)

Athermal effects, IE effects which aren't a result of RF heating, are a bit more questionable. There are population studies which go either way on this. If there are effects, they appear to either have a weak statistical association, or have to be coupled with an as yet unidentified co-factor. Something appears to happen in some people, but the mechanism isn't understood yet. Athermal effects have been most noticed at lower frequencies, particularly when those frequencies are pulsed at a low rate, IE in amateur radio that would correspond to OOK Morse style signals. In vitro studies have shown changes at the cellular level when exposed to fairly weak pulsed RF fields. In particular, pulse rates in the 5-10 pps range have been shown to cause abnormal chromosome division. This is usually taken as an indication of a cancer causing agent at work.

He shouldn't have to. Either his department issues him one, or he should buy one for himself and not be so cheap. Lots of public radios being advertised on rec.radio.swap.

When you modify your 2M radio to xmit out-of-band it's *imperative* that you put the radio on a spectrum analysizer to insure you're not going to cause trouble for other services. But why even do the mod? By telling the world you've done this you're telling us you're able to justify breaking federal law, and that you're too cheap to buy a radio designed for such comms.

:>kd6fvj@best.com

Someone sure does Scott, AEA is the company you want to talk to.
PcPakratt for Windows is not free ware or shareware. And they are
pretty slick at the hidden Registration info in the software. A decent
programmer can get around it but I sure wouldn't recommend it.
Far better to pay the price and get the book along with support. There
will be quite a few things you run into that are only in the book. Of
course if you have someone that can help you along the way because
they have the book and some experience....

De N5EJS
Russ

I like manuals because they are like an open-book test. You can always
make an "A" if you look in the right place.

There are several... WB2JKJ, The Radio Club of Junior High School 22
NYC 516-674-4072

WB2MGP is an educator..look her up in the call book. She gives talks
about radio at conventions.

Jim Stafford, W4QO and The Metro Atlanta Telephone Pioneers have a
group that assist schools bring up and use amateur radio. One he
helped got a donation thru a SK for a 2 meter station and an HF
station. He is in the call book and was Herb Brier Instructor of
the year several years ago.

NYc Schools have a book and a radio course that is taught.

Does anyone have an inexpensive ($10 - $20) dummy load suitable
for use with my TS-820? Like maybe an old Heathkit or
something along that line?

Prefer dry type (or drained of oil so it can ship).

I don't need anything at all fancy - no meters, switches, tuners, etc.
built-in. Just 50 ohms at 100+ watts.

Let me know if you have anything!

georgehe@unix.asb.com () wrote:

>How about volunteer firemen who use their ham gear for their
>part in the fire service ?

I guess there are a few that might do that over there where you are but
I wouldn' t know about that, George. All the firemen here are paid government
employees, no volunteers. Government gives them radios, I guess.

>So, whats ARES/RACES all about in your neck of the woods ?

We don't have ARES/RACES here. The only 'major' disaters we have are typhoons,
and most hams need to stay home and take care of their families while those are
going on. We had one guy here who was the ARES coordinator for a few years,
but he never could find anybody to coordinate. With the wind blowing 200 mph,
there isn't much to do anyway, except sit around and wait for it to stop
blowing. When the typhoon is over, everyone on the island helps everybody else
pick up the tin and nail it back on the closest house to where it landed, and
those type of activities don't require much radio communications either, I
guess.

I was reading about the emergency communications during the power outage in
California in another thread, but power outages here aren't emergencies, they
are just an every day occurance, so don't need any communications during them
either. If a power outage here was an emergency, we'd be in emergency status
more that normal status. 8-)

Anyway, George, now that you've got me thinking about it, I guess we don't have
ARES or RACES over here because there just isn't much for them to do.....

At one time a license was require but I guess the goverment
decided that the cost of licensing and enforcement was
not worth it. Now anybody can work any transmitter they wish,
the owner of the transmitter is liable for their equipment if
it causes interference. The only transmitters that still requires
a licensed technician is equipment mounted upon a sea going vessel.

1196. rsgb g0tww:Stop the knocking

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-17 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <3215e779.4219896@news.demon.co.uk>
Source record: 218800
Cross-posted to: uk.radio.amateur,rec.radio.amateur.policy,rec.radio.amateur.misc

Radcom April 1996

Stop the Knocking

I have noted in recent weeks the proliferation of anti-RSGB diatribe on the packet network. I know members will say this has been going on for years. But recently it seems to have become most fashionable to knock the Society and its work at every given opportunity. It must be extremely frustrating for the perpetrators that the Society does not respond in a similar vain.

To take one example of the criticism aimed at the Society , I recently read that the Society fails to take account the views of its members. Nothing could be further from the truth. Over the past two years the Society has held a number of regional meetings up and down the country. These meetings where open to both members and non-members, and gave detractors the ideal opportunity to put forward their views. With out exception theses meetings were very poorly
attended. At most of the large rallies and events we attend there is always a chance to take to task members of the HQ team, myself included, and members of Council and the volunteers Com mittees. Most people who take the time to talk to us are most supportive of the work of the Society.

I think at times members and non-members of the Society forget that the vast majority of the work carried out by the Society on behalf of the amateur radio community within the UK is done by volunteers. Over 2000 people work on a volunteer basis for the Society. Without the efforts of these dedicated people, amateur radio would have sunk without trace years ago.

All of us that hold a license and enjoy our hobby own them a debt of gratitude for their efforts. They certainly do not deserve the level of criticism aimed them by a few mis-informed mischief makers who have put their views across on the packet network, but do not have the courage to raise their views face-to face when given the opportunity.

Criticism of HQ staff is acceptable, because the staff and I are paid to service the needs of the membership. However such criticism should not be on packet network, because HQ staff - as professionals - are prohibited from using amateur radio to reply. If we are failing in our duties then I would welcome any constructive criticism in writing, back by facts and figures.

That would give me and the staff the opportunity to make any changes required to improve the service.

Misinformed criticism is unproductive and serves no purpose other than to create ill-feeling.I am sure that many thousands of amateurs are fed up as I am at the rubbish put out on packet by a few operators who feel the network is there solely to broad cast their views. Its time the knocking stopped, because in the eyes of the general pubic it does nothing to enhance the reputa tion of amateur radio which is already suffering enough from "external" sources.

By Peter Kirby G0TWW General Manager.

Anything's possible -- ask Beck, Rife, or Lakhovsky. (OK, Beck -- the rest are dead.) But if EM radiation does have non-thermal biological effects, my guess is that at an arbitrary frequency and power level it would be more likely to harm than help.

I have a Kenwood TH79A(D) for sale. It is in great shape, works perfectly. Comes with soft case and Kenwood hat. All docs, box and packaging. My wife and I use the TH28 and the mobile rig almost exclusively so I just dont need it anymore. This radio also has been modified with the "Wide Band" Modification by AA7RD. 400 dollars plus shipping in the Continental US only.

Hello I am trying to sell some Ham Radio Gear if you are interested
please look at the list below.

1 - Vectronics VCI300 Antenna Tuner - $225.00
2 - HF Vertical by Amtron for 15-10m - $20.00
3 - 2m Colinear VHF Vertical mobile or base - $20.00
4 - IPARN Manual includes all satellite codes - $5.00
5 - Canadian Advanced Study Guide - $5.00
6 - Beyond the Line of Sight VHF Guide - $5.00
7 - Getting started in Ham Satellites - $2.00
8 - Canadian Advanced Question Bank 3 1/2 disk Windows 3.1 - $5.00
9 - Various Coax Cables 50 ft long - $5.00

Please e-mail me with questions or concerns

Stu

1206. QST collection for sale

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-18 00:00:00 UTC
From: Derrick Belbas <ve4wnr@mb.sympatico.ca>
Message-ID: <321765E9.3E54@mb.sympatico.ca>
Source record: 218661
Cross-posted to: man.ham-radio,rec.radio.amateur.misc,rec.radio.amateur.swap

Hi. I've got a few QST magazines looking for a good new home.

In total, 445 issues, which include 7 from the 1930's, 37 from the 1940's,
77 from the 1950's, 38 from the 1960's, 87 from the 1970's, 118 from the 1980's, and
81 from the 1990's.

I'm asking $$ as follows:
for single issues, $5 each for 1930's,
$3 each for 1940's,
$2 each for 1950's,
$1 each for 1960's and 1970's,
$2 each for 1980's and 1990's.

Prices in Canadian dollars, postage extra if required.
Considerably cheaper for purchases of more than one issue.
$200 for the set.
Extremely flexible on prices.

Thanks.

The point, however, is that this IS just a guess. A great many things have non-thermal biological effects, but are not known to cause harm except with exposures high enough to cause acute, immediate harm. If we begin regulating exposures on the basis of mere biological effect in the absence of evidence of harm, we will have to regulate exposures to just about everything.

We are obviously bombarded with RF from natural sources every day of our lives, so humans (and all living things) must have evolved some rather potent defense mechanisms to prevent any harmful effects from these exposures (at least in the frequency ranges where natural RF is strongest). What is more, we are exposed to natural RF 24 hours a day, every day of our lives, whereas an amateur station produces RF only when it is transmitting.

Does anyone have a source for estimating the amount of RF exposure from natural sources (for example in the 3-30 MHz range), in comparison to any reasonable estimate of exposure from an amateur station? I admit that this is just a guess, but I would be very surprised if even the most active amateur exposed anyone to total levels of RF that were more than a fraction of those to which we are exposed from natural sources.

1210. MAKE MONEY

Newsgroup: rec.radio.amateur.misc
Date: 1996-08-18 00:00:00 UTC
From: Matt Baraga <m.baraga@worldnet.att.net>
Message-ID: <3217820A.58A2@worldnet.att.net>
Source record: 218665

Here's the kicker.

Would you miss a penny. No!
So, do you think 30,000 other people from across the world would either,
Probably not.
What if you got 30,000 people to send you even a nickel.
You'd be happy when all of there letters arrived.

It's amazing how it adds up!!!!!!

Now let's talk Dollars and not nickels and dimes.
Follow the three steps below and you'll make thousands possible up to
50 thousand.

1. Write your name and address on 5 different pieces of paper with the
words "Share the wealth".
Fold a $1.00 bill in each of the pieces of paper and mail them to
the following five addresses.

Jason Todland 174 Los Olivos Ave. Daly City Ca 94014 (USA)
Tod Mcknight 255 Eastoak St Seattle WA 32588 (USA)
Jeci C0/ Traci Marks PO Box 19549 Cinti, OH 45219-0549 (USA)
Matt Baraga 111 White Ibis Ct. Daytona Beach FL 32119 (USA)
Robert Byrne 6229 Donna Circle Port Orange Fl 32127 (USA)

2. Now, remove the 1st name on the above list, there will only be four
left then. Now, add you name and
as the fifth one (last!!!!!!).

3. Post this amended list with this article or one close to it to at
least 200 news groups (there are thousands).

How the above works:

It's simple, If you receive just 5 responses, each with a $1.00 bill
enclosed, you make $5.00.
Now, each person that sent you $5.00 will also be doing the above, and
will post letters with your name
at number four on the list, thus as more people read their postings, and
repost.....your name will be
redistributed and distributed again.
Now, it obvious that your name will be bumped off the list, but by that
time thousands of people will have
received it, and they will be sending thousands of dollars.

Why should you do it ?:

All you could loose is five stamps, five dollars, and a little time posting to the internet.
As long as you are honest and actually send five dollars when you start the process will remain continuous.
Look: if you have a two bugs and those bugs are each worth $5,000 and if you fed them they would
multiply into 10 bugs, would you deny them food. No, and you know why.
So this process needs the food
of each initial investors five dollars (you won't miss it) don't break the cycle.
If you can't be honest, you deserve to at least loose out on all of your time and effort on the internet.
You broke the process.

Is it legal:

Yes, you get something in return for your money, A list of addresses.
(So its not a chain letter)

Well, I didn't make this up. My home is served by GTE in the 310 area code. My cellular phone is an L.A. Cellular account with a 213 number. I was unable to complete local calls on the GTE line, or to place calls on the cellular phone, during the ten minute period immediately after our power went out. After that, I was too busy running a local emergency net to continue checking the landline.

>>much to ask. It may be the truckers and their buying power that ends up
>>saving ham radio.
>
>Hi Rik,
>What would these truckers be saving ham radio from?

There are only about 600,000 hams now I believe. Manu of them are old,
will not be around long. I don't see as much growth as I believe is needed
to insure sufficient use of the bands in the future. If we don't use them
we can lose them. Look at 220.

Our HF bands are not
>under attack and are as safe now as at any time in the past. We gained
>new bands during the last decade, and the government is considering giving
>us even more.

I agree. However, if the old farts on the bands keep acting like immature
cbers we may have a hard time defending our use if it ever comes under
attack. I am often embarressed to show a visitor what is going on on HF.

>You mention truckers' buying power. Are you implying that they'll keep
>the Big 3 radio makers in business?

Yes I am.

Not to worry, for if you look at
>the commercial line those 3 produce, you'll see their ham models appear
>very similar, and there is no indication their commerical sales are
>leveling off.

I have been in the commercial two-way business for thirty years. I can
tell you you are wrong here.

>Besides, if the amateur radio manufacturers stopped sales
>we'd have a resurgence in home building. And that would be *very* good
>for amateur radio.

It might be good but the bands would be quiet. We are a very small group
about to be thinned out by age. The gentlemanly, technical aspects are
being replaced by chaos and appliance operators. our vhf and uhf freqs are
coveted by many commercial concerns.

I hope you are right, but I fear the ham radio hobby is deteriorating like
many other aspects of our society.

>Jeff KH2PZ / KH6

I monitor 14.300 frequently. Maybe I'll run into you on the air some day.

Thanks for your comments.
